HARRISBURG, PA.—Very little more than last year. Supply of home-grown flowers was larger and of better quality. Retail prices were about same as last year. Increased call for blooming plants, especially for Harrisii lilies and white hyacinths. Increased call for loose flowers. Had difficulty in buying additional supply at prices that would allow a profit. The weather interfered with sales. By Saturday noon we had two feet of snow and this interfered with our hauling out plants, making delivery so difficult that it was impossible to fill all orders for decorating.

DAVENPORT, IOWA.—From 10 to 25 per cent larger than last Easter. Supply of home-grown flowers larger and better. Retail prices fully as good as last year and in many cases buyers did not hesitate to pay extra good prices for really fine stock. Large increase in call for blooming plants, especially for Harrisii lilies. Hardly any made-up work, call being almost entirely for loose flowers on long stems. Owing to the many orders for funeral work prior to Easter the supply of lilies and white carnations was rather short. Taking everything into consideration it was our most satisfactory Easter.

ST. PAUL.—About the same as last Easter. Supply of home-grown flowers compared favorably with last year considering the coldness of the date. Retail prices about same as last Easter. Probably not quite so many plants sold owing mainly to the bad weather. No made-up work—all loose flowers. Had plenty of flowers with the exception of hybrid roses and fancy carnations. On account of bad weather and miserable roads the Easter trade was hardly as satisfactory as in former years. The churches did not seem to decorate as generally as in former years and when they did, they wanted former prices discounted a good deal.

HAMILTON, ONT.—About 20 per cent larger than last year with greatly increased demand for first class stock. Supply of home-grown flowers compared favorably with last year as to roses, valley and bulbous stock, but Harrisii were hardly up to the mark. Retail prices about same as last Easter. Increased call for well flowered plants. Increased demand for loose flowers and less call for made-up work. There was a decided increase in the demand for palms and fine foliage plants for church decoration by all denominations. Yes. Perfectly satisfied with the Easter trade of 1891.

WILMINGTON, DEL.—One florist reports Easter trade as about the same as last

year and another as less. One reports supply of home-grown flowers as not so good as last year and another as about as good on most stock and better on quality. Retail prices were about the same as last Easter. One noticed an increase in call for blooming plants and another did not. The weather was very unfavorable. It snowed all day Friday and nearly all day Saturday. Had it not been for the unfavorable weather believe this Easter would have been most satisfactory one we have had as demand was good even under the adverse circumstances.

KANSAS CITY, Mo.—Much larger than last year, increase of from 20 to 50 per cent. Supply of home-grown flowers was larger and of better quality than at last Easter. Increased call for blooming plants. Further increase in call for loose flowers, very little for made-up work. The weather was very unfavorable all the week prior to Easter. It rained half the week and the remainder was cloudy, but in spite of these drawbacks the supply was large and quality good. People have all along been complaining about hard times, yet March 28 and 29 the demand for flowers and plants was enormous. Most satisfactory Easter we have had.

SPRINGFIELD, MASS.—Much larger than ever before, average of increase probably not less than 50 per cent. The supply of home-grown flowers was very large and the quality excellent. Retail prices lower than last year. Increased call for blooming plants and still further increase in call for loose flowers. But very few designs ordered. Boxes of choice flowers for gifts were in brisk demand and off-quality flowers or plants were not wanted. There was not enough Harrisii lilies to supply the demand and the stock of carnations was early exhausted. Blooming plants and palms were all sold out with the exception of a few azaleas. Competition among the retailers was sharp and prices were cut pretty close.

BUFFALO, N. Y.—From 25 to 30 per cent larger than last Easter. Supply of home-grown flowers was large and of good quality. Retail prices were quite as good as last year and a trifle firmer. Quite an increase in the call for good blooming plants, any quantity of choice plants could have been sold. A still further increase in call for loose flowers while the demand for made-up work has dropped to almost nothing. We had unusually favorable weather Saturday and Sunday. Taken altogether this was the most satisfactory Easter we have had here. Our experience this year has taught us that we ought to grow more and finer plants. Also that we can not depend on Eastern dealers on such occasions as their local demand takes all they have to sell.

RICHMOND, VA.—An increase of fully 25 per cent. The supply of home-grown flowers was large and of better quality than last year. Retail prices were a trifle lower on cut flowers and about the same on plants as last Easter. Increased call for blooming plants in general, though one florist noted a falling off in the demand for astilbe. The same florist noted an increased call for blooming plants arranged in baskets. In cut flowers buyers called for them loose—but very little made-up work. While it was more satisfactory than any previous Easter the trade would have been larger but for the bad weather. The week before Easter we had rain, hail, snow and wind. Still

the business on Saturday was the largest ever known here in spite of the rain which fell all day.

DES MOINES, IOWA.—The demand was immense, but as we didn't have the flowers were unable to fill our orders. Cloudy weather for nearly a month preceding Easter cut the supply exceedingly short. Some report sales as about equal to last year and others as less. One reports a decrease of 25 per cent in sales. But this was all due to the unfavorable weather and consequent short supply. Retail prices were about the same as last Easter. Perles and Niphetos retailed at \$1.20 a dozen, Mermets and La France \$1.50, carnations 50 cents, lilies 15 to 25 cents each. Demand was mainly for loose flowers in boxes, but little design or basket work. No increase in call for blooming plants, in fact some report a decrease. This was, however, undoubtedly due to the miserable weather. Large increase in the call for violets. The demand was satisfactory, but as we couldn't meet it we got no benefit from it.

MILWAUKEE, WIS.—An increase of from 5 to 25 per cent over last Easter. Regarding the supply of home-grown flowers one florist reports it as better in quality and larger in quantity and another as not so good as formerly and flowers scarce. Retail prices were about the same as last year. Increased call for loose flowers as against made-up work. One florist reports a decrease in the call for blooming plants, while another says, "As the supply of good plants was exhausted early we think the plant trade would have shown a large increase if we had had the plants to sell." The supply of flowers was decidedly short of the demand and could not buy to make up the shortage. The main rush comes in now during the last three days, which we used to take orders weeks ahead. However, taking everything into consideration, this Easter was the most satisfactory one we have had.

ST. LOUIS.—Larger than last year. Increase varied from 10 to 90 per cent with the various florists. One reports sales as nearly double those of last year, trade beginning four or five days in advance. One reports the supply of home-grown flowers as not so large as last year, while another reports the home supply as "Much better quality; all home-grown this year; last year bought about 25 per cent; this year sold considerable to the trade." One reports retail prices as about same as last year and another as much lower on everything but roses, which were a little higher. Unanimous regarding an increased call for blooming plants. Also unanimous as to increased call for loose flowers as against made-up work. So far as can be learned all depended upon the home supply. The dark weather that preceded Easter made roses scarce and a little off-color. Some report a largely increased call for spring flowers such as tulips, hyacinths, daffodils, etc. Taking every thing into consideration it was the most satisfactory Easter we have had.

EVANSVILLE, IND.—Total sales from 20 to 25 per cent larger than last year at about the same prices. The supply of home-grown flowers was larger than last year and the quality was good as a rule. There was an increased call for blooming plants, especially for Harrisii lilies. Cut flowers were nearly all sold loose, but little demand for made-up work. We could buy nothing at other

A CORNER AT THE RECENT EXHIBITION AT MADISON SQUARE GARDEN, NEW YORK.

points that could be shipped and reach us on time. One florist placed orders a week ahead for roses and carnations, but the commission man could not get hold of the stock in time to reach this city by Saturday. No doubt the demand would have been much larger but for the miserable weather. The week preceding Easter was one of almost constant rain and up to Friday afternoon there were but few Easter orders received, and as a consequence we were compelled to force a week's sales within two days. The commission men could promise us nothing as the growers for some reason—good or imaginary—would neither sell anything or give any information as to what the supply would be. Such a state of affairs makes one more determined than ever to be independent of them, and when his own stock is exhausted quit selling and let the excess demand remain unsatisfied.

Boston.

There has been plenty of activity in the cut flower trade since Easter. There are a great many fine roses in the market, especially hybrids and Jacqs, which are bringing good figures and selling well. Carnations are somewhat scarce and bring almost as much as at Easter. Of smilex there is but little obtainable and that is poor, but there is an abundance of *Asparagus plumosa* which is more than a substitute for it.

The new crop of *Adiantum* fronds is now in, and they are abundant again. Pansies are good, in fact the general supply of them seems to improve in quality every year. Violets are still with us, but there are indications that the end is ap-

proaching. Lily of the valley, tulips and narcissus in sorts are obtainable in any quantity. Spring weather having settled down in earnest, the street fakirs are swarming, and it is surprising to note the enormous quantities of flowers they manage to work off in a few hours.

There is a rumor of a new wholesale commission house about to be established in the city.

Mr. S. J. Coleman, who has been foreman and general manager for Mr. C. J. Power, of South Framingham, for the past ten or twelve years, is leaving him to take a similar position with Mr. J. M. Galvin. Mr. Coleman has the reputation of having raised the finest chrysanthemum blooms ever seen in Boston, and he has also made a steady success in the culture and sale of bulbous flowers. Mr. George Stevenson succeeds him at the Powers establishment.

On Saturday, April 11, Col. Henry W. Wilson will lecture before the Massachusetts Horticultural Society on the "Horticulture and vegetation of the Bahama Islands." The committee on revision of by-laws of the Horticultural Society reported at the quarterly meeting, April 4. There were two reports, the majority report making no material changes from the original by-laws excepting the introduction of the Australian ballot system of voting at annual elections, and the minority report recommending further that the secretary and treasurer be elected by the society instead of being appointed by the executive committee as at present. The majority report was passed to its second reading, and in accordance with the rules lay over till the July meeting for final action.

W. J. S.

Philadelphia.

When one considers the weather the Easter business here was good, very good. There were but two clear days, and these in the early part of the week. Thursday it was cold and chilly, Friday it rained all day, turning to snow at night, and Saturday there was from three to six inches of snow on the ground; it finally cleared off about noon, and then the people made the last grand rally, and when the field was looked over Sunday morning there was really very little salable stuff left.

The storm interfered to a considerable extent with the "speak easies." There were quite a number of these places set up like side shows to the circus, hoping to catch the stragglers when the big show was full, but the weather was "agin em," and less than wholesale rates prevailed before the day was over.

It was the general opinion that more plants were grown and sold this year than ever before. Lilies were very plentiful, yet all good ones were sold. Hydrangeas, while very fine, did not seem to strike the fancy as usual, and quite a number were left over. Good pot roses were very scarce the bad weather keeping them back. Of daffodils and tulips, a number in 6-inch pots sold very well. Robt. Craig had a fine stock of this kind of stuff and sold entirely out.

Easter lilies were sold for less this year than ever before. With the advent of the *Harrisii* they dropped from 50 cents to 35 cents per flower, which price prevailed until this season, when they fell to 25 cents and the "speak easies" asked from 15 to 20 cents. Growers say there is no money in raising lilies at less than

15 cents a flower. We believe this to be true, and when they attempt to sell at this price and deliver (as some of them do) one pot at a time, they will find still less for their trouble. The extra price for delivering plants at this busy season is a very large item in the expense account, and in the magnificent distances of this large city it sometimes amounts to the profit on the sale.

Smilax is very scarce at this time, and can hardly be said to have been in full supply at any time this season. Jacqs are becoming plentiful, and wholesale from 10 to 15 cents.

Anderson has a house of Brunners and Laings just in; he did very well, as they were in great demand. Laings brought 40 and Brunners 60 cents.

Business since Easter has been fairly good, and quite a number of entertainments are on for next week.

Theodore Roehrs and Mr. Keller of Brooklyn paid a flying visit to this city a few days ago.

Mr. Charles Meehan, now with John Barton, is about to start in business for himself. He is laying out ground, and intends to erect three large houses the coming summer.

New York.

Easter trade was very good. Notwithstanding the unfavorable weather during the week, which greatly impaired the prospects and made buyers cautious, there was a good all-around business. Saturday was fair, and Sunday was an ideal Easter day, a Godsend to many a poor florist.

All kinds of flowers were plentiful and brought a good average price. Roses were fine, and just enough for the demand. Tulips and hyacinths were not quite as good as in preceding years. Jonquils and narcissus were fine and sold well. Valley and violets were also fine and in good demand. But Harrisii! Heavens, what a hit! Never before were so many cut lilies seen as on this Easter. They were everywhere in abundance.

There was also a good plant trade. Easter is unlike Christmas or New Year's in this respect. The business is divided between cut flowers and plants, with a tendency towards the latter. Whatever longiflorums were to be had were very poor, but Harrisii were in good condition. There were many thousands of Harrisii blooms shipped here to private families from Bermuda which greatly interfered with the sale of local grown flowers.

Hydrangeas were not quite as good as those of previous years. Azaleas were very fine, some new varieties being very beautiful and acquisitions in color.

Dutch hyacinths were poor this year; the growers say the bulbs were very soft when imported. Genistas were very fine. Roses in pots were somewhat a failure. There was quite a number of rhododendrons around, but the azaleas overshadowed them. If the scattered displays could have been gathered together in some great building it would have been a glorious sight; as it was each store made a beautiful display, in many cases additional stores being hired to accommodate the increasing trade of some of our florists. Violet plants in bloom was a pretty little novelty and sold readily at a dollar each.

Of course cut flowers being on the average very fine and reasonable in price, interfered very much with the sale of plants, and where "plunging" had been resorted to there was considerable left on

hand. It is estimated that 90,000 violets were sold at Easter in twelve of the principal stores here.

Of course, speaking of New York, it must be understood to include Brooklyn. The ties between the two are made of iron, and John Weir lives half his time here. There is a very large flower trade done in Brooklyn and Mr. Weir does an enormous trade. Messrs. Phillips, Burges, Mallon, Wiperman and the rest report having done a very large business.

In New York the reports vary, but some people are born grumbling, and taking fully into consideration their principal characteristics in life, we can reasonably suppose they will die so. Some have done a bit on Easter trade than they have ever done, others have done their usual and some say they did a poor business. Of course much depends on reputation. Taking all in all it was a very good Easter for the business.

Whatever plants were left were used in decorating the Seventh Regiment armory on Tuesday last. There was a regular convention of florists held in the building on that occasion, and never before was seen so many florists decorating one building. There was great fun and great competition. It was looked upon as a preliminary to the coming show. Each company had its own florist. There were ten of the principal florists of the city engaged to do the work and every style and class of decorating was shown. Each company's room was turned into a flower garden, and many beautiful decorations were shown. It was amusing to see how the soldier boys caught on to their valry and went around judging.

Easter is gone, but our exhibition is coming, and everything talked about turns that way. There are a good many entries in many of the classes, and the competition will be very warm. Every foot of ground is taken and it cannot be otherwise than the finest show ever given here. Both retailers and growers are well represented and the private conservatories of the state will exhibit for the first time in public their rarities.

Mr. James Davis, for many years with Klunder, will decorate the hall for the club in a manner consistent with the occasion. Mr. Davis is responsible for the news that there will be a couple of "Floral geyers" on Broadway next season.

March 22 was visiting day amongst the florists. Every plant grower within a radius of twenty miles of New York kept open house for the reception of buyers from the city; it was harvest day for the growers. It was a miserable day, the cold rain came down incessantly, but notwithstanding all this a large party of the retail florists of the city visited Bay Ridge, the home of the azalea, genista and hydrangea.

Mr. Weir's little village of glass was first visited. Here the party was received by Mr. Fred Weir, who kindly conducted us through the vast ranges of glass which were filled with plants in excellent condition. Mr. Weir first took us through the finest house of *Asparagus plumosa* any of the party had ever seen. It is a forest of beautiful green vines ranging from five to eight feet in height. Next was a house of fine specimen azaleas effectively staged on the center bench with many hundreds of fine Dutch hyacinths on the side benches. From this we were led to a beautiful scene, a house of *Portia carnations* in full bloom; these were planted in the spring and grown under glass all summer. "They have done remarkably well," said Mr. Weir, and in-

deed they looked fine. We counted as many as 150 buds on some of the plants. Next came a house of *heliotrope* consisting of all the leading varieties. A house full of callas with many hundreds of fine blooms was a pretty Easter picture. Another house filled with many thousands of *Lilium Harrisii* blooms made a magnificent display. Mr. Weir said he expected to sell fifteen to twenty thousand lilies at Easter in his stores. Houses of hydrangeas, genistas, spiraeas and jonquils looked very fine. And a great feature was the immense palms, some of which were in large tubs five feet below the surface. There was one gigantic *Pandanus* utilis one foot through the trunk. Houses of tall *Ficus elastica* and fine specimens of *Kentia Belmoreana* were in fine condition. There are twenty-six large houses devoted to the cultivation of flowers and decorative plants to partially meet the requirements of Mr. Weir's enormous trade.

A short distance from this is Mr. Dean's fine range of glass. Here we were met by the famous and ever genial grower, who conducted us through his magnificent exhibition. This place has been so well described in recent issues of the *Florist* that anything further would be superfluous.

There were several other places to visit, but the day was fast drawing to a close, leaving but sufficient time to pay our respects to Mr. Keller, who also has an extensive place devoted to the growing of cut flowers and blooming plants. There we found some handsome specimen azaleas, notably *Judica alba*, *Belle Grindois*, *Comtesse de Lamdre*, *Queen of Holland*, etc., some of which were five feet in diameter and covered with bloom. Houses of *Baroness Rothschild*, *Magna Charta*, *Mme. de Watteville*, etc., were looking remarkably well.

Flowering plants never were so fine before. We reluctantly left Bay Ridge, paying but little attention to the inclement weather, knowing only that one of the grandest treats is a visit to the famous plant houses of Bay Ridge on Palm Sunday.

JOHN YOUNG.

Prize Group of Orchids.

The illustration shows the group of orchids entered by Mr. Kimball, of Rochester, at the recent exhibition at Madison Square garden, N. Y., projected by Siebrecht & Wadley. This was the prize collection. There were three more of these large mounds in the center of the garden, and together they made a handsome central attraction. The orchids were of various kinds, banded up on a stand with steps, and with a palm and ferns at the top.

Will it be the Same in 1893?

"The beautiful ferns, palms and other rare plants exhibited by me, such as New Jersey, in a side room of the horticultural building at the Centennial exhibition, Philadelphia, was the one redeeming feature among the contents of that great structure. This was unfortunate as it misrepresented the condition of American horticulture besides being a severe criticism on the patriotism of American horticulturists."

I came across these words in Robinson's work on ferns and they emphasize the necessity of taking care that horticulture does not share the same ill not a worse fate in Chicago in 1893 than it did in Philadelphia in 1876. What have the

PRIZE GROUP OF ORCHIDS

associations of florists, nurserymen and seedsmen done to avert this imminent danger? Can they consolidate on this question and make themselves the center round which all who have the welfare of horticulture at heart might gather—bringing the opinions of the leaders in horticulture into proper focus for shedding effective light on the powers that be?

G. C. W.

Spring Exhibition of the Mass. Horticultural Society.

The annual spring exhibition opened at Horticultural Hall, Boston, on Tuesday March 31, continuing for four days.

On account of the abundant material for brilliant massing this show has always received much popular favor. With the exception of the last day of the exhibition the weather has been exceedingly favorable, and this fortunate circumstance together with the many novel attractions offered, has sufficed to bring out a most gratifying attendance.

The extensive groups and solid plateaus of hyacinths and other spring flowering bulbs which were seen at the spring exhibitions of a few years ago, and which were brought out mainly by the medals formerly offered by the Bulb Union of Holland for this class of exhibits, were missing, but in all other respects the exhibition of the present season was equal to the best of its predecessors.

There were entries enough to fairly fill both of the society's halls without overcrowding. The entire center of the lower hall was occupied by two splendid groups of hardy spring flowering plants from the Bussey Institution and Harvard Botanic Garden. The collection from the Bussey Institution arranged by Chas. J. Dawson, while from the center of the group there was the most beautiful feature of the exhibition, and was altogether one of the most artistic arrangements ever seen in the hall. Crocuses, violets, anemones, scillas, hepaticas, primroses, trilliums, aquilegias and other pretty spring blooming herbaceous plants nestled in little colonies among the rocks and mosses and looked as natural and contented as though they had always grown there, while from the center of the group there sprang in luxuriant masses and delicate sprays, dicentras, solomon's seal, etc., with andromedas, spiraeas and various other spring blooming shrubs.

Around this hall on the tables most of the cut flowers were shown, while on the stage was arranged a fine display of conifers from W. C. Strong, among which were specially noticeable a large number of shapely specimens of *Sciadopitys verticillata*.

The exhibition of cut roses was not very large for the very good reason that exhibitors are required to keep these in good condition for four days, and the premiums offered are so much out of proportion to the value of such flowers that growers who exhibit in this class must do so at a pecuniary loss. But those that were shown were very fine specimens, and the continuous crowd in the vicinity of this section was a good indication of the strong hold which the Queen of Flowers still maintains on the public favor. A vase of Ulrich Brunner from C. V. Whitten was remarkably fine, as were also Cornelia Cook, Madame Hoste, Catherine Mermet and Bride. A certificate of merit for superior culture was awarded for the Brunners. Thos. H. Meade took a number of first premiums with vases of superb Mermets, Brides and Duchess of Albany. Some good specimens of Baroness Rothschild and Capt. Christie were staged by W. H. Elliott, who also made a handsome chandelier decoration with *Asparagus plumosus*. There were no specially new roses shown with the exception of James Comley's "Oakmont," which received a first class certificate of merit, and Augustine Guinoisseau from W. H. Spooner. This latter rose is also known as the White La France, but it is far from white.

There was quite an extensive display of carnations. First prize for general collection went to C. Southworth, closely followed by R. T. Lombard as second. Mr. Lombard showed the new yellow carnation Golden Triumph, grown by John H. Pond, and was awarded a first class certificate of merit for the same. Among the carnations which were noticeably well grown were Mrs. Elliott, Hector, Mrs. Fisher, May Queen, L. L. Lamborn, Jeannette, Ferd Mangold, Orient and Florence. Seedlings were shown by Joseph Talley, Geo. Seaverns and C. Southworth. Mr. Southworth showed Nellie Lewis, which he claims sported with him from J. J. Harrison at about the same time it made its appearance in various other parts of the country. From J. C. Chambers came Grace

Darling, which has never been shown here before, and received honorable mention. The Grace Wilders and Mrs. Fishers exhibited by Jas. Tulis have never been excelled.

A unique collection of cut flowers was staged by Harvard Botanic Garden, K. R. Cameron gardener, among which were many curious and interesting things. One of the prettiest was *Alpinia nutans*, bearing a beautiful pendent raceme of delicate pink tipped buds, which when open display an odd looking, fragrant, orange and scarlet corolla.

The upper hall was devoted mainly to the azaleas, orchids and spring flowering bulbs. The stage was well filled with a display of evergreens from Temple & Beard, in which were some good specimens of *Araucaria imbricata* and Irish Yews.

The most extensive collection in the hall, and which was grouped with grand effect was that of Dr. C. E. Weld, Kenneth Finlayson gardener; 23 prize cards—17 firsts, 7 seconds and 1 third—will give some idea of the size and merit of this group, which included numerous specimen plants of acacias, azaleas, cinerarias, cyclamens and primulas, besides a superb collection of hyacinths, tulips, narcissus, freesias and other bulbous plants. Among the best plants here were an *Erica Cavendishii*, which received first prize for specimen greenhouse plant, and *Indigofera tinctoria*.

The first premium for collection of orchids was well won by E. W. Gilmore. The gardener, Thos. Greaves, deserves especial credit for turning out such a superb stand of orchids with the limited resources at his command, for his houses are not large and make no pretensions to comparison with some of our more ambitious orchid establishments. There were remarkably well bloomed plants of *Dendrobium Freemanii*, *Jamesianum* and noble, *Cattleya Trianae*, *Odontoglossum Alexandræ triumphans*, *Rosii majus* and luteo-purpureum, *phalaenopsis*, in several species and the beautiful little *Oncidium concolor*.

Benj. Grey showed 50 varieties of dendrobium flowers, several of which were quite distinct and valuable.

The best grown plants in the hall were two specimens of *Dendrobium nobile* shown by Mrs. Durant, Ed. Butler, gardener. These plants were very large and full, very symmetrical and were simply masses of bloom. Several superb specimen azaleas were also shown by Mrs. Durant. A particularly fine one was Jean Verschaffelt.

For three orchids both first and second premiums were taken by N. T. Kidder, Wm. Martin gardener. Among the best plants in this collection were *Dendrobium Farmerii*, a large pan of *Cypripedium villosum* and an unusually brilliant variety of *Lycaste Skinnerii*. The azaleas from Mr. Kidder were skillfully trained and well bloomed. There was a large general collection of plants from the Bussey Institution, including some fine ranunculuses, hardy lilies, etc. To this display was awarded first premium for collection of spring flowering bulbs, also first for four hardy shrubs in flower. The shrubs shown were *Pyrus baccata*, *Viburnum plicatum*, Mountain Laurel and double flowering almond. A pretty, profuse flowering greenhouse climber, *Rhodochiton volubile* from this exhibitor attracted much attention as a novelty.

The customary fire contribution was made by John L. Gardner, C. M. Atkinson gardener, including a grand mass of shrubs, orchids and spring flowering

bulbs, and many premiums were won in the different classes. First prize for four hard wooded greenhouse plants was awarded to *Boronia megastigma*, *Boronia heterophylla*, *Chlorizema ickitilium* and *Enostemon intermedius*. These were all very finely grown plants, as were also the specimens of *Eriostemon densifolius* and *Andromeda japonica*. The entire hall was scented by the delightful fragrance of *Boronia megastigma*, which was noticeable even above the heavy odors of hyacinths and jonquils. Among the orchids in Mr. Gardner's exhibit was a particularly good *Dendrobium Wardianum*.

The group of plants from A. W. Spencer, Robt. Blair gardener, was well arranged and contained some well grown specimens of azaleas, rhododendrons and hydrangeas. First prize for four azaleas was awarded here.

Other large assorted displays came from J. S. Fay, W. S. Ewell & Son and Mrs. E. M. Gill, and Norton Bros. showed some good anthuriums and orchids. A collection of azaleas comprising 50 distinct varieties was shown by F. B. Hayes, James Comley gardener.

H. H. Hunnewell, F. L. Harris gardener, showed a number of well bloomed imantophyllums and a 12-inch pot of amaryllis bearing fully 50 expanded flowers. Rea Bros. had a dozen varieties of *Primula Sieboldii*, and W. C. Winter some good auriculas.

No plant excited more admiration than a beautiful specimen of *Cypripedium spectabile* bearing fourteen spikes of flowers, grown by Jackson Dawson.

Mrs. McKee, daughter of President Harrison, honored the exhibition with a visit, and among the other interested visitors from a distance were Mr. W. A. Manda, of Short Hills, N. J., Mr. E. V. Low and Mr. Alfred Outram, of London, England. WM. J. STEWART.

Long Island Notes.

BY WM. FALCONER.

SHIRLEY DARE as a GARDENER (see New York Herald, March 15).—"The luxury of life possible to a scientific gardener within a few hours of any good town is beyond that of any man not a millionaire. * * * There is hardly a town of 2,500 inhabitants in this country where a clever gardener could not by fifteen years of well directed work make himself the richest man of the place. * * * On every side we see the solid, stable fortunes made by men in horticulture who began as poor boys with their hands only, and had to work out their own training. To-day the work is more of a science. Yet pretty indeed, and very encouraging. But Shirley Dare omits to mention the name of any of these smart gardeners who have made "solid, stable fortunes" in this business. True, Peter Henderson was a millionaire and made every penny of it himself, but he had enormous, executive business ability. Very few men in the business are gifted as he was and not very many are amassing fortunes in it. But on every hand the money-making class are the men more noted for executive ability and business capacity than for scientific or practical attainments.

AMATEURS VS. FLORISTS.—A good many florists complain that amateurs get hold of wholesale lists and endeavor to get goods at wholesale rates, and if they cannot do it as individuals, they will get up clubs and secure the reduction in this way. True, this is aggravating, but we have no jurisdiction in the matter. We

cannot prevent the amateur from buying whatever he wants from whom and where he pleases, and at the very lowest rates possible. We do the very same thing ourselves in the case of glass, coal, etc. And while we can avoid, so far as we know, sending wholesale lists to amateurs, or selling to them at wholesale rates, we cannot prevent these lists from falling into their hands nor them from seeking the benefits of the wholesale rates. But we can discountenance it and use our influence against it.

BIG MIGNONETTE.—Mr. Eugene Baile-douze, of Flatbush, brought me half a dozen sprays of his mignonette the other day, and they were the most massive I have ever seen. The sprays were cut 14 inches long, and the racemes of blossoms were 8 to 10 inches in length; the flowers are white with reddish brown anthers, extra large, tufted with green foliaceous bracts, and set very close together, and the first raceme was 6 inches in circumference. It is exceedingly fragrant. The six sprays together weighed exactly eight ounces. Like all other winter mignonette, now-a-days it had been disbudbed to the one terminal spike.

CLEMATIS DAVIDIANA.—A year or more ago I sent some plants of this hardy border plant to Mr. George Savage, of Rochester. I met him at the orchid show in New York the other day, and he told me: "They grew splendidly, but I can't see any beauty in them; in fact, so far as beauty is concerned I would most asssoon have a stinging nettle in my garden! No, no, George, I will not side with you in this matter."

Deciduous Calanthes.

These will now have started and should be at once shaken out of pots and carefully looked over. Thoroughly clean of all traces of scale or mealy bug. Use clean pots and plenty of drainage, over which place a little clean sphagnum. The best material for potting is good fibrous loam mixed with a few broken potsherds and a little broken charcoal and some small rough bits of old cow manure about the size of pens. Fine soil is often injurious by its washing down into the drainage.

As growth advances give a careful watering with weak cow manure water once or twice a week. As soon as the blooming period is over, the leaves have fallen and the bulbs are ripe, carefully withhold water and store them on a shelf or bench in a temperature of 55° to 60° till season of rest is over and they again show signs of starting to grow. Be careful that they receive no drip or water during their period of rest.

WM. MATTHEWS.

Orchid Pests.

I will answer Germantown p. 616 by another question. How are woodlice a pest to orchids?

I am aware of the popular belief that they eat the roots, etc., of orchids, but I have never yet been able to catch them at it.

I have personally handled some 500 suspended specimens continuously for

some six years, and in every instance where an injury has occurred to roots, or flower shoots, I have found slugs hidden in the cylinders. Woodlice may or may not have been present. If they alone were there I never found any injury.

I use two pounds of soap and two tablespoonsful of kerosene boiled slowly together in a gallon of water until the soap is perfectly dissolved and the oil blended. This amount poured boiling hot into twenty gallons of water I use as a "dip" for all orchids, and it materially checks all scale except the Japan scale and the white cattleya scale. Slugs, worms and woodlice get to the surface in a great hurry when the plants are immersed and are then killed. I have not found a better plan, but hope to hear of one.

I would be especially glad to hear of some proportion of soap and kerosene that will certainly cook the varieties of scale I have mentioned without also cooking the plants.

Trenton, N. J. JAMES MACPHERSON.

Plants Available for Bedding.

There evidently being in some localities a growth of opinion in favor of greater diversity in bedding, there will undoubtedly be a demand felt for plants suitable for this purpose, and for that matter such a demand may be encouraged by the judicious use of some of the said plants in attractively arranged beds in the front of a florist's establishment.

These home displays, as they may be termed, are certainly beneficial, for they not only show that a man takes some little pride in his surroundings, but they also help to induce others to try to do likewise, and in this way do more to encourage a demand than the most elaborate catalogue description can do. It will of course be understood that nothing derogatory toward catalogue advertising is intended in the foregoing remark, and for that matter the value of that method of encouraging business is too well known to need defence in these columns.

But to return to our subject, there are several very handsome plants that are well-suited for this purpose found in the ficus, prominent among which are *F. elastica*, *F. Chauvieri*, *F. macrophylla* and *F. macrocarpa*.

The first-mentioned species, *F. elastica*, needs no description here, and *F. Chauvieri* may be briefly described as bearing some resemblance to the former, though having somewhat thinner leaves and more prominent veins. This species has been in cultivation for many years, but does not seem to have attained great popularity.

Ficus macrophylla, sometimes termed the Australian Banyan, is a strong growing member of this extensive genus, and produces large foliage of dark green color and having rather prominent veins.

F. macrocarpa is a smaller grower than what we might term the typical ficus of florists, *F. elastica*, but makes a compact much-branched plant with dark green somewhat ovate leaves that are about four to six inches long and broad in proportion. Another advantage possessed by *F. macrocarpa* is that it roots very readily and without any tonguing or mossing, as is frequently practiced with *F. elastica*.

Another elegant plant for large beds is *Cyperus papyrus*, the papyrus plant of the Nile, which throws up its graceful heads of narrow leaflets to a height of eight to ten feet. It should be remembered, however, that this plant is prac-

tically an aquatic, and unless planted in very moist ground requires frequent watering.

Cyperus alternifolius and also its variegated form are both good bedding plants, and are much more dwarf in habit than the preceding. The variegated form referred to can only be propagated by division or by cutting, these rooting readily in water, as in a tank or other water vessel in a warm house, while *C. papyrus* and *C. alternifolius* may be easily obtained from seeds, the seedling plants being more shapely than those obtained by division.

The various forms of New Zealand flax or phormium are also valuable outdoors, their sword-like, almost upright leaves giving a pleasing variety of habit when seen in a foliage bed.

Among these the typical New Zealand flax, *Phormium tenax*, is a good one to begin with, its leaves reaching a length of five or six feet under favorable circumstances, and are of dark green color with brownish margins.

P. tenax variegatum is also highly ornamental, the leaves being more or less striped with yellow, while *P. tenax* Veitchianum is probably the handsomest of all, though of smaller growth than the preceding, the leaves being narrower than those of the type, and are beautifully variegated with stripes of creamy white.

P. Cookianum variegatum (also known as *P. Colensoi* var.) is another good form, and bears a certain resemblance to the last named, but is not quite so well variegated.

Bambusa metake is also a valuable plant for mixed borders, and has the additional recommendation of being perfectly hardy, at least in this latitude, for near here it is not only hardy but evergreen too. It has bright green leaves of lanceolate form and six or eight inches in length, and the habit of the plant is rather compact and branching, though very graceful. *Bambusa metake* may be propagated by division or by seeds when the latter are obtainable.

The acalyphas are another useful group of ornamental foliage plants suitable for bedding and are apparently gaining in favor each season.

Of these *A. muscica* is one of the best, and presents a variety of bright coloring in its marbled leaves of various shades of bronze and crimson.

A. marginata is also good, the leaves being large and the color varying from olive to bronze, with a yellowish margin.

A. Macfleckana is another fine sort and has very large foliage, the latter being chiefly of various shades of red and crimson.

The acalyphas can be almost as readily propagated as coleus, and flourish under similar conditions, and will doubtless be very largely used by their merits become better understood. W. H. TAPLIN.

Philadelphia.

SAN FRANCISCO.—The Florists' Club of California has been organized with officers as follows: President, Emory E. Smith; Vice-President, P. J. Keller; Recording Secretary, M. H. Wilkins; Financial Secretary, C. W. Shaw; Treasurer, C. H. Baker; Directors, A. Carbone, D. Westcott, F. Shiley and H. McGowan. The club starts out with a membership of 44.

YOU WILL benefit the FLORIST by mentioning it every time you write one of our advertisers.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

Montreal.

The spring exhibition of the Montreal Gardeners' and Florists' Club was a very beautiful display and an advance upon the club's previous efforts. A very fine collection of orchids was shown by Hon. J. J. C. Abbott, and to it was awarded the silver cup given by Pitcher & Manda of Short Hills, N. J. First prizes were awarded to Wm. Wilshe, gardener to Hon. J. J. C. Abbott, for 12stovegreenhouse plants, 12 orchids and 3 orchids; to Joseph Bennett for 12 pots flowering bulbs, 6 pots tulips, 3 single and 3 double, 12 pots tulips, 3 pots narcissus, 3 pots lily of the valley, 3 Spirea japonica, 6 roses Mermet, 6 The Bride, 6 Perle des Jardins, 6 Niphetos and 6 roses any other variety; to J. Bland for 18 hyacinths in at least 12 varieties, 6 Lilium Harrisii, 3 Dentzia gracilis and specimen Dentzia gracilis; to John Doyle for 3 Primula sinensis, 3 Primula obconica, specimen hydrangea and 3 special prizes for roses; to P. McKenna & Son for specimen azalea, 6 roses American Beauty, 12 red carnations, 12 white carnations and 12 pink carnations; to W. J. Horsman for 3 pots callias, 3 hydrangeas, and 3 specials for mignonette, primulas, polyanthus and cyclamens; to Wm. Bell, gardener to Mr. Robert Mackay, for specimen orchids, specimen imantophyllum and hanging basket of ferns; to J. Walsh for 6 table plants; to J. Kirkwood for 3 Lilium Harrisii and special for 3 calceolarias; to Jules Betrix, gardener to Mr. Andrew Allan, for 3 amaryllis; Mr. Betrix and Wm. Bell divided the honors of first on collection of flowering plants and bulbs the judges considering their collections of equal merit in this class 2nd went to J. Kirkwood, 3d to Joseph Bennett and specials were recommended to be awarded to J. Bland and P. McKenna & Son. Specials were also awarded to A. Pineau for 6 plants Lilium Harrisii, and to Geo. Trussell for tri-color geraniums and 3 pot roses.

At the annual meeting of the club officers for the ensuing term were elected as follows: President, Mr. James McKenna, 1st Vice-President, Mr. J. Walsh, 2d Vice-President, George Trussell; Treasurer, Mr. J. Dunbar (re-elected); Secretary, Mr. Walter Wilshe (re-elected); Assistant Secretary, Mr. J. Johnson; Corresponding Secretary, Mr. Joseph Bennett; Executive Committee, Messrs. John Eddy, J. Bland, W. Wilshe, William Whiting, William Evans, Jr. The reports presented were all of a satisfactory character.

ADDRESS **A. LAUER,**
1210 E. Broadway, LOUISVILLE, KY.

DAISY SNOWFLAKE

Daisy Snowflake—This Daisy, if treated like Vinetia, will give splendid returns for all labor bestowed upon it. I grow it by the thousands and cannot supply the demand for cut flowers, as it keeps fresh from 2 to 3 weeks after being cut, and then looks as fresh as other white flowers just cut. The flowers are borne on stock long stems, fine white and beautifully quilled, and average as large as a 30 cent piece; a great acquisition to florists.

Price, \$1 per doz. Free by mail; \$5 per 100 by express. **SEE WHAT F. J. KELLER SAYS ABOUT THIS DAISY:**

ROCHESTER, Jan. 28th.
Daisy Snowflake is quite a useful flower both for floral designs and put in with other great ones, and when tied up in small bunches they sell very rapidly with us for funeral designs. We are a great buyer in plants of carnations as it is cheaper and covers almost the same space, and keeps fresh considerably longer. Be sure and send me every trial! You can cut, as I cannot get them fast enough for my customers. They say it is the best cut flower to buy because it keeps fresh for 2 to 3 weeks. I feel I cannot say too much in favor of this useful Daisy.
Yours truly,
F. J. KELLER.

MISSION RIDGE GREENHOUSES,
CHATTANOOGA, TENN., March 1st, '91.
FRED SCHNEIDER, DEAR SIR:—We received our Daisies yesterday, and I believe they are! Enclosed please find our check for \$5.00 for 100 more plants. Please send them as soon as you can; we want to get them to blooming well before Easter. We can supply the cut flowers and at what price? They ship so excellently that we would like to get some for immediate use.

Very resp't **MAC GOWAN & COOK,**
P. S. We add to our remittance; please send its value in Cut Flowers of the Daisies we are present.

November —, Bay City, Mich.—Chrysanthemum show Bay County Hort. Society.

As WILL be seen by the reports we publish in this issue the Easter Trade of 1891 has been generally more satisfactory than our former one. In nearly every case the demand for blooming plants and for loose flowers is still on the increase, showing that the tide of popular favor is setting still more strongly in this direction. The increased sales in spite of the very unfavorable weather that prevailed in many sections shows a remarkable extension of the demand and indicates that there is but little possibility of a falling off in Easter sales in the near future so long as stock can be supplied at fair prices.

A HALF-DOZEN Jacques received from Mr. N. Singler, Washington Heights, Ill., are the best specimens of this rose we have ever seen. The blooms are very large and of good color and are on very long stems dressed with most magnificent foliage. The leaves average 3½ x 2½ inches and several exceed 4 inches in length. He also sends us a bunch of Silver Spray carnations, and the blooms are of excellent quality.

News Notes.

GERMANTOWN, PA.—George Laughlin, the florist, died March 28.

DENVER, COLO.—Aug. Schenkel has removed from 810 16th Street to 1635 Arapahoe Street.

DOVER, N. H.—The greenhouses of Harry Johnson were badly damaged and the stock ruined by fire on the night of April 2.

KALAMAZOO, MICH.—Mr. T. S. Cobb, late of the cemetery greenhouses here, died at Rock Lodge, Fla., March 22, aged 72 years.

TOLEDO, O.—George A. Heint entirely refitted and refurnished his store recently and made a beautiful display the week prior to Easter.

MINNEAPOLIS, MINN.—The regular meeting of the Minneapolis Florists' Club will be held at the West Hotel, Saturday April 11, at 8 p. m.

UTICA, N. Y.—At the meeting of the Florists' Club April 1, the Executive Committee was directed to make arrangements for a fall exhibition.

LOS ANGELES, CAL.—The name of the Southern California Floral Society has been changed to Southern California Horticultural Society. At the meeting held March 23 an essay on roses was read by C. E. Brydges.

INDIANAPOLIS, IND.—Jens Larsen, a well known florist, having an establishment on Twenty-third street, died March 25. This is the second florist Indianapolis has lost this year. Wm. Bertermann, of Bertermann Bros., is in California, where he will remain for a few months.

HARRISBURG.—McClintock & Opperman succeeded L. E. McClintock last July. Last summer they bought the greenhouses on Jos. Schmidt's place, previously rented by Mr. McClintock, and moved the buildings to a new location on Cameron Street, where they now have five large houses. They are built on the side of a hill which has a grade of 18 feet to the 100 feet, one house running along the ends of the others, connecting them together. The houses are heated by steam in 1-inch pipes from a 25 horse-power boiler. They intend building two more houses the coming summer. The new address is 1023 South Cameron Street.

Steam Heating

I have read the replies in regard to southern floriculture, and I desire to add my mite to the discussion and endeavor to gain a point or two in favor of steam heating. Thus far I have read but one article in favor of steam (by Mr. Geo. Himm, Atlanta, Ga.), all the others being in favor of hot water. I think that it is an injustice if the merits of steam

heating are not duly considered before its superiority is denied. I admit that I may be a trifle biased in my opinions, but I also wish to say that I have had no personal or actual experience with hot water and that I only speak of what I know and withhold all suppositions and theories. I don't think that any one can make any comparisons unless they do so from actual experience in handling the two systems of heating under very similar conditions, so I will only refer to the merits of steam heating. It may be that steam is more expensive and more wasteful in fuel in a warm climate than it would be further north, and that for this reason hot water would be better, but still I believe that steam is the best, taking into consideration all conditions of climate, etc.

To begin with, all low pressure steam boilers are fitted with automatic dampers which represents the saving of a considerable quantity of fuel. When heat is required it does not necessitate heating such a large body of water and the opening of a valve allows the steam to circulate through the pipes, and automatic air valves allow the air which may have collected in the pipes to escape, and thus insures a complete circulation. It is more convenient and easier to regulate the temperature in a house that is piped with several 1½-inch pipes than it is in a house with only a few 2 or 4-inch pipes, especially in late spring and early fall. If there is a sudden rise in the temperature the valves can be closed and in a few minutes radiation ceases. The work of fitting and piping a house is not nearly so laborious, as I know from experience that it does not require as much muscle to cut and thread a 1½-inch pipe as does a 2 or 3-inch pipe. If all pipes are placed in position so that there is a continuous down grade in the entire piping of a house, and care is taken to keep all return pipes above the water line in the boiler, and also to have an automatic air valve at the lowest point of each pipe or set of pipes, there is no reason why steam heating should fail to give entire satisfaction. In my opinion steam is unapproachable in any climate or under any condition where prompt, effective work is required.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president. JOHN FORTRESS, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

A Favorable Decision.

FREE ENTRY—FORCING PLANTS, CAMELIAS, AZALEAS, AND LAPAGERIAS.

Before the U. S. General Appraisers at New York, February 4, 1891.

In the matter of the protest, 274b, of G. Kiesling, against the decision of the collector of customs at Savannah, Ga., as to the rate and amount of duties chargeable on certain camellias, azaleas, etc., imported per Russia, via New York.

Opinion by SHARRETT'S, General Appraiser.

The importation consists of camellias, azaleas, and lapagerias, which the collector reports "are intended for nursery stock, the importer being a nurseryman and gardener." Duty was therefore assessed upon the plants at 20 per cent. ad valorem, under paragraph 282 of the act of October 1, 1890. The importer claims that the plants are of a kind generally "used for forcing under glass for cut flowers," and are therefore exempt from duty under paragraph 666.

The plants being of a kind chiefly used in the manner and for the purposes described in paragraph 666, the fact that they can be grown to a limited extent in the open ground in certain localities does not change the result. It would be manifestly impossible to determine the intended use of each individual plant, and it would not be proper to classify the same plants differently at the several ports in accordance with the varied temperature of the country. It is sufficient that the plants in question are of kinds chiefly grown under glass, and this appears to be the case. In fact, azaleas, which form a portion of the importation, are specifically enumerated in paragraph 666.

The claim of the importer is accordingly sustained.

[The above decision supplied us by our correspondent R. C. indicates a very fair intention on the part of the General Board of Appraisers. We hope they will keep on in the line of work indicated above.—ED.]

It is reported that a bill will be presented to the Illinois legislature making it a criminal offense to plant shade trees in winter with bare roots.

INDIANAPOLIS.—F. C. Huntington has returned home much improved in health after a stay of four months at Thomasville, Ga.

IMPORTANT TO ALL FLORISTS.

Our new trade list of 50 pages and our descriptive catalogue of 100 pages is now being mailed to you. Should you not receive a copy within a few days, notify us and we will send you one.

Without any desire to brag we assure you we have the largest and best collection of Chrysanthemums in the country.

All stock is bloomed before propagated from. Our list contains over 600 varieties. We also publish a list of synonyms in our catalog.

Pamphlet of "Summer Flowering Bulbs" 20 pages mailed on application. Price \$3 per 100. Our name does not appear in the pamphlet, therefore it is highly valuable for those having a counter trade. Our list of dormant bulbs is the largest and finest of any in the country.

We have so much of interest to florists and others in our catalog that we cannot begin to mention any.

Blanche Ferry Sweet Pea, proved of great value last year as a cut flower. We have a large stock of fresh seed at 10 cents per oz.; \$1.00 per lb.

You will bear in mind we told you last year that Chrysanthemum V. H. Hallock was a good one. You will hear from this later on. We also recommended Charity and White Cap on our last years set as being particularly valuable for florists' use. Prices in quantity on application.

9 to 11-inch "		115.00

LILIUM LONGIFLORUM same price and sizes as above. Delivery in August. Please order before May and oblige. Yours respectfully,

HULSEBOSCH BROS.,

P. O. Box 3118. NEW YORK CITY.

Chicago.

Mr. A. E. Whittle of Albany, N. Y., paid the city a flying visit last week.

Mr. O. P. Bassett of Hinsdale has returned from his sojourn in Florida much improved in health.

Mr. Otto Weinhaber of 370 Center Street, a florist well known to the Chicago trade, died April 2.

Dick Cogan, until recently with Kennett Bros., is now with Peter Kirscht at Niles Center.

Easter Sunday was a remarkably pleasant day, but for a week or more previous the weather was as bad as it could be. And while the supply of flowers for Easter was large, had the weather been favorable the cut would have been enormous.

Since Easter trade has been fair with down town florists and apparently rather better than that with those located away from the business center. The florists in the residence districts seem to be getting the bulk of the orders for funeral flowers.

Nearly all the florists say that the Easter trade of 1891 was by all odds the best we ever had.

You can give the AMERICAN FLORIST your fullest support by confining your orders to those who advertise in its columns, and when ordering mentioning the fact that you were induced to order by the adv. in the FLORIST.

Chrysanthemums.

Catalogue with description of my two new sets now ready. Sent on application.

NEW SET.

Mistletoe, Mermaid, Eda Prass, Innocence, and a few of the others, any number of any variety, 50 cents each; \$5.00 per dozen.

SEEDLINGS.

Grown from my own seed, gathered from choice flowers fertilized by the Chrysanthemum Bee. Ready May 1st, \$1.00 per doz.; \$7.00 per 100.

CHOICE STANDARD SORTS

of over 100 varieties. Strong plants good for cuttings for April and May propagation. From \$5.00 to \$10.00 per 100. Send for estimates.

FRED. DORNER,
La Fayette, Ind.

CHRYSANTHEMUMS.

The finest and most complete collection in the country. The choicest and finest sorts are the cheapest, as you will find when you sell the blooms in November. If, in the rush of the season's work, you have neglected to stock up with Chrysanthemums, here is an opportunity to do so at once.

NO. 1. We will send you 100 plants in 20 finest varieties, to include **WIDENER, MOLLIE BAWN, MRS. W. K. HARRIS, SHASTA, MRS. WM. BOWEN, JOHN LANE, E. G. HILL, IVORY,** and others equally good, for..... **\$10.00**

NO. 2. We will send 100 plants in 20 fine sorts, not quite so recent introductions as No. 1, but all sterling varieties like **EXCELLENT, H. CANNELL, INTERNATIONAL, KIOTO, MARVEL, MISS M. WEIGHTMAN, T. C. PRICE, MRS. W. SARGENT,** for..... **\$6.00**

NO. 3. 100 plants in the 20 following varieties: **CULLINGFORDII, ELSIE, GRANDIFLORUM, JNO. THORPE, L. B. BIRD, L. CANNING, MRS. A. BLAC, BELLE POITIVINE, ADVANCE, MRS. I. CLARK, PURITAN, TWILIGHT, E. LONSDALE, MRS. F. CLINTON, W. H. LINCOLN, W. W. COLES, VIOLET ROSE, MRS. F. THOMPSON, WHITE CAP and TOKIO,** for..... **\$4.00**

NO. 4. We will send 100 plants, one of a kind, all labelled, choice new and older sorts, **\$10.00**

NO. 5. 100 plants, TWO of kind, for..... **\$8.00**
P. L. BLANCARD, for..... **\$4.00**

NO. 7. 12 Novelties of '91, our own and various other raisers', for..... **\$7.50**

THE TWO OSTRICH PLUMES

{ **MRS. ALPHEUS HARDY,** in large quantity, at..... **\$4.00 per 100**
LOUIS BOEHMER,..... **\$4.00 per 100**

M. B.—With every \$10.00 order we will send, **GRATIS,** our Novelty **J. M. JORDAN;** magnificent incurving variety, light silvery pink, with rose shadings. The finest pink variety extant for cut flowers. (Single plants, \$1.00 each.) French Novelty, **M. MARIE HOSTE;** magnificent creamy white striped amaranth; this won two First Class Certificates from the National Chrysanthemum Society of Great Britain in the recent fall exhibits. (Single plants, \$1.00 each.)

CARNATIONS, ROSES, and a general line of greenhouse stock in great quantities.

ORIGINAL AND LARGEST GROWERS OF
LILIUM HARRISII, BETTER KNOWN AS **THE BERMUDA EASTER LILY**.
 BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1890, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1890, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 120 in length, of a crop of *Liliium Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists use for forcing for the Easter market only. This is not exclusively so; it derives its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name “Bermuda Easter Lily”—but by growing it in this country in the greenhouse, with successful results, it can be had in bloom all the winter from early in December until after Easter. In fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it does in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in.

For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have barely begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that *Liliium Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks. If in a proper place, it bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: “The Lilies came in excellent shape. I don’t think I lost one; it is a pretty good recommendation for your packing.”
 The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: “The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry.”

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**; supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market.

The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1890, over

— **HALF A MILLION BULBS.** —

Be sure you get the genuine *Liliium Harrisii*. In order to secure “the true variety,” purchase our Bulbs from original stock, which is known to be pure. The value of this Lily has led unscrupulous or ignorant parties to plant *L. Longiflorum* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irretrievably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large loss has resulted, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand. “Mixed Bulbs” only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

Preparing for an Exhibition—Page 533.

Nothing is said about newspaper support. In my opinion it is of paramount importance. Cultivate the good will of the local newspapers, and get them to speaking about the flower show before it comes off as well as when it is in operation. You cannot buy this favor with money. But get up a capital exhibition on a broad, united and unselfish basis, and conduct it liberally, popularly, vigorously and with enthusiasm, and I believe the press will support it cheerfully and warmly.

Help the reporters. Give them not only all the information they ask for, but bring to their notice whatever is of public importance or unusual merit. Don't attempt to paralyze them with your own botanical or horticultural knowledge, but tell them simple and interesting truths, something they can remember, for they seldom are trained florists, and they have got to get up their report in a hurry. Don't treat them as if they were a bore, or as if you were doing them a favor in telling them anything at all. Please remember you are the favored party, for on their grace much of the success of your exhibition will depend. The reporter generally spins a screed of some sort, and if "there is nothing in it," and it is all gush and twaddle, perhaps the young man knowing nothing could say nothing, and as you told him nothing he could remember, he is more sinned against than sinning.

Another thing: Don't abuse the good nature of the indulgent public. Don't go out into the by-ways and bring in every ghost, scrag and tatter wallop of a plant you come across simply to fill up space. Remember that a flower show should be an exhibition of plants and flowers of more than ordinary quality of their kind, and no plant or flower of mediocre rate should be admitted at any price. The people pay their money to see something meritorious, then don't disgust them by charging them an admission fee to see anything of inferior quality. As scrub stock are inadmissible in a horse show or cattle show, so too they should be in a flower show. W. F.

Violet Crops.

In answer to J. L. (page 616) he should pick from 50,000 to 60,000 salable blooms from October to April.

I have 1,200 plants, and have sold 22,375 blooms from October 20 to April 1. I would like to hear if any other growers have done better. The house will hold 3,000 plants, and I feel sure had I had this number of plants I could have cut 60,000 blooms. The 1,200 plants mentioned will give me 10,000 blooms this month.

I would also like to state that I do not believe in the existence of such a thing as a "violet disease." I have grown violets for ten years, and have never seen any disease. I have had a batch of plants that did not do as well as others, but it was neglect on my part that caused them to go back.

Below is my cut from October 20, 1890, to April 1, 1891:

October.....	1,200 blooms.
November.....	3,325 "
December.....	1,750 "
January.....	3,575 "
February.....	3,275 "
March.....	9,250 "

Total.....22,375

CONCERNING

Propagation of Lilipians.

A COMPLETE HAND-BOOK OF PROPAGATION AND POLLINATION.

THE NURSERY BOOK has been prepared with the utmost pains. It embodies the experiences of many experts. The author, Prof. L. H. Bailey, editor of *The American Gardener*, has been engaged in its preparation for many months, and has visited many nurseries and specialists, gathering material upon technical points outside of his practice. The whole volume has been read and criticised by Prof. B. M. Watson, of the Bussey Institution, one of the best propagators in this country. All available authorities have been consulted, and particular parts have been submitted to experts. The fruit matter has had the criticism of leading nursery men, and the head propagator of probably the most important nursery in America has been freely consulted. The Orchid matter has been prepared by W. J. Bean, of the New Royal Gardens. The instructions in the nursery list, which gives the definite methods for each plant, have been read by at least four persons. The book is absolutely devoid of theory and speculation. It has no hodge to do with plant physiology; not with any of the reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The nearly 100 illustrations are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, forest trees.

CONTENTS.

CHAPTER I—SEEDAGE. CHAPTER II—LAYERAGE. CHAPTER III—SEPARATION. CHAPTER IV—CUTTINGS. CHAPTER V—GRAFTAGE. Including Grafting, Budding, Inarching, etc. CHAPTER VI—NURSERY LIST. This is the great feature of the book. It is an alphabetical list of over 2,000 varieties, with a short statement telling which of the operations described in the first five chapters are employed in propagating them. The following entries will give an idea of the method.

ACER (MAPLE). Sapindaceae. Stocks are grown from stratified seeds which should be sown an inch or two deep; or some species, as *A. dasycarpum*, come readily if seeds are simply sown as soon as ripe. Some cultural varieties are layered, but better plants are obtained by grafting. Varieties of native species are worked upon common or native stocks. The Japanese sorts are winter-worked upon imported *A. polymorphum* stocks, either by whip or veneer grafting. Maples can also be budded in summer, and they grow readily from cuttings of both type and sort, wood.

PHYLLOCLADUS, PHYLLOCLADUS, DISCICARPUS. These are very juicy, they may be laid out in a light position. Cuttings from mature shoots, three to six inches long, root readily in sharp sand. Give a temperature of about 60 degrees, and apply only sufficient water to keep from flagging. If the cuttings are very juicy, they may be laid out dry for several days before planting.

GOOSEBERRY. Seeds, for the raising of new varieties, should be sown as soon as well cured, in loamy or sandy soil, they may be stratified and sown together with the sand in the spring. Cuttings, six to eight inches long, of the mature wood, inserted two-thirds their length, usually grow readily, especially if taken in August or September and stored during winter. Stronger plants are usually obtained by layers, and the English varieties are nearly always layered in this country. Layering is usually employed the English varieties being allowed to remain in layerage two years, but the American varieties, only one (P. F. 27), layered plants are usually set in nursery rows for a year after removal from the stools. Green-layering during summer is sometimes practised for new or rare varieties.

CHAPTER VII—POLLINATION.

Price, library style, cloth, wide margins, 93; Pocket style, paper, narrow margins, 50 cts.

For destroying ground moles in lawns, parks, gardens and cemeteries. The only PERFECT mole trap in existence. Guaranteed to catch moles where all other traps fail. Sold by seedmen, Agricultural Implement and Hardware dealers, or sent by express on receipt of \$2.00 by **E. W. HALES, RIDGEWOOD N. J.**

STANDARD FLOWER POTS

— AND —

JARDINIÈRES IN GREAT VARIETY.

NOTE.—Although forced to play a minor part in the Prize Pantomime, we nevertheless produce the best STANDARD POT in the country, and members of the S. A. F. soon found that to get such they must send their orders to

A. H. HEWS & CO., N. CAMBRIDGE, MASS.

Mention American Florist.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
4 inch.	500	250 lbs.
"	240	250 "
"	1750	250 "
"	1400	250 "
"	1250	300 "
"	800	350 "
"	600	350 "

It will be seen at a glance, that our pots are one-third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **SEND FOR PRICES.**

SIPPLE, POPPEL & CO., Syracuse, N. Y.

SHEEP MANURE, a natural invigorator for plants and lawns. This is a plant food of great merit, prepared with a view of supplying all the elements necessary for the perfection of plant life. **QUICK, LASTING and ECONOMICAL.**

Pulverized, 100 lb. bag \$3.00; Ton \$40.
Compressed, " \$2.50; Ton \$35.

Grapes and Pecan Red, Plum Curculion prevented by using. **PERFECT FRUIT ALWAYS SELLS AT GOOD PRICES.** Catalogue showing all injurious insects to fruits mailed free. Large stock of Fruit Trees, Vines, and Berry Plants at Bottom Prices. Address **WM. STAHL, Quincy, Ill.**

Soil for Palms.

Will some reader of the FLORIST give the positions that some of the used palms grow in naturally—if in high and dry or low moist places. Some of the palms I grow have very large long roots that lift the plants out of the pots. I suppose they grow naturally on dry soil. Seems as though we could treat these plants more intelligently when we know the conditions under which they grow naturally.

I often see in the FLORIST that peat is to be mixed with the soil for palms. The peat I know is the black soil that is found around springs where leaves and grass has lain only partly rotted for ages. Is that what is referred to? It looks as though it was of no value.

Walkerton, Ont. W. RUSSELL.

Shading Greenhouses.

Is a preparation of white lead the best thing to apply as a shade, for summer only, and if so, what is best to use with it for thinning, turpentine or naphtha? Am almost afraid to use white lead fearing it may not come off in fall, and then again whitewash requires applying several times during the season.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL INSECTIGIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes.—Half-a-Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-Pint of the Fir-Tree Oil to two or four gallons of water, or two or three table-spoonfuls to the pint.

For Red Spider and Caterpillar.—Half-a-Pint of the Fir-Tree Oil to two gallons of water, or three table-spoonfuls to the pint.

For Mealy Bug, Brown or White Scale.—Half-a-Pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoonfuls to the pint.

For Mildew and Blight on Fruit or Foliage.—Half-a-Pint of the Fir-Tree Oil to a gallon of water, or six table-spoonfuls to the pint.

Use with warm water it is quicker in its action than when cold is used.

Soft rain water is necessary, and Applied in Wood, Tin or Pot Vessels.—Galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ringworm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

Sold in Bottles and Tins.

THERE WAS an exhibition by the New York Florists' Club last week. We had arranged for a special report, but the report had not materialized at time of going to press.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

At Toronto Next August.

As one of the prime movers in causing the invitation to be extended to the S. A. F. to hold the next convention in Toronto I would like to reply to Mr. Mendenhall, and right here I want to say I am in hearty sympathy with what I believe to be the spirit of Mr. M.'s letter, though I certainly draw the line at the "wet blanket" scene, and perhaps a word of explanation will put said scene in a different light. When we Canadians decided to invite the society to hold the next annual convention at Toronto we were somewhat in doubt as to whether some of the cities of the west would not have a prior claim and in that case we would have been satisfied to wait another year. Therefore we did not think it wise to rise as soon as the announcement was made that invitations were in order, wishing to give our western brethren opportunity to claim their just dues. But seeing that they hung fire we then extended the invitation on behalf of Toronto.

We were not scared by the princely hospitality of our brethren of the Boston Club. All honor to them say I, and all honor to those noble patrons of horticulture who gave us such a feast of both mind and matter during our stay in the Hub of creation. 'Twas well methinks the said hub was well lubricated, and right royally was it done.

As to our attempting to emulate Boston, there was and is still nothing further from our thoughts. We will try, as I said at Boston, to give you one privilege we had not there, and that is to enjoy yourselves in your own way, at the same time endeavoring to make your visit as interesting as possible. We recognize the imperative necessity of allowing nothing to interfere with the business of the convention and the accomplishment of the objects for which the society was formed. It is certainly unfair to ask the executive committee to do all the work of the society and shoulder all the responsibility also, as they must do unless the members as a whole are present at the sessions to discuss and act upon the matters brought before the society.

Both the business and social features of the convention are right in their places, and the zest for the latter will be the keener for a careful attendance to the former. The social feature does not need the same advocating as the other, and it is not strange, for after 51 weeks of toil and bustle the inclination is strong to fully enjoy the other one, especially when for probably the first time in the year you are free from continuous calls upon your time and care.

It is probable as Mr. M. says, that some of the smaller cities have feared to invite the society to visit them on account of the lavish entertainment given in other cities and a disinclination to do less than

what had been already done, and it we Canadians can break the way for them by setting precedents aside the society's acceptance of our invitation will not have been in vain.

In conclusion I think perhaps the matter of porridge and coffee may well remain in abeyance for the present, both being good in their place. F. G. FOSTER.
Hamilton, Ont.

Our London Letter.

Our English friends understand fully the value of exhibitions, and show excellent taste in the arrangement and management of them. The "first spring shows," held during the past two weeks, have been very interesting, though the flowers exhibited were necessarily bulbous in the main.

That of the Royal Horticultural Society, which opened the series, was not large, owing to the very dark weather and fogs just before; there was a fairly good variety of tulips, among which I noticed the Toreador, a double red and yellow little cultivated with us, very well developed. The crocus made a fine showing at all the exhibitions; planted in round boxes about a foot in diameter, Mme. Mina, Mont Blanc, General Grant were fine masses of color. A novelty in forced roses was a yellow Banksia, trained in basket shape and full of bloom; an award of merit was given to the new amaryllis J. R. Pitcher and to the beautiful Cattleya Trianae Hardyana. Genistas fragrans and elegans are grown to great perfection boronins and ericas are also in d. Wm. Paul & Son exhibited a grand variety of cut camellia blooms, among which Mathotiana, an immense scarlet of fine shape and consistency, was conspicuous; Marchioness of Exeter, a deep pink, and Beauty of Waltham were also grand flowers. Barr & Son showed also a good variety of narcissus, among which Horsfield was one of the best; Achilles, deep color and fine open trumpet, Cernuus, pale whitish lemon; Golden Spur and the fluted scoticus seemed to be the showiest early trumpets, while among the incomparables, Leedsia, amabilis and Queen Bess were most attractive.

The Royal Botanic Society's show was delightful. The society have the advantage of handsome grounds and a fine large conservatory in Regent's Park; the military band was hidden among tall palms, eucalyptus and towering araucarias, and the different exhibits were placed around the sides and in the long glasshouse adjoining; the attendance was large and fashionable, and great interest was shown. Dutch bulbs were well forced and in great variety; the tulips especially well shown; Van der Neer, the color of which is most fashionable just now, Ophir d'Or and King of the Yellows, the best two of this color, Proserpine,

Van Vondel, white and pink, were the most showy singles; Torredor, Murillo, Salvador Rosa and Duke of York the most successful doubles. Among the hyacinths, Obelisque was the best yellow, the English favorites being for the rest the same as ours. The competition in deutzias brought out a dozen of the most beautiful plants possible. Why do we not grow more of them for Easter decorations? Their color, delicacy and readiness in forcing all recommend them. Messrs. Low & Co.'s exhibit of ericas, epacris, boronias and grevillias comprised a fine collection of these plants, which, with the pretty genistas, are most popular decorative plants both here and in Paris. Messrs. B. S. Williams & Son's exhibit of imantophyllums was the best collection I have seen, although great attention is also paid these plants by the growers for Parisian markets. A few grand plants of roses, including Henri Schultheis, Céline Forestier, Violette Bouyer, the new Tea Souvenir de S. A. Prince, and some fine polyanthas. Madame Hoste as shown was a fine lemon yellow, of good form. Cut blooms of the H. P.s Silver Queen and J. D. Pawle were very much admired. A new double white azalea, Princess of Wales, from H. Williams & Sons was very beautiful. Cyclamens and cinerarias were shown as near perfection as possible, and several good shows of dafodils which were very dwarf and stocky.

The most striking floral piece I have seen lately was an oval mirror frame about three inches wide in Van Sion narcissus, a few sprays of spirea bloom and brown ivy leaves were dotted here and there to relieve the stiffness, and at the top were four large ends of orange ribbon and a bunch of yellow roses with agrostis and ivy and mahonia leaves; at each side of the base was a bunch of ribbon and a small cluster of flowers, to conceal the feet.

F. L. V.

London, Apr. 1.

Our American Roses.

Having a desire to know how many roses this country has produced I have made a group of all the varieties of American origin, which I hope will be of some interest to the many readers of this journal. With the list we may be able to claim some recognition as the producers of some valuable additions to the varieties of the Queen of Flowers. We are young in this branch of the business and some good varieties may be looked for in the near future.

We would like to have the rose receive the same boom that the carnation is having just now, and at every place visited have the florist point out a new rose of his own.

In nearly all cases our ambition has been to produce forcing roses—however, all roses that force well under glass have proved to be good garden roses. Our best varieties have come by accident—imported from other sorts, and as yet we can not claim to have raised many pedigree or seedling roses.

Below I give a list of American varieties, their origin and by whom sent out

and a general description of each variety:

Anna Maria (Prairie; Feast, 1843), pale pink; has very few thorns; the foliage of this rose is highly perfumed.

Baltimore Belle, (P.; Feast, 1843), a blush pink, sometimes white, valuable as a pillar rose.

Queen of Prairies, (P.; Feast, 1843). A rosy red, frequently with white stripes; this rose is very much planted.

Cornelia Cook, (Tea; A. Cook, 1855). Raised from Devonensis; white, sometimes tinged with pale yellow, very large and full. This variety lacks the delightful fragrance of the parent. For a long time this rose was forced very extensively under glass, but since The Bride appeared very few are grown under glass. In The Bride we have all the good qualities of Cornelia Cook, and in addition we have freedom of bloom and a better color; for this reason C. Cook should be discarded as a forcing rose.

James Sprunt, (Beng.; Rev. James M. Sprunt, 1858). A climbing sport from Silene, the color is crimson, same color as the parent, but the flowers are fuller and larger; very desirable for the south.

America, (N.; C. G. Page, 1859). Raised from Solferino X Safrano; pale yellow with fawn center, large and full flowers; more shy than either parent.

Isabella Sprunt, (Tea; Rev. James M. Sprunt, 1865). A sport from Safrano; sulphur yellow; very beautiful in bud; an excellent garden sort.

American Banner, (Tea; sent out by P. Henderson, 1879). A sport from Bon Silene; the color is crimson striped with white; of no value except as a curiosity.

Marshall P. Wilder, (H. R.; Ellwanger & Barry, 1884). A seedling from General Jacquemont; it is of vigorous growth with healthy foliage; flowers large, semi-globular, full, well formed; color a cherry carmine, very fragrant; one of the best autumn bloomers; said to resemble Alfred Colomb, which is also a seedling of the same parent.

Rosalie, (Tea; Ellwanger & Barry, 1884). Raised from seed of Marie Van Houtte; of slender yet healthy growth; flowers small; the color is a deep pink; very free bloomer and fragrant.

Queen's Scarlet, (Beng.; Hallock & Thorpe, 1880). A rich velvety scarlet; moderately full, a good bloomer, one of our best garden sorts. By some this rose is said to be the same as Agrippina. The writer believes this to be an improvement on the old sort. The growth of Agrippina is more straggly and the color is not as good as in Queen's Scarlet. We should catalogue Queen's Scarlet and discard Agrippina.

Sunset, (Tea; P. Henderson, 1883). A sport from Perle des Jardins; the habit and growth are the same as the parent. The color of this rose is a rich golden amber or old gold; very distinct and one of the most valuable roses on our list.

The Bride, (Tea; Ho. N. May, 1886). A white sport from Catherine Mermet; in all respects save color The Bride is the same as the parent. The Bride is without a doubt the finest rose of American introduction and the best of all white roses.

Souvenir de Wootton, (H. Tea; Cook, 1888). Raised from Bon Silene X Louis Van Houtte. The color is a beautiful shade of carmine crimson; very sweet and vigorous grower. This rose caused quite a sensation when it first appeared, but I don't believe it will prove all that is claimed for it under glass. We get a great many imperfect flowers both in form and color. For this reason and the low price obtained I don't believe it will

be found profitable to force. I like the rose very much and consider it a great acquisition.

American Beauty, (H. R.; Hon. G. Bancroft. Sent out by Geo. Field & Bro., 1885). Large, globular, deep pink shaded with carmine, delicious odor. There is a question as to the origin of this rose. It is said to be an old sort sent out under a new name. However, we can claim to have found the good qualities of this variety and made it one of the most popular roses.

White Bon Silene, (Tea; Morat, 1885). A white sport from Bon Silene. The color is not a good white; of no value as a forcing rose, but having the delightful fragrance of the parent it can claim a place in the garden, as few white roses are sweet.

Dinsmore, (H. R.; sent out by P. Henderson, 1888). The color is a rich crimson; very full and fragrant. It is claimed that this rose was raised from seed of an H. R. rose. In my opinion the above rose is identical with Madam Chas. Wood. I have had both planted side by side and could not notice any difference in the varieties. If such be the case Madam Chas. Wood deserves all the praise that has been given to Dinsmore. I consider Madam Chas. Wood one of the most satisfactory roses for general planting.

White Perle, (Tea; H. Ritter, 1889). A white sport from Perle des Jardins; a strong grower and free bloomer; not recommended as a forcing rose.

Queen, (Tea; Dingee & Conard, 1889). This grand rose is a white sport from Souv. d' un Ami. In all other respects except color it is the same as the parent. Queen is not claimed to be a forcing rose, but excellent for the garden.

Climbing Perle des Jardins, (Tea; John Henderson Co., 1889). A sport from the well known Perle des Jardins with which it is identical except the climbing habit. A valuable addition to our list.

Rainbow, (Beng.; Sievers, 1889). This rose originated in California, a sport from Papa Gontier and resembles it in every particular except in color, which is delicate yellow at the base, changing to a deep pink on the outer part of the petals striped and flaked with deeper color and silvery white, making it very attractive.

Vick's Caprice, (H. R.; James Vick, 1889). A sport from Archiduchesse d'Autriche. Large, pink dashed with white and carmine, vigorous and free blooming. Ruby Gold, (sent out by P. Henderson & Co.) This rose is claimed to have quite a unique origin. A scion of Catherine Mermet was grafted on M. Niel with the result here described. The color of the flowers shows the perfect blending of the rich golden yellow of M. Niel with the delicate pink of C. Mermet. From a few stock plants that the writer has seen the characteristics of the M. Niel predominate.

Anna Cook, (Tea; Cook, 1888). A seedling from Bon Silene. Delicate shade of pink changing to white; vigorous and free blooming.

Henry M. Stanley, (Tea; Dingee & Conard, 1890). Raised from Madam Lambard and Countess Riza du Parc. The color is a rare shade of amber rose delicately tinged with apricot yellow toward the center; very full and fragrant.

Maud Little, (Dingee & Conard, 1890). Raised from Pierre de St. Cyr and Duchess de Brabant. Color soft China rose with a peculiar glowing lustrous bloom.

Mrs. Jessie Fremont, (Tea; Dingee & Conard, 1890). Raised from seed of Duchess de Brabant. Color white pass-

GROUP OF HARDY PLANTS SHOWN BY THE BUSSEY INSTITUTION AT THE SPRING EXHIBITION OF THE MASS. HORT. SOCIETY, BOSTON.

ing to a deep rosy flesh sometimes shaded with coppery red or old rose.

Golden Gate, (Tea; Dingee & Conard, 1890). From Safrano and Cornelia Cook. Color rich creamy white tinged with golden yellow; petals large and broad; said to be a promising sort.

Pearl Rivers, (Tea; Dingee & Conard, 1890). From Devoniansis and Madame de Watteville. Color is ivory white, the petals delicately shaded and bordered with pale rose.

Waban, (Tea; E. M. Wood & Co., 1890). A sport from Catherine Mermet, which it resembles in every respect except color. The color is a rich bright pink. Should this variety retain the bright color we will have a valuable rose. This is the last rose we have on our list and I am very sure it will not be the last.

Collingdale, Pa.

D. T. CONNOR.

The Brooks Place, Milton, Mass.

January 23 the writer paid a visit to the Brooks place, at Milton, and was very kindly shown around by the superintendent, Mr. Geo. M. Anderson.

Some of the finest violets that go to the Boston market are grown here. Two long ranges of frames contain some 3,500 plants, in splendid health; a 2-inch hot-water pipe runs along the front and back of the frames, no mats or shutters are

needed; the young plants are set in the frames in spring; as soon as the fall rains begin sashes are put on and tilted up back and front alternately, which keeps up a good circulation among the plants; even on cold nights a little air is admitted; no yellow leaf or spot could be seen, and finer flowers would be hard to find; Christmas week 6,000 were sent to market and since October 1 400 a day has been the average pick; the day I was there Mr. A. said he could easily pick 3,000 at once, and by the number of flowers to be seen on the plants I had no doubt of it.

The two long ranges of rose houses are planted mostly with Mermets and Brides, a few Gontiers and La France. The strong growth, large buds and luxuriant foliage showed the plants were in splendid health. The two houses contained 4,000 plants. In another house were 600 hybrids in pots plunged in the beds; they were just starting into growth and were expected to be in flower for the Easter trade.

The carnation house holds 1,500 plants, of sorts: Mrs. Fisher, Hinz's White, Snowdon, Grace Wilder, Florence and Lucifer; the two last are bright scarlet and good market sorts; all were in fine health.

About 1,000 cyclamens and as many cinerarias, some in flower and others coming, all for market, a grand batch of

Spirea Japonica, many deutzias and hydrangeas were on the way, many boxes of freesia and lily of the valley were in full bloom, and others were starting into growth; of the latter 8,000 were imported last season, also 1,000 Liliun Harrisii and candidum and 500 Indian azaleas from Belgium; these were nice bushy plants in 6-inch and 7-inch pots.

Some 2,000 chrysanthemums were planted on the benches last June, trained one flower to the stem, the blooms were large and brought ready sales, fully as many plants will be grown this year. Some 60,000 bedding plants were got ready for market last season; 25,000 geraniums were of that number. A lot of fine seedling geraniums were produced last year, the best one being named in honor of the owner of the establishment, Mrs. J. W. Brooks.

Some very fine crotons have been grown here and exhibited in Horticultural hall, Boston, on different occasions, to which prizes were awarded. Mr. Doogue the city gardener, bought out the stock last fall for use in the Public Garden and city squares next summer.

In the house where the crotons were are now many fine young palms; 500 of these were got from Belgium last fall and are much in demand in Boston for window plants.

I noticed that wherever room could be

PORTION OF MR JOHN L GARDNER'S EXHIBIT AT THE SPRING EXHIBITION OF THE MASS. HORT. SOCIETY, BOSTON.

spared under the benches, beds for the toothsome mushroom had been made; many were showing their heads and I was informed good results from many of the beds had been obtained and ready sale is found in the city.

The plants under Mr. Anderson's care in all the departments show that he is a master in the profession. He graduated from the McPherson establishment in Toronto under Mr. Geo. Vair, the veteran gardener, who has had charge over 40 years, and where perhaps the finest private collection of plants is in Canada today. Mr. A. hopes to be able to take in the convention there next August and pay his friends a visit.

W. S.

Insects and Diseases.

Conducted by CHARLES F. BAKER, Agricultural College P. O., Ingham Co., Mich.
Send specimens of unidentified insects and diseased plants to him at above address.

The Variegated Cutworm.

(*Agrotis saucia* Hubn.)

Some specimens of a cutworm were recently received from Mr. A. B. Hathaway, New Bedford, Mass., who said that they had been troubling florists in that place for a number of years. They had attacked—in the greenhouses—smilax, rosebuds, carnations, Roman hyacinths, lilies, geraniums, coleus, and in fact, nearly everything. From about the roots of one smilax plant Mr. Hathaway took nearly a quart of the worms. Dr. C. V. Riley identified it as the variegated cutworm (*Agrotis saucia* Hubn.) and states that it is quite commonly found in the greenhouses in Washington.

The eggs of the variegated cutworm are laid on the leaves and twigs of trees. This seems somewhat strange, when the subsequent habits are taken into consideration. The eggs are spherical, pinkish in color, and longitudinally ribbed. They are laid, a large number in a place, in a

single layer, and in regular rows. Dr. Lintner has found them on the branches, twigs and trunks of young apple, pear and peach trees. It would be well for any florist, should he have the opportunity, to observe on what plants in the greenhouse the eggs are deposited.

In regard to the larval stage, Dr. Riley, who has reared this cutworm and studied the various stages, says:—"The newly hatched larva is dirty yellow in color, covered with dark conspicuous spots; it feeds openly and loops somewhat in its walk. After the first moult, the dark spots become almost obliterated, and it takes on the appearance of the full grown worm, assuming at the same time the normal cutworm habit. The full grown

larva (see figure, after Riley) is about two inches long, finely mottled with dull flesh-brown and black, and has dark, velvety, longitudinal marks along the sides of the back." During the day these larvae hide—either just under the surface of the soil, or under some object lying on it. It is at night that they come out, climb upon plants and devour the foliage.

Pupation takes place underneath the surface of the ground, and the pupa is dark brown in color, and of the normal shape. There are two or three broods in a season, and the pupa stage may last from thirteen days (as in the case of some that Dr. Riley reared) to a month, or, with the last brood, over winter. The moth resembles very much, in general appearance, other cutworm moths. It requires close observation to distinguish these dull colored night fliers. The front wings of the imago of *Agrotis saucia* (called the unarmed rustic) are greyish brown, varying to reddish or black on

the anterior border. The markings are indistinct and appear like irregular bars. The hind wings are dirty white and with brown veins. The wings spread from one and one-half to one and three-fourths inches.

This insect occurs in almost all countries, but is not found very common, except in America. Here, besides the plants previously mentioned, it feeds on cabbages, corn, clover, timothy, various weeds and any field crop. Dr. Lintner speaks of it as injuring lettuce in cold frames.

A great many remedies have been recommended for cutworms. Mr. Hathaway, in his letter, states that he cleared his roses and smilax beds of them by repeatedly digging over the soil and picking them out. If this is done as long as any can be found and done thoroughly, it must certainly prevent further injury. Salt sprinkled about the roots of the plants has been found efficient. Another remedy which has been successfully tried is the placing of poisoned baits among the plants. Bunches of clover dipped in an arsenical wash (as Paris green) might be used.

Euphorbia Jacquiniaeflora.

Among the useful odds and ends we grow in our houses *Euphorbia Jacquiniaeflora* (fulgens) with its gracefully arching flower shoots helps us out often in floral decorations, or as the case may be, to set off or trim a basket or a vase. I do not mean to say that we would be able to dispose of a whole houseful of them, nor do I think that any one could sell it in quantity, but a limited number of plants would be found most useful and very profitable in every retailing florist's place, either grown in a bench at the end of a rose house where the temperature will suit it admirably all the year around, or in pots.

The plants will attain a considerable height under glass, five to six feet, and the tops of the branches will produce

GROUP OF ORCHIDS SHOWN BY MR. E. W. GILMORE AT THE SPRING EXHIBITION OF THE MASS. HORT. SOCIETY, BOSTON.

(under favorable circumstances) flowers two feet down from the tips, the flowering part always arched or bent over and the little flowers growing out upright from each axil of the leaves, forming a dense orange scarlet narrow wreath.

It is no trouble to grow them. The easiest way would be to use hardwood cuttings three to four inches long for propagating, after the flowers have been cut; stuck in sand with a gentle bottom heat they will root soon and may then be potted off into 2½-inch pots, where they may remain until May or June, when they are either repotted or planted in the end bench of a rose house and at the same time are pinched back so as to induce them to branch out. Soon afterwards a vigorous growth will be observed and they are then tied to stakes. While growing abundance of water should be given, and in November when the little flower buds begin to show in the axils of the leaves less water will be required.

If grown in pots a warm sunny situation should be selected for them and they should never be allowed to become dry. If the plants should suffer a check through want of water they will ripen off their tips and will fail to produce the longest flowering branches. By planting on a bench less care in watering is required, as the soil will not dry out so rapidly.

The flowers may be cut just after opening or remain on the plants for two months longer and be just as good and fresh then. We had the bulk of ours cut

by New Years and the few that were left over were cut at intervals between that time and March 20, and would have kept for Easter in the same condition. After New Years, or as soon as all are cut, the bench room may be used for Lillium Harrisii or anything else, and the space made to produce a second paying crop.

Rochester, N. Y.

J. B. KELLER.

The Eucharis.

This magnificent plant should be more generally grown by florists than it is, for it is the queen of all white flowers both in beauty and fragrance, and it is of easy cultivation provided it gets heat enough. With a little judicious management it can be had in flower at almost any time of the year. It is a native of New Grenada and therefore should not be grown in a less temperature than 60° at night and it also likes a little bottom heat.

If planted out on a bench plant it where it will not be disturbed, as it blooms much better for not disturbing the roots more than necessary. It does best in good fibrous loam well enriched with well decayed manure. When the plants are well established an occasional watering with liquid manure is beneficial, especially when the flower spikes are showing. It must always have good drainage, this is very important, for although the eucharis enjoys liberal watering, it must not be allowed to become waterlogged or it will be a certain failure.

In pots it always flowers better for being allowed to become somewhat pot-bound. The best time to shift them is in June or July, and they should be put in a high temperature and liberally watered both at roots and foliage, shading them in the same manner as any other soft wooded stove plant. About September keep drier, but not dry, for about six or eight weeks, then water and treat as before and they will soon show flower. With a moderate stock of plants by using a little judgment in treating them as above they may be had in flower all the time, and for fine floral work no flower can equal it.

There are two varieties of this noble plant in cultivation: *E. grandiflora* and *E. Amazonica*. The first is far superior to the other, is a better grower and is perfect in every sense of the word, while *Amazonica* is not so good in habit or shape of flowers.

Grandiflora has long, somewhat ovate leaves and the flowers are a perfect star in shape. In *Amazonica* the leaves are much shorter and rounder and the flowers are irregular in shape. This variety is very common, the bulbs having been imported in large quantities and many who have only grown this one have been discouraged with it and come to the conclusion that its merits have been vastly overrated, but if they see *grandiflora* in all its beauty they will agree with me in saying that it is the queen of white flowers.

Eucharis candida is a beautiful little gem, it is a miniature *E. grandiflora* and is very useful for small work where *grandiflora* would be large and out of place. It requires the same treatment as above. One thing in conclusion, the *eucharis* is very subject to the attacks of mealy bug and therefore should be watched carefully and kept clean, or the bug will get in the flower spikes when small and spoil the bulbs.

JAS. S. TAPLIN.

Maywood, N. J.

Star of Violets and Roman Hyacinths.

The accompanying illustration is from a photograph sent us by Mr. H. H. Battles, Philadelphia. The star is of violets with an edging of Roman hyacinths. There may be a suggestion here to the florist who gets caught with an order when about the only white flowers he has left are Roman hyacinths. And such an occurrence is not infrequent with many of those who have to depend mainly on flowers of their own growing.

The piece calls to mind the experience of a florist who received an order for funeral work late one Christmas day, the designs to be delivered the following day. He explained about the scarcity of flowers at the time, but was told that they must have a suitable funeral piece and to do the best he could. He knew it would be useless to order any particular flower, so he telegraphed a commission man in a neighboring city to "send forty dollars funeral flowers first train." The box arrived and was found to contain \$35 worth of Roman hyacinths and \$5 worth of stevia, at the ruling wholesale rates, and a note from the dealer saying these were the only white flowers he had in the place.

It seemed like a hopeless case, but though somewhat discouraged our florist went to work. He covered a pillow with the detached bells of the hyacinths, stemmed, in lieu of carnations. He gave it a little foliage and some grace by the long stemmed stevia, he massed big bunches of Roman hyacinths at the corners, and placed Roman hyacinths here and there, then he scarped up a few roses from his own houses and a little heliotrope and similar odds and ends, and by the exercise of considerable ingenuity he turned out several fairly creditable designs, so satisfactory that the bill was quickly and gladly paid.

Certainly some very laughable stories could be told by florists of the awful problems they have been put in at times through lack of proper material to work with, though with the largely increased production of recent years these trials are not so frequent. Now the rub is more to get the order rather than how to fill it.

Catalogue Tax in Canada.

Your correspondents J. E. K. and W. F. having both had something to say on the subject, neither of them have yet placed the action of the Canadian government in its proper light before your readers.

In the first place I would say that all catalogues have been dutiable for a number of years and would at any time have been charged duty had they been entered in bulk, but coming through the mails the International postal treaty in a manner prevented the Canadian postal authorities from interrupting them on their way to their destination. The post-office authorities at Ottawa repeatedly declined to take any action in the matter when brought to their notice by officials.

This state of affairs would doubtless have continued but for an enterprising

STAR OF VIOLETS AND ROMAN HYACINTHS

American seed firm on the borders having undertaken to print their large edition of catalogues in Canada and mail from there throughout the U. S., and by so doing reduce their stamp account one half at least. Although this was the first instance of Uncle Sam doing the work and Miss Canada getting the pay, and a small matter when compared with the tons of American seed, florist and nursery catalogues that annually reach Canada through the mails, for the distribution of which of course the American government receives all the payment, yet it was one too many, it could not be tolerated, and right there was where the postal treaty was violated, if, as J. E. K. implies, it was violated.

The action of the Canadian government in collecting duty upon the catalogues followed as a matter of course.

J. F. W.

Cultivation of the Cineraria.

The cultivation of the cineraria is comparatively very simple, yet it must not be understood by this that they will grow and bloom fine plants without any effort on the cultivator's part to meet their special requirements; on the contrary they require as much care as any other class of plants to be able to arrive at anything like satisfactory results.

My own experience with cinerarias, especially those sown early, say any time in June and for early flowering purposes, is that they require more care than most kinds of plants to pull them through the hot months of summer. It is a well known fact that cinerarias are very impatient of strong sun light, such as we get here in the months of June, July and most of August. And right here at the start of their culture we are presented with the conundrum: How can we artificially make this temperature that suits them best?

My method to suit them in this direction is simply to shade the glass with a thin coating of white paint; over this shading on hot, bright days I put a lattice shading. These lattice shades are made to fit over our sash (ordinary cold frame, or 6x3 feet). The bars run horizontally instead of crossing each other; they are 1 inch wide and 1/4 inch thick, the space between each bar being a trifle over 1/2 inch; the frames on which the bars are nailed are 1 inch square.

These shades I consider the best of all when shade is necessary, for the reason that they are movable in the first place and put on when really needed, and secondly, because they keep the glass cooler than any paint or canvass shading will do, thereby giving as near as possible the conditions most favorable to plants needing a shade.

I further lower the temperature by raising the sash at both ends by wooden blocks cut longer than they are wide and wider than they are thick, so that one block will raise the sash to three different heights as necessary.

Springing overhead in the morning and afternoon of hot, dry days is very beneficial to the plants under consideration.

Greenfly attacks these plants at all stages of their existence, but are easily got under by fumigation. When in frames outside I strew tobacco stems all round the pots in which the plants are growing and find no difficulty in keeping them clean in that way. In the greenhouse I seldom have to resort to any remedy for these pests, as they do not attack them much. To some this may seem strange, but the reason is quite plain, and nothing more or less in my opinion than that the cinerarias are kept in a temperature admirably suited to them, but less congenial to the greenfly, namely, 40° and 42° Fah. at night.

The soil I use for the cineraria in the early stages consists of one half leaf

CINERARIAS AT DR. C. E. WELD'S, ROSLINDALE, MASS. MR. KENNETH FINLAYSON, GARDENER

mould and one half good turfy loam with a liberal dash of sharp clean sand added. At each successive potting the leaf mould is withheld partly and the loam increased proportionately. The final potting soil consists of one fifth leaf mould, one fifth good rotten cow manure, the remaining three fifths turfy loam, very little sand, a liberal dash of fine crushed bones.

The stimulating begins when the pots in which they are to flower are well filled with roots; cow manure, liquid, I use frequently, but chiefly guano and soot in equal parts mixed. I put a large handful of the latter in a six gallon can of water and stir well with a stick to incorporate the stimulating ingredients in the water before using. I apply this dose once or twice a week as the weather demands; that is if the weather should be bright there is more demand on the water pot than there would be on cloudy days, therefore the stimulating must be regulated accordingly.

I use guano alone on most every kind of plants with the best results, and on gross feeders as cinerarias, calceolarias, chrysanthemums, etc., so apparently strong that it would make most cultivator's hair stand on end. K. F.

Jasminum Duchesse of Orleans.

This long neglected variety of jasmine is at last coming to the front again. It is a fine clean plant (with few if any insect

foes) to plant out in a greenhouse; it will bloom several times in a year, may be had in winter or in fact at any season, and when out of bloom the dark green, glossy foliage will attract the visitor's attention. If only one blossom on a plant should be opening, the whole house would be filled with its gardenia-like fragrance, so strong and penetrating is its perfume.

The flowers are pure white and freely produced from the ends of the branches, one branch bearing often as many as six to eight of them in succession. In size they are from one and a half to two inches across, generally perfectly round like a ball and so densely double that the center petals are never fairly developed before the outer ones begin to decay, although the individual flower lasts in perfection usually over a week in hot weather and much longer in winter or in a half shady position. When cut they will preserve their beauty and fragrance for a much greater length of time than a gardenia, which is too apt to fade and turn yellow.

Propagation is effected to my knowledge only by cuttings of the half ripened wood inserted in the sand bench, giving a slight bottom heat, and the young plants are at first rather slow to make growth. A great drawback to the universal culture of this by far the best of jasmines is that you have to wait several years for abundance of bloom, although one-year old plants usually bloom to some extent.

But after a plant gets fairly established and is growing freely flowers will also be quite abundant.

Almost any soil will suit the plant, though I prefer to mix one-third peat with it and think that the young plants at least show faster growth in the mixture.

Unfortunately there is not an overabundance of stock to be had anywhere, only a very limited number of plants grown in but few places either in this country or in Europe, but as there undoubtedly will be a demand for this good old thing before very long, probably we shall soon see them offered by the hundred.

Rochester, N. Y.

J. B. KELLER.

Hail.

The number of inquiries for information concerning hail insurance, and the recent rapid increase in membership is an indication that florists are coming to the conclusion that it is unprofitable to go it alone against hail storms.

The florist who procrastinates in this matter is treading on dangerous ground, and only those who are located where hail storms never come are absolutely safe from harm. However in two or three special instances we have known greenhouses to be demolished by hail in localities where their owners had previously declared "hail never came." The natural deduction is that the Florists' Hail Association is the only method of getting square with a hail storm.

Hinze's and Hill.

I picked this morning a handful of Hinze's White and E. G. Hill carnations and as the tendency with many growers at present is to give these varieties the cold shoulder I send them to you and allow you to judge of their merits.

I have a small bed of Hill that has been in fine flower all winter, in fact part of the flowers sent you were from a bed planted 18 months ago and which has been in continuous bloom since. Where are the Portias that will compare with them?

I find no trouble with Hinze's as to coming in crops, as I vary times of propagating and planting.

I also grow Lambert and find it very valuable. I believe no one white will fill the bill in every collection, some customers preferring one and some another.

My soil is light and sandy. Have had no trouble to grow good carnations except with Grace Wilder. L. L. BLAIR, Big Rapids, Mich.

[The flowers sent were certainly excellent.—Ed.]

Vanda Cœrulea.

This lovely orchid is often seen in bad condition I think through being kept in too warm a house. I find by experience that during the winter months they do finely in a temperature of 55° to 60° in a house well sunk in the ground and that is always charged with natural moisture sufficient for their wants without watering them at root only on very sunny days. When winter sets in I remove all potting material of sphagnum, etc., leaving the drainage and basket or pot only, hang them in the roof of a moist house, scarcely ever over 60° in winter. About the first of April I look them over, removing any drainage that is dirty, place a lot of fresh broken potsherds to round up from rim of pot, and over this place a thin layer of growing sphagnum which gives them a nice appearance. Water sparingly, or about enough to keep the sphagnum in growing condition, increasing the watering as the season advances. When fine weather is established ventilation should be given both top and bottom and kept open day and night. The plants should be well syringed once or twice a day. During the summer season the plants are grown 3 or 4 feet from the glass, on a bench over which is placed a rack so that circulation at both bottom and top is free. I find this rule of management is also good for Vanda Kimballiana and many of the erides. The V. K. I have grown much better with odontoglots from 45° to 55° than others in house at 60° to 70°. The plants were more robust and in every way better. Too much heat and moisture during the

dark winter days is very detrimental to many orchids, and I think the cause of spot and rot sometimes seen in collections. WM. MATHEWS.

News Notes.

PARKERSBURG, W. VA.—Robert, the 13 year old son of Mr. Adolph Hieble, died April 2.

HUNTSVILLE, ALA.—Think of everything here being frozen solid at date (April 5), with flurries of snow all through the day.

CHARLESTON, S. C.—The annual floral fair of the agricultural society will be held on the 23d and 24th of the present month.

GERMANTOWN, PA.—Wm. Woltemate, a member of the firm of Woltemate Bros., died recently and was laid to rest April 10. He was the youngest son of Henry Woltemate, one of the early florists of Germantown.

ROCHESTER, N. Y.—Mr. J. B. Keller will spend a few months in Europe this summer and will visit England, France, Belgium and Germany. He will start from home in June and will act as correspondent for the FLORIST while abroad.

PEORIA, ILL.—Easter trade much larger than last year. Supply of home-grown flowers larger and better. Retail prices some as last Easter. Ready sale for blooming plants. Increased call for loose flowers. Best Easter trade we ever had here.

EL CAJON, CAL.—J. M. Asher, formerly in the business at San Diego, which he gave up in 1884, has gone back to his first love and is now established as a nurseryman and florist at this place. Mr. Asher was the pioneer nurseryman and florist in San Diego county, starting business in 1869.

HARTFORD, CONN.—The largest Easter trade for many years. Supply of home-grown flowers better than last year, both in quantity and quality. Retail prices on spring stuff such as hyacinths, tulips, valley, narcissus, etc., were somewhat lower than last year, but good roses and carnations brought their own price. Increase in the call for loose flowers. More satisfactory than any previous Easter.

CINCINNATI.—The 30th monthly meeting of the Florists' Society was very well attended and some new names were added to the list of members. A committee was appointed to prepare a premium list for the coming chrysanthemum show. Mr. T. W. Hardesty read quite an interesting paper on the artistic arrangement of cut flowers. Business is very good and spring trade promises to be excellent.

CAMDEN, N. J.—Easter trade was very much larger than that of last year. One florist reports it as nearly double with him. Very good supply of home-grown flowers. Retail prices were about the same as last Easter on plants, a little higher on cut flowers. Increased call for blooming plants. Increased call for loose flowers over made-up work. Much more satisfactory than any previous Easter. Cut flower trade very good since Easter.

SYRACUSE, N. Y.—Easter trade was an increase of about 10 per cent over that of last year. Had a larger stock of home-grown flowers and they were of better quality. Retail prices were about the same as last Easter. Increased demand for

blooming plants. Tendency of demand is steadily in the direction of loose flowers in preference to made-up work. Sales fully up to the average in amount of stock disposed of with a tendency toward lower prices.

BRIDGEPORT, CONN.—Easter trade was about 25 per cent larger than last year, and supply of home-grown flowers was of better quality. Retail prices same as last Easter. Blooming plants were scarce and in less demand than last year. The call was nearly all for cut flowers. Best Easter trade we have had. Large demand for Bermuda lilies in pots at prices ranging from \$1 to \$1.50 each. The only trouble with this stock is that it is difficult to deliver in good condition.

Boston.

The market is heavily overstocked with roses at present, but at low prices they seem to be worked off fairly well.

Carnations of good quality are still scarce, and bring holiday prices. A new seedling carnation raised by Ernest Fewkes gives promise of being a valuable market variety. The blooms are very large and well formed, showing no tendency to burst, and the color, somewhat deeper than Grace Wilder, is all that can be desired. Blooms that had been cut on March 30 were shown on April 11 at Horticultural Hall, a pretty good indication of valuable keeping qualities.

Col. Henry W. Wilson's lecture before the Horticultural Society on April 11 on a trip to the Bahamas, was one of the most entertaining of the whole series. The colonel is a very interesting speaker.

James Comley exhibited a table of 75 hybrid perpetual roses, comprising 35 of the best varieties, all beautiful specimens. The Boston Horticultural Society turned up well at the spring exhibition of the New York Florists' Club, ten of them going over together on the Fall River boat.

The exhibition received unstinted praise, which it well merited, and the boys all felt that they had been fully repaid for the journey. W. J. S.

Shading Greenhouses.

In answer to subscriber, page 674, common gasolene is the best "thin." A lump of white lead the size of a hazel nut is sufficient for a gallon. This may be colored by the addition of a little pure chrome green if desired, and in the above proportion may be thrown over the glass by any syringe or pump. It may perhaps be necessary to use a long-handled brush dipped in lye to loosen it in the fall, when raining. JAMES MACPHERSON.

Trenton, N. J.

Catalogues Received.

A. Blanc & Co., Philadelphia, cacti; Kemble Floral Co., Oskaloosa, Iowa, plants; V. Lemoine & Son, Nancy, France, plants; McGregor Bros., Springfield, O., plants; Geo. L. Miller, Stockton, O., nursery stock; J. F. Sullivan, Detroit, Mich., plants; N. Steffens, New York, wire designs.

THE Gardeners' Club of Baltimore has issued an advance list of premiums for the fall exhibition and chrysanthemum show to be held next November. Premiums to the amount of \$654 are offered, of which \$441 is for chrysanthemum plants and flowers, \$116 for miscellaneous plants, \$83 for floral arrangements and \$41 for flowers other than chrysanthemums.

HINTS ON CACTI is the title of a little book sent us by A. Blanc & Co., Philadelphia. It is very liberally illustrated with engravings of the numerous forms of these interesting plants and is well worth a perusal. Mr. Blanc has done much to bring to the attention of the public the value of cacti as ornamental plants and his "Hints on Cacti" will undoubtedly be an important factor in strengthening their hold on popular favor.

A COPY of the Nursery-Book, by L. H. Bailey, has been sent us by the Rural Publishing Co., New York. It is a handbook for the propagator and gives short, concise descriptions of the various modes of multiplying plants. It is liberally illustrated and the list of plants is arranged alphabetically so that reference is easy. There are also ordinal and general indexes. It should prove a convenient reference book.

WREATHS of flowers now often take the place of crape as a badge of mourning, and purple crocuses are very useful for the purpose. The wreath is tied to the door bell with a bow of purple ribbon. These flowers are especially valuable for the purpose in frosty weather as they are not injured by a few degrees of frost.

IF YOU LIKE THE AMERICAN FLORIST give it your fullest support by confining your orders to those who advertise in its columns and mention the paper when ordering.

FROM Eberfeld, Germany, comes the statement that 300 gardeners are on strike.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By a gardener with many 5 years experience in the different lines of the business. Address C. D. care American Florist.

SITUATION WANTED—As foreman in a first class nursery and greenhouse business, capable of meeting all demands. Through knowledge of the business. References. Address J. H. Florist, 122 Church St., Frankford, Phila., Pa.

SITUATION WANTED—By an experienced gardener, either commercial or private, location in New England States preferred. Can furnish first class references. Address E. care Wm. J. Stewart, 67 Bromfield St., Boston.

SITUATION WANTED—As gardener by an Englishman, understands growing grapes, peaches and all kinds of fruits, flowers, vegetables, ornamental trees and shrubs, also raising stock, wife good cook if required for a domestic, 4 years in America, private preferred, good reference. The Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

The Government Seeds.

Under the appropriation act of Congress, from July 1, 1888, to June 30, 1889, the whole number of packages sent out was 4,852,512. Of this number 4,018,031 are vegetable and flower seeds, leaving only 834,481 of all other kinds, mostly under the head of field seeds. But among these 548,099 packages are turnip seeds! There are left only 150,910 packages which might possibly prove to be really of any value—about one-seventeenth part of the whole. And this agrees wonderfully well with what we have previously said in these pages, that if the government should appropriate \$5,000 for the Seed Division for its legitimate use, the dissemination of new and valuable seeds it would be ample. As far as relates to vegetable and flower seeds, we say, without fear of contradiction, that the Seed Division has never sent out a new and useful variety. In the nature of the case they cannot do so, since they procure their stock of these seeds from the seedsmen who have already put them on the market. In the very last report of the Secretary of Agriculture, 1889, correspondents who have received vegetable seeds report on the value of Early Mohawk and Early Red Valentine Beans, Danvers Yellow Onion, Champion of England Peas, the Deacon Lettuce, All Seasons Cabbage, and some others, all of which have been sent out by seedsmen, and most of them for many years. According to the tabular statement, Senators, Representatives and Delegates in Congress were given 3,732,132 packages, leaving only a little over a million to be sent to individuals, Experiment Stations and agricultural societies. And this explains why the Seed Division has grown as it has, and Congress is willing to make appropriations for it. Politicians own it and use it for their own purposes, while the original purpose for which it was established has vanished from sight.—*Vick's Magazine* for April.

[While this does not exactly tally with the recent article in the *American Garden* on this subject it is much nearer the practical truth as it comes from one who knows the seed business better than practical politics.—Ed.]

Government Seeds.

"About thirty bushels of wheat and garden seeds were sent into this State the past year from the Agricultural Department under the frank of Congressman Hansborough and Senator Pierce, which were a great damage to our people. The wheat, instead of being pure Saskatchewan, had no less than four different kinds in each quart package, also oats, barley, and cockles; hence it was a failure. The garden seed was too old and failed to grow. We do not know how far the influence of these seeds extended politically, but we do know that a good many of us were beaten out of a good garden last year, and have lost faith in the Agricultural Department; and members of Congress who have an ambition to succeed themselves would do well to put but little faith in the assistance they may get from scattering worthless garden seeds among

their constituents, and thereby bringing down wrath upon their devoted heads. We don't like to be humbugged at our own expense. Of one thing you can rest assured, the Farmers' Alliance of this State has got through making applications for seeds from this department, for we sometimes think their action was a plan to destroy our organization and build up the Republican party.—*No. Dakota Independent*.

Customs Regulations.

The remarks upon my communication in No. 148 of the *FLORIST* were impartial and to the point; the appointment of a General Board of Appraisers will, I believe, ensure that intelligent consideration of protests for which the Secretary of the Treasury was neither fitted nor had time to bestow.

I agree with you that the reasoning of the collector at your port was absurd, and indeed was in direct conflict with the decision of the Board of General Appraisers in the case which I furnished, wherein they said: "The importers intention is not material if the plants are of the kind specified, * * * * * as a matter of fact they are of a kind chiefly grown under glass," and the Board decided in favor of the importer.

Largely with you that the reasoning of the collector at your port was absurd, and indeed was in direct conflict with the decision of the Board of General Appraisers in the case which I furnished, wherein they said: "The importers intention is not material if the plants are of the kind specified, * * * * * as a matter of fact they are of a kind chiefly grown under glass," and the Board decided in favor of the importer.

MRS. S. P. CUSHING, Weymouth, Mass.

Philadelphia.

Business has been fairly good since Easter. The crop of spring weddings was well distributed, and this with dinners, children's parties, etc., has kept the stock of flowers moving.

Quite a number of the trade paid a visit to New York to see the flower show of the N. Y. Florists' Club. It was a very fine show, an artistic success, and all left amply repaid for their visit, aside from the manner in which they were royally entertained.

The collection of baskets entered for the Jansen prize, twelve in number, were very handsomely arranged, and before the judges went around there was a number of opinions expressed as to which would be the winner. Among some dozen florists present the choice narrowed down to three or four baskets—it would be one of these, the others were not "in it"—but when the five ladies made their selection the premium card was attached to the very poorest in arrangement both of color and flowers were passed by unnoticed. We are almost certain that if the ladies had been asked to each carry a basket away with them the one selected by all would have been left on the table. Some things are past finding out, and this is one of them.

E. G. Hill and D. B. Long were in Philadelphia Saturday last.

Robt. Craig is erecting two large palm houses, and we hear of other additions among the trade in the near future. P.

Toronto, Ont.

The regular meeting of the Gardeners' and Florists' Club was held on the 8th inst. and was very well attended, in fact the attendance seems to improve each succeeding month.

The feature of the evening was a paper by Mr. W. Hill entitled "Plants most suitable for Easter." The discussion seemed to center round geraniums (cylisus) and Lilium Harrisi, the latter being unanimously acknowledged as the plant most suitable for Easter.

A telegram from Mr. John Young, wholesale florist of New York, to Mr. Dale, rose grower, Brampton (near Toronto), was read by the president: "Rosses finest in the world; send more to-morrow," and the applause which followed shook the building.

Mr. H. A. Bunyard, travelling for Messrs. Pitcher & Manda, was present, and after some pressing by the president delivered himself of a brief but eloquent oration pregnant with matter of interest to horticulturists which was received with vociferous plaudits by the assembled multitude and which being recorded in the minute book of the club will be handed down to posterity as a model of brevity, eloquence and deep thought for the guidance of our children and children's children.

The club is rather behind hand in the matter of its annual chrysanthemum show in November next, but the executive will take it in hand next week and hustle things generally in connection therewith.

Easter weather here was all that could be desired and florists benefited accordingly. Prices ruled about the same as last year, some lines perhaps a little higher. The supply was about equal to the demand except in Lilium Harrisi, which were backward this year owing to bad weather, late spring and early Easter. The volume of trade was undoubtedly larger than last year. E.

JOHN H. SIEVERS,

25 Post Street,

SAN FRANCISCO, CAL.

Chicago.

A preliminary announcement of premiums to be awarded at the fall exhibition of the Horticultural Society of Chicago has been issued. The cash prizes offered foot up to \$2,135 and this will undoubtedly be considerably increased later by special premiums. Of the amount already offered \$668 is for chrysanthemum plants and cut flowers, \$475 for floral arrangements, \$174 for cut roses, \$68 for cut carnations, \$300 for miscellaneous plants, \$224 for miscellaneous cut flowers, \$100 for window gardening and \$110 for fruits. Copies of the list may be had on application to the secretary, Mr. Jas. D. Reynolds, Riverside, Ill.

Mr. George Schneider, president of the Horticultural Society of Chicago, has been elected a member of the board of directors of the World's Columbian Exposition. As he is a warm advocate of any measure tending to the advancement of horticulture his election to the board is of decided interest to the readers of this journal. Mr. Schneider is president of the Illinois National bank.

At the last meeting of the Florist Club a plan suggested by members of the Horticultural Society for the erection and maintenance of a horticultural hall was discussed at considerable length.

The Horticultural Society of Chicago held its regular quarterly meeting at the Palmer House last Saturday afternoon. Sixteen new names were added to the membership list, among the number being several of Chicago's best known citizens. Ways and means of securing the erection of a horticultural hall were discussed and it was suggested by President Schneider that a stock company be formed to erect such a building as would meet the requirements of the society, and he mentioned several possible sources of income which would materially lessen the expense of maintenance. A vacancy in the board of directors was filled by the election of Mr. J. W. Ellsworth. At the next meeting a paper will be read by Mr. J. A. Pettigrew, Sup't of Lincoln Park, upon a subject of his own selection and which will be announced later.

Philadelphia.

EXHIBITION ECHOES.

It is with sincere regret that I have read an article by E. L. in the FLORIST—under the above title.

I had the honor of being on the Committee of Arrangements and, with Mr. John Nisbit, was in charge of the cut flowers. In the performance of my duties I was at the hall while the flowers were being staged, as well as a great deal of the time each day and evening during the exhibition, and during all that time I did not hear the slightest intimation that any flowers exhibited were not grown by the person in whose name they were entered.

As far as I am concerned I will say that I never at any exhibition entered or displayed any plant or cut flower but what was grown in my own houses. The other growers exhibiting cut flowers were John Burton, Edwin Lonsdale, John Foulds, Coles & Whitley and H. E. Chitty. I do not believe that any of them were guilty of what has been charged.

JOSEPH HEACOCK.

You will benefit the AMERICAN FLORIST by mentioning it every time you write an advertiser in its columns.

FISHKILL N. Y.

DAISY SNOWFLAKE

Daisy Snowflake—This Daisy, if treated like Violets, will give splendid returns for all labor bestowed upon it. I grow it by the thousands and can not supply the demand for cut flowers, as it keeps fresh from 2 to 3 weeks after being cut, and then looks as fresh as other white flowers just cut. The flowers are borne on stout long stems, fine white and beautifully quilled, and average as large as a 50-cent piece; a great acquisition to florists.

Price, 81 per doz. free by mail; \$5 per 100 by express.
SEE WHAT F. J. KELLER SAYS ABOUT THIS DAISY:

ROCHESTER, Jan. 25th.

Daisy Snowflake is quite a useful flower both for floral designs and put in with cut flowers, and when tied up in small bunches they sell very rapidly with us for funeral designs. We use a great many in place of carnations as it is cheaper and covers almost the same space and keeps from considerable longer. Be sure and send me every Daisy you can cut, as I cannot get them fast enough for my customers. They sell at 1¢ the best cut flower, 10¢ because it keeps fresh for 2 to 3 weeks. I feel I can't say too much in favor of this useful flower.

Yours truly,

F. J. KELLER.

MISSION RIDGE GREENHOUSES,

CHATTANOOGA, TENN. Miss L. O. L. FRED. SCHNEIDER, DEAR SIR:—We received our Daisies yesterday and Daisies they are! Enclosed please find our check for \$2.00 for 100 more plants. Please send them as soon as you can, as we want to get them to bloom as well before Easter. Can you supply the cut blooms and at what price? They ship so excellent that we would like to get some for immediate use.

Very resp't
P. S. We add to our remittance, please send its value in Cut Flowers of the Daisies with shipment.

STANDARD FLOWER POTS

— AND —

JARDINIÈRES IN GREAT VARIETY.

NOTE.—It makes us smile to see how some
manufacturers have to advertise cut prices (in
the busiest part of the season) to sell a stock of
first prize pots. We have been unable to fill
orders promptly for three months.

A. H. HEWS & CO., CAMBRIDGE, MASS.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness,
smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT**
of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/2 inch.	3,000	250 lbs.
" 2 1/2 "	2,400	200 "
" 3 1/2 "	1,750	150 "
" 4 1/2 "	1,350	110 "
" 5 1/2 "	1,200	100 "
" 6 1/2 "	800	70 "
" 7 1/2 "	600	50 "

It will be seen at a glance, that our pots are one-
third lighter than formerly, and yet we claim that
owing to the superior quality of our clay and im-
proved machinery, they are stronger than any pot
in the market, and we frankly ask you to make the
test. **SEND FOR PRICES.**

LATEST ADVICES from Holland (Harlem, March 28) indicate much uncertainty as to prices for the 1891 crop of narcissus (which they predict will advance) as well as spinners and clematis. Some growers intimate that the prices of hycincinths and tulips will be about the same as last year.

You can give the AMERICAN FLORIST your fullest support by confining your orders to those who advertise in its columns, and when ordering mentioning the fact that you were induced to order by the adv. in the FLORIST.

New York.

The Florists' Club's show, so anxiously looked for, is over leaving behind in the minds of the general public many pleasant memories, and in the minds of those in the trade a conglomeration of pleasure and disappointment with a flavor of animosity. It was undoubtedly the finest exhibition ever given here, anideal flower show.

Never was anything gone into with such a wave of enthusiasm and good feeling. It brought together all the long lost lords of friendship and tied them together in a circle of roses only to break again at their death.

All day Monday vans and wagons filled with floral beauty could be seen drawing a circle round the Lenox Lyceum. They came from far and near, from conservatories perched among the hills that line the Hudson, and from the commercial houses of the surrounding towns. At midnight an army of horticulturists and designers headed by John May and Ernst Asmus took possession of the different floors and by noon Tuesday the halls were transformed into a lovely picture. The exhibition was opened to the public at 7 p. m. on Tuesday and remained open till Saturday the 11th.

The entrance to the hall was handsomely decorated with southern shrubs and mosses which completely hid the ceiling and gave a tropical effect. Below this, ranged along the walls, were fine specimen conifers in pots botanically named. They were loaned by Messrs. Chas. Bird and Parsons. In the vestibule the same style of decoration was continued with fine vines embellished with smilax and asparagus along the walls. Here were placed some large specimens of cycas and palms. The top tier of boxes around the main hall was handsomely draped with southern smilax that blended well with the yellow plastic carvings beneath. Here and there a group of palms hung over adding an aredritic touch to the scene.

Immediately on entering the hall the visitor stood before a mountain of golden genistas exhibited by James Denu. On each side the entrance and arranged around the hall were the entries in the classes for palms and foliage plants, most artistically arranged by their owners. Messrs. Bonn & Dressell, Siebrecht & Wadley, Clark and Pierson. The next circle was composed of stove plants and ferns exhibited by Brett, Pursell, Bennett and Rose. The third circle of beds were the azaleas, hydrangeas and other flowering plants exhibited by Dean, Roehrs, Brett and Bergmann. The center was filled by some magnificent palms and dracenas exhibited by Bennett and Brett. Among these were some of the finest palms ever seen here and they formed a grand center piece for the exhibition.

The stage was turned into a bank of orchids exhibited by Pitcher & Manda and Forstermann. These were so arranged as to allow the visitors to feast their eyes on each specimen by being able to roam among them on walks lined on each side with fine specimen ferns in the midst of which a fountain of water rose high in the air falling over electric lights with many colored globes down to the water lilies and other aquatics below.

Standing here and looking back the scene was truly magnificent. At our back the jewels of the floral kingdom seen through the falling spray of the crystal fountain, at our feet groups of Adiantum Farleyense guarded by the whole family of adiantums, and far away spread before the gaze was a picture of beauty words are powerless to describe. Here groups of beautiful hydrangeas in every shade of pink, blue and white, there groups of palms soaring high above and waving their graceful arms over all, in some instances a fine nepenthes adding a graceful touch, and ranging far away were beds of glorious azaleas in every imaginable color, to where their soft snowy hues blended with the mountains of genista. Truly a valley of grace and beauty flanked by golden hills that seemed to reach the blue tinted dome, where many hundred electric lights shed their soft light upon the beautiful scene below.

Whatever may be said of this show it must be admitted by all that the plants and flowers and the general arrangements shown were the finest ever seen here, and much credit is due to Messrs. Dean, Bennett and Brett for their grand contributions to this display.

Turning through an avenue of palms the visitor descended to the lower hall. Here broad benches were placed around the wall upon which were placed the cut rose exhibits. This was the finest exhibition of cut roses ever seen here and perhaps anywhere else. Every rose at present in cultivation here was shown in perfection from Don Silene to American Beauty. Every rose grower of note was very creditably represented and many new roses were shown for the first time, a bunch of Waban exhibited by Mr. J. N. May attracting much attention. Another new rose shown by Mr. J. Roehrs named Jennie Dixon was greatly admired. It is similar in form and color to Countess of Oxford, but quite distinct and promises well. Among this collection was a bunch of flowers sent by H. Dale of Brampton, Ont. They were fine, the finest of their kind ever seen here. Another bunch of roses came from J. H. Dunlop, Toronto. These two lots of roses caused much comment and many decided to pay their home a visit on the occasion of the S. A. F. convention next summer.

Carnations came in from everywhere and they rivaled the roses in color and perfection. They were a great attraction.

There was warm competition in this class as a silver cup had been offered for the best new one. It was won by Sea Gull, a beautiful white carnation, strong, robust, symmetrical and with perfect calyx. Like the bird it is named after, it is bold and handsome; may it continue to win success and bring prosperity to its owner, Mr. E. G. Hill, of Richmond, Ind. Lizzie McGowan was its greatest rival and it took the judges a long time to decide between the two. There were

ARRANGEMENT OF THE HALL AT EXHIBITION
OF THE NEW YORK FLORISTS CLUB

very many beautiful new carnations on exhibition, an army of them, showing the present great interest in this beautiful flower.

Next came a circle of beds of herbaceous flowers, flowering shrubs, roses in pots, lilacs, cinerarias, herbaceous calceolarias, cyclamens and many other flowers in pots.

Inside this circle the retailers' exhibition was given. Dinner tables were set out, stands of bouquets, lines of baskets, funeral designs, etc. This portion of the exhibition was not what it ought to have been for a city like New York. The events in this department were so arranged as to give the retailers an opportunity of competing in all the classes, and make it an inducement for the public to visit the exhibition each day. Tuesday there were five vases of roses shown in three classes. Stumpff won first prize in the hybrid class with a green Moorish vase of 100 Baroness Rothschilds, and first in the Mermet class with a similar vase of 100 Mermetts. Dards won first in the tea rose class with a vase of 200 Cusins and Brides.

On Wednesday there were five competitors in the dinner table decorations, and in justice to the competitors it must be said that the tables supplied were the most inconsistent for an exhibition, being long tables 9x5 with a supposed capacity for twelve diners, they looked more like ordinary restaurant tables than tables intended to display the decorator's skill.

Stumpff won first prize in this class. His table was set for 12 in a service of elegant cut glass with two silver candelabra bearing pink shades adorning the center, between them was an oblong basket of Madam Gabriel Luize roses with no other green but their own foliage, and with buds of the same rose arranged between to give a natural and graceful effect. The ladies' favors were small English garden baskets, the handles of which were trimmed with pink ribbon. A small Adiantum Farleyense was placed

in the center of this basket, one fine Luize rose, then a bunch of moss roses drooping over the side. The gentlemen's boutonnieres were composed of four Lizzie McGowan carnations pressed into one.

The second award was given to Le-Mout who had decorated his table with a mound of ferns and spring flowers.

The Ellis Co. got third on their table, which was decorated with violets and Baroness roses and plates of violets for ladies' favors.

Herman Kuhn had a table which was handsomely decorated with Baroness roses, but unfortunately he introduced a novelty in draping his table around with garlands of smilax.

Stumpff was awarded first prize on wedding decoration. This was an original design. It was composed of an arbor of graceful palms behind which stood a large mirror. In front of this mirror were hung three porcelain Japanese vases filled with A. Farleyense and orchids. At the entrance to the arbor was placed a kneeling bench and altar rail over which was thrown an embroidered satin cover. On the right of this stood a tall Moorish vase in which 300 Bride roses were arranged. A garland of these roses fell carelessly but effectively over the rail. On the other side stood a group of Merveille de Lyon roses in pots, surrounded by ferns and foliage plants. Beneath the palms and forming an arch over the rail were bougainvillea vines in bloom, the color of which being light lavender, contrasted well with the white roses below. There were several entries for the bridal bouquet, which class was also captured by Stumpff with a bouquet of lily of the valley and orange blossoms; Foley coming in second with one of valley and narcissus.

The greatest competition was when the Jansen basket came up. There were twelve exhibits in this class, which was a small handle basket to be filled in any way the artist desired. There were many elegant baskets made, but the poorest of them all was awarded first prize. Why, no one knows, but this along with other decisions that seemed unexplainable caused much bitterness and kept many from competing afterwards. Who are the best judges of flowers? The people that grow or the people that buy? Who are the best judges of floral art? The woman who once in awhile buys a cheap basket or the man who has made it a life study? These were questions that one could hear after the decisions were rendered, and surely no one outside the judges themselves agreed with some of the decisions given.

On Thursday there were more baskets of flowers in several classes. The first prize was awarded to Alex McConnell, the best basket of orchids to Siebrecht & Wadley, the best vase of 100 Jaqs to Chas. A. Dard.

On Friday funeral designs were shown. Foley won first on the original standing design. It was a candelabra made of natural flowers. There were many other designs, but none worth special mention.

The mantel decorations, of which there were two, were very poor and unfit for presentation at such an exhibition.

There were two competitors in the drawing room decoration, Stumpff and Warendorf, but the same principle prevailed as in the Jansen basket affair, and Warendorf got first. This decision raised a storm and was ignored by all who frequented the rooms. In Stumpff's decoration the finest material obtainable was used and artistically arranged; in Warendorf's the most common things were used. Just imagine a fine drawing room where the gas fixtures were completely covered with southern smilax and underneath a table of southern smilax, a mound of Lilium Harrisii, the corners of the room filled with nothing but southern palm leaves stuck in moss. It was one of the most absurd judgments ever known.

Such judges should be avoided, for in addition to showing a lack of good taste and refinement they create bad impressions on the minds of the trade and fill all with disgust.

All in all this exhibition was artistically the finest ever held here, but owing to some cause—some attribute it to management, others to ladies connected with it—it was a financial failure. The advertising part was miserably conducted, the papers consequently ignored it, which resulted in a poor attendance and an empty treasury.

The exhibition was attended by many prominent members of the craft from distant cities.

JOHN YOUNG.

New York Parks.

ED. AM. FLORIST.—The strictures of your New York correspondent on the floral decoration of our parks do not seem to me to be quite just.

As one who has enjoyed the park plantations (though without further interest in the matter) permit me to say that considering the means at the disposal of Superintendent Parsons it would seem to some of us that a very good showing and continual progress has been made.

In the smaller parks I find beds of spring blooming plants, pansies, Bellis perennis and Dutch bulbs, and these are

FUNERAL DESIGN SHOWN AT THE NEW YORK
EXHIBITION

usually followed by showy foliage plants, acalyphas (largely used), coleus, geraniums, etc., and in all basins a good collection of aquatics. In Madison Square aquatics are omitted as this park is especially a children's play ground.

In Central Park the Nelumbium speciosum is being naturalized in the lakes. Much use is made of bedding plants, while planted along the east and west drives and in suitable locations is one of the largest collections of flowering shrubs

VIEW AT THE EXHIBITION OF THE NEW YORK FLORISTS' CLUB.

and hardy herbaceous plants in the country. From the nature of these of course many visits during the season would be necessary to note them properly as they come into bloom. Of course if the seasons were accented by great masses of plants, as rhododendrons for instance, it might be a great gain, but any one who is aware of the great care, expense and storage room required for a representative collection (as Mr. Hume's collection for example) must be aware that such effects are quite beyond allowances made for park purposes. On enquiry I find several hundred thousand hardy and some half a million bedding plants are being propagated this season.

While it is the wish of every flower fancier that the list of park plantings could be increased, yet when it comes to the matter of detail it will probably be found that even an enterprising New York Florists' Club will be unable to agree to advise many additional available plants especially for the smaller parks.

J. N. GERARD.

The Conservatories of Chas. Dissel.

Just out of the "Quaker City" amongst the rolling hills and densely wooded ravines of the Keystone state are situate at Wynwood the residence of Chas. Dissel and his conservatories, which latter under the guidance of David Emory and his

careful gardening has made it the leading place in this section, and thoroughly captivated the interest of his employer, who is as well posted on things horticultural as one would wish.

The conservatories though not extensive as some, are replete with all the good things a greenhouse should contain, from the exalted orchid to the (now) "humble" perlargonium.

Great care and discretion has been exercised in planting out the center bed of the main house, both for general effect and usefulness. That distinct palm *Phenacophorum sechellarum* always asserts itself and is a fit companion for *Vershaeltia splendida*; scarcely equalled for this work they are of little use for "house decoration" on account of their tenderness.

Standing over a pool of water in the center of the bed where gold-fish disport themselves, and "water lilies grow" are two fine specimens of that beautiful gymnogramme, *G. schizophylla* and other moisture loving plants.

Growing like so much corn is the peer (in my estimation) of all foliage plants: *Heliconia aurea striata*, and as the name describes, it is striped with gold from the midrib to the edge of its large lanceolate leaves.

Aralia rubra (new) and *A. filicifolia* (fern-leaved), are both very pretty and appear to like the liberty accorded to their roots, as do the many other foliage

plants, as dracenas, crotons, dieffenbachias, anthuriums, etc.

Amongst all this wealth of foliage, and standing out in both relief are the immense bracts (2 feet across) of *Poinsettia pulcherrima* and its variety *plena*, also the long (12 to 18 inches) scarlet racemes of *Euphorbia jacquiniiflora*, both good for cutting, the latter especially so.

Orchids are a leading feature here, and Mr. Emory succeeds well in his efforts to improve each new leaf and bulb made. The *phalenopsis* fully sustain their reputation as "king" of this "order" here; their "subject" says that he has fed them during the growing season with a liberal supply of dissolved cow manure, and if their present appearance vouches anything, I should say it is the right thing to do. The lovely mauve *P. Schilleriana*, the pure white *amabilis* and *grandiflora*, also those unique and pretty varieties, *P. Sanderiana* and *Stewartiana* are all heavily laden with a profusion of well-formed flowers, and at a marketable value would go "way up."

The cattleyas and *lælias* have well repaid any little extra care, and I noted some remarkably fine varieties. *Angraecum virens* and *A. sesquipedale*, the latter particularly attractive with its immense fleshy flowers of waxy whiteness.

A grand form of *Dendrobium Wardianum*, the pure white *D. Dearei*, and *D. formosum* giganteum with flowers as

large as an ordinary cattleya, also the useful *D. noble* are the best of this section now in flower.

Cypripediums are favorites here and the varieties with mottled and tessellated foliages, like *C. Lawrenceanum*, *Hookeri*, *Argus*, *barbatum*, *Veitchii*, etc., show to what advantage these pretty little subjects can be used when stood amongst choice ferns, and foliage plants and where shade does not materially interfere. Varieties of insignie, *C. Harrisianum*, *Curtisii*, *bellatulum* and that continuous bloomer *C. Sedeni* were amongst the many in flower.

Celecyne cristata, many *oncidiums*, *odontoclossums*, etc. are in flower and many other species and varieties give great promise.

Another feature here is the standard abutments with 4-foot stems and heads quite three feet and blooming profusely. Mr. Emory says they are struck in March and potted on continually till they reach their present size. The variety tall they reach the Golden Fleece Fire Ball and the cold white. The standard *heliotropes* which match the foregoing in size are treated similarly.

In the stovehouse are good examples of *Geonoma gracilis*, *Davallia Mooreana* and the beautiful *Cyathena dealbata* with silver under foliage.

Among the display of "Pelars," primroses, "Cinners" and "bulb stuff" are what one rarely sees in the American garden. *Lachenalia*, very useful at this time of the year for greenhouse decoration and are easily handled; *L. pendula* with its spike of drooping carmine flowers is the best and most useful.

Lapageria rosea and its variety *alba* as seen here do well, and bloom profusely if planted out in a house with a temperature of 55° to 65° or less; if planted side by side and allowed to intertwine the effect is very pleasing.

A plant of *Musa* recently grown from seed last spring and planted out in the house measured 5 feet 9 inches in circumference at the base; would that money would grow as fast.

February. THE DRUMMER BOY.

Platyceriums.

The *platyceriums* or Stag's Horn ferns form one of the most distinct and interesting groups that are found in all the vast fern tribe, and are certainly worthy of more extended recognition than they have thus far received.

Of course it is well understood that they are not likely to become just the plants for every one's local trade, but at the same time there are some of them that will stand considerable exposure without much injury, and they are all admirable for greenhouse decoration, providing the conditions are such as would be favorable for fern growth.

The members of this genus are epiphytically in habit, and for this reason are most happy when grown either on a section of a tree fern stem or block of wood or in a basket, though this treatment is not absolutely essential for all, as some of the species can also be satisfactorily grown in pots.

But in either case the potting material must be of an open, easily drained character, the best soil being rough, fibrous peat, or peat and sphagnum, and as such soil soon dries out frequent waterings will be found necessary.

In order to keep the foliage in good condition it is best to keep the water off the leaves as much as possible, especially in the winter, as at the latter season these may soon be discolored.

The propagation of the *platyceriums* is not a very rapid process, and depends on two methods, viz.: either by means of seeds or spores, or by the production of young plants or suckers from the roots, the latter practice being common to most of the species, and the young plants so produced being readily separated from the parent plant after they have made one or two fronds. If spores are resorted to they should be sown as soon as possible after they are gathered, using a coarse compost of peat and sand on which to sow them, and keeping them moderately close until they show signs of germination, after which they need rather careful watching in order to prevent them from damping off.

The spores of these plants are somewhat slow in germinating at best, and it seems a rather uncertain operation too, but the only safe plan is to give them a fair chance and not to empty out the seed pots in disgust within six months after sowing.

The first species in cultivation and doubtless the most widely known is *P. alcicornis*, the common Stag's Horn fern, which was introduced from Australia about the beginning of the present century. In common with the other members of the genus this plant has fronds of two very different types, the barren ones being more or less flat and shield-like, while the fertile leaves are upright in habit and deeply cut into such long, narrow lobes as to clearly indicate the reason for its ordinary name, the ends of these lobes drooping over in a very graceful manner. This is probably the most hardy member of the genus, and can be readily grown in a night temperature of 50 degrees.

A considerable improvement on the above is a specimen plant was sent out some years ago in the form known as *P. alcicornis* major, this being of much stronger growth and more upright than the type. The fronds of this variety are of thick leathery texture, and very dark green in color, giving the plant a very attractive appearance and making it also one of the best exhibition ferns in cultivation.

Probably the most noted species is the one of which an excellent illustration appears in the present issue, *P. grande*, the specimen shown being a well-known example at Horticultural Hall, Fairmount Park, Philadelphia, from a photograph taken some time ago.

The barren fronds of *P. grande* are very large and almost erect, and are deeply cut into spreading divisions, while the fertile ones are thrown out at almost a right angle to the first, being from three to six feet in length in a large plant, and are deeply divided into long pendent segments.

The spores of *P. grande* are produced in a large irregular patch at the base of the segments noted above, and in general appearance bears some resemblance to a patch of brown fungus on the under side of the frond.

I have never seen this species produce any young plants from the roots, but have raised it from spores though experiencing some little difficulty with the young plants when they were first potted off, from their susceptibility to "damping" at that stage.

Another remarkably handsome species is *P. Willinkii*, a warm house plant from Java, introduced some fifteen years ago. This is of smaller growth than the preceding the barren fronds being erect, rounded at the base and cut into lobes.

These fronds are somewhat ephemeral in character, or rather in substance, and

seem soon to have fulfilled their office, as they turn brown and dry in a short time after they are developed, whereas the fertile ones will endure for a year or more. The latter are produced in threes, attaining a length of three feet or more, are drooping in habit and are sometimes forked into perhaps the most perfect representation of a stag's horn that is to be found in the vegetable kingdom, while the color is grayish white, this being caused by the fronds being closely covered with whitish scales.

Other fine species are *P. Hillii* and *P. aethiopicum*, both of which are strong growers and remarkably handsome, but possibly not quite so readily procured as those mentioned above.

In addition to those already alluded to there is one other species that is sometimes catalogued, though probably not in cultivation, and from description is the oddest of this odd genus, as it has in addition to these two forms of fronds common to the family a special fertile segment or frond, the latter being kidney-shaped and six inches or more in breadth and thrown up on a stalk.

W. H. TAPLIN.

New York.

Business is rather quiet for this season of the year. The usual exodus to Europe is going on, but there are very few flowers used. "Steamer work," once the most profitable part of the season, is fast dying out, people nowadays make very little ceremony about going to Europe.

The warm weather of the past week has brought out an abundance of flowers. Some of the trees are bursting into leaf and in Central Park the forsythias and deutzias are in full bloom. Paeonies have made their appearance and sell well. Bulb stuff is very soft and will soon be over leaving a better field for roses. Violets are plentiful and are getting small as their season draws to a close. Jaeps have been poor so far. Hybrids are plentiful. According to present prospects this will be a good season for outdoor flowers. The lilac bushes and other flowering shrubs are showing fine things. It is said that bulb stuff will be scarce next year, as the very severe winter they have had in Holland destroyed the greater part of the bulbs there.

New York has a new plant market. The "Union Square Flower Market" is called. Heretofore it was held at the foot of Spring street round one of the small squares that dot the city. The present project has been met with a somewhat subdued growl from the retailers who promise to compare with a lion's roar should the affair infringe on the retail trade. It is the aim of several "Dailies" here to get up a flower market same as those in the principal cities of Europe. This is all very fine from the public's side, but would it benefit any portion of the trade? The present market is only for plants which have to be cleared away by 7 a. m. Visiting the square on Saturday morning I found a good many wagons there unloading. The plants were poor with very few buyers in attendance; the trade seemed to have boycotted the new market. Union Square is more central and better adapted for a flower market than was the old stand and if the growers have any sense they will not ignore the wishes of their old friends the retailers. It is all very fine for the newspapers to picture the grower selling to the retailer to "sassify" to holes and the public in general, but is doing so they (the growers) injure themselves. The idea of hanging

SPECIMEN PLANT OF PLATYCERIUM GRANDE. (STAG'S HORN FERN)

around all day selling to and arguing with old women is not pleasing to the business man who wants to sell out and return to his greenhouses. Why should the future of New York's plant trade and it is a very important one, be left in the hands of very important and ignorant journalists? Ignorant because they know nothing of plants and the requirements of the trade. Why don't the growers and retailers meet and adopt measures that will benefit both? Will the growers and retailers who do business in this city ever

see the beauty, the necessity, of some organization where the interests of our business could be seen to without interference from outside? It is true we have a Florists' Club here but it is not what it ought to be. We want an institution where the whole trade can be brought in and its interests advanced. We want an organization composed of everybody in the trade.

Flower show gossip is still going round. Philadelphia only echoes the opinion of New York regarding some of the awards.

There can be no excuse only an ignorance of art, a lesson to all future committees in all cities. The only judges of true floral art are the people engaged in the business. The club will meet on the 20th when an investigation will be held. Mr. Lawrence Hafner, for many years connected with W. H. Brower, corner of 23rd street and Broadway, will sever connection with that house on May 1 and open the store at 915 Broadway as a first class cut flower establishment. It is a fine store in a good locality and with the

talented and popular Larry Hlafer in it there will be room for nothing we hope but prosperity.

John Muller, wholesale florist of West 30th, has sold his business to Mike Hart, the famous peddler.

The Klunder Co., with very little Klunder about it, is reported to have transferred its stock to a Mr. Nixon, who has removed from Klunder's old store to one at 41st and Fifth avenue.

Mr. W. S. Allen has made an assignment, but continues in the business as agent. Mr. Allen has always taken a leading part in all matters horticultural and has many friends who sincerely hope his troubles will be light.

The wedding decorations for the marriage of Miss Dillingham were very elaborate, the whole house being very artistically decorated with palms and flowering plants. The bridal bouquet was of lily of the valley, the bridesmaid's of catteleys. A canopy placed in the center of one of the rooms was very prettily draped with lilac and Bride roses.

The nuptials of Applegate and Demorest gave our fat friend, Chas. Doran, a chance to display his skill. The whole of the house was here also handsomely decorated. The bridal canopy was made of *Asparagus plumosa*, which was covered with lily of the valley and edged with American Beauty roses. The curtains, mantels and corners were decorated with asparagus and garlands of roses whilst above the doors were placed such designs as lover's knots, hearts, horse shoes and cupid's little bow and arrow, etc., made of carnations and roses. The bridal bouquet was one of the latest fads, made in seven sections which were afterwards divided among the bridesmaids. Each section contained two dozen valley and half a dozen orchids. JOHN YOUNG.

Boston.

The orchid houses of F. L. Ames, Esq., at North Easton are full of beauty just now.

Both odontoglossum houses are in full bloom. They are a wonderful feast for the eyes of any lover of these chaste and graceful flowers. A pure white *Odontoglossum Pescatorei* is at present one of Mr. Robinson's particular pets.

But the rarest and most surprising plant now in bloom is a piece of *Cypripedium Lawrenceanum* var. *Havatum*. The plant has a constitution like the type, the flower standing out bold, but the most astonishing fact about the bloom is its color, which is a green of rare beauty, and can be compared to nothing nearer than the flower of *Crologyne pandurata*.

Several other remarkable cypripediums are in bloom in the same house. Most noticeable perhaps are very large specimens of *C. caudatum*, *C. Morganae* and *Wallacii*.

There is a grand plant of the beautiful pure white *Cattleya Trianae* bearing several blooms.

Over at Mr. Gilmore's there is a house of *Cattleya citrina* actually bristling with buds and yellow blooms suspended from splendid healthy plants. Mr. Greaves has reason to be proud of his success.

The cut flower market is in its normal condition for April. Most noticeable is the enormous quantity of roses of all kinds which are coming in. All indications point to an early spring.

The 15th of April was a memorable day at Waban Conservatories. On that day the famous new rose "Waban" was given to the world. The plants were in first

class condition, which is not always the case with novelties of this class, and now that the rose has been distributed it seems fitting that a word of commendation should be said for the man who has had so much responsibility on his shoulders in protecting and growing the plants, but for whose keen eye the rose would probably never have been discovered, and who during all the discussion and advertising has kept modestly in the background, Mr. Alexander Montgomery, our foremost rose grower. It is fortunate for a new rose when it gets into such efficient hands and there is no doubt that should Mr. Montgomery be fortunate enough to strike another new one in the future the recollection of the conscientiously grown plants he has now sent out will prove a valuable record for him.

W. J. S.

Chicago.

The liberal list of prizes offered by the Horticultural Society for the fall exhibition is stirring up the growers and preparations are already being made to grow "exhibition plants."

Mr. J. C. Renssion, of Sioux City, Ia., spent a day in the city last week.

A statue of the great naturalist Humboldt is to be erected in Humboldt Park.

Ground has been broken for the new palm house at Lincoln Park. The new range of greenhouses is now in complete working order and the old greenhouses have all been torn down with the exception of the old palm house. The new range of glass is heated by steam and the heat in each house is regulated to a nicety by an electric apparatus which acts upon the valves in the heating pipes. There is a huge cellar under the entire plant which makes a splendid storage place. The greenhouses rest on a deck of 3-inch narrow planks of white pine, walked in the same way as a ship's deck, so as to prevent drip into the cellar.

Superintendent Pettigrew will make an hardy herbaceous border one of the features of the park in the future. He is very enthusiastic over this form of park ornamentation and this will probably be the subject of the paper he will read before the next meeting of the Horticultural Society.

There will be numerous additions to the contents of the ponds of aquatics the coming season. Among the novelties will be a double flowered form of the native *sagittaria*. On the margin of the ponds Mr. Pettigrew has naturalized a colony of *sarracenia* which he gathered while on a botanizing trip in Wisconsin. It is certainly pleasing to see our beautiful natives utilized in this way.

Mr. Frederick Law Olmsted and his assistants are busily engaged perfecting the details of plans for the grounds of the World's Fair. There will be quite a number of streams and lakes introduced and the margins of these will be planted with native aquatics. A range of greenhouses is being built on the exposition grounds for the propagation of plants to be used in decorating the grounds. Among Mr. Olmsted's assistants is Mr. R. Ulrich, formerly in charge of the grounds of the Hotel del Monte, Monterey, Cal.

Trade rather quiet. Never such a glut of roses as last week and so far this week. Plenty of carnations but no overstock, especially of whites. Other flowers in good supply but no surplus except in roses. Violets are of excellent quality, holding up remarkably well for the season. Peter Reinberg is cutting violets with stems averaging six inches in

length. Lilac is in and arbutus is expected daily.

Philadelphia.

Hugh Graham's Son has failed. There were three judgment notes aggregating \$22,277.50 entered up against him on April 18 by his father, Hugh Graham, one for \$12,500 was the note given at the time of the consolidation of the firms of Graham & Grigg. The entire stock of Mr. Hugh Graham was purchased at that time and this note was given to protect other notes taken in payment of stock. Some time after Mr. Wm. Graham bought Mr. Grigg's interest and continued the business under the name of Hugh Graham's Son. The judgment note was still continued, however, and was a danger signal to the trade generally. The liabilities are quite considerable, but we hear of no very large amounts in any one place. Mr. Wm. Graham says he can't tell how he stands as yet, but hopes to come out all right and says that nobody shall lose a cent if he can help it.

A few very nice chrysanthemum flowers have been offered lately, but they don't sell, and we are glad of it. Fall is their season, have them early in the fall and then they wont go begging. Q.

Easter in London.

On account of the very dull cold weather and the fact that Easter was much earlier than usual this year, the Church decorations were not so elaborate as one would expect.

At St. Paul's, Knightsbridge, a large

WEDDING RECEPTION ARRANGEMENT.

clump of growing callas stood in a brass bowl in the center of the altar, surrounded by bouquets of white flowers; the choir screen was covered with dark foliage on which were massed narcissus of all varieties with their own foliage; round the font was a wreath of ornithogalum, spirea and white narcissus, with large bunches of white tulips at the sides. At St. Thomas', Regent street, the old Spanish altar frontal of white satin, old gold and salmon gave the key to the coloring; spirea, genistas and azaleas were massed around the altar, which was decorated with white lilies and small pots of narcissus and azaleas.

At All Saints' all white flowers were used as a memorial offering for a member of the congregation; large altar bouquets of spirea, gardenia and azalea, palms grouped in convenient places, and along the marble choir screen callas, white hyacinths and lilies of the valley set in a bank of small ferns.

At St. Andrew's yellow acacias furnished the background and white lilies, eucharis, daffodils and hyacinths were used in profusion.

Very pretty crosses are made of grey moss such as we find covering fence rails and fallen tree trunks, with a cluster of white flowers, lilies, camellias and lilies of the valley.

The oval wreath is most popular here, the upper half of green and the lower a heavy mass of flowers. F. L. V.

Wedding Reception Arrangement.

This is intended to be at the right of the entrance to the drawing room. There was no floral arrangement here excepting this near the door, which was a group of tall Harrisii lilies on the floor, with another group raised on stands just behind, and a hydrangea at the base. Besides this, on a basket stand partly covered with smilax, were fine American Beauty roses and Arca Intescens. This was done by Mr. Klunder for one of his prettiest Easter weddings. F. A. B.

New York.

When you write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

Long Island Notes.

BY WM. FALCONER.

THE FOLIAGE of the Czar violet is so much larger and stiffer than that of the ordinary violets that in bunching violets we use the Czar leaves only.

MADAME GEO. BRUANT Rose which is a hybrid between Rosa rugosa and the Tea Sombreuil seems to be a very hardy rose. It is an exceedingly vigorous plant, free-blooming all summer long, white-flowered and in large terminal clusters and teascented; and not a tip of it has been injured by the winter.

ROSE MRS. DEGRAU often gets the points of its branches winter-nipped, but this season not a branch off has been hurt. In pruning it, however, we cut it pretty hard back, because we find by doing so we get stronger wood and more and larger flowers than we would did we retain more of the old wood.

IVIES (Hedera).—I have about twenty kinds of ivies, green and variegated, planted in a border; during the winter they were covered over with a few spruce branches laid over them flat, and every ivy has wintered perfectly.

WHITE MOSS PINK (Phlox subulata).—If you know of anything in its way prettier than the white moss pink for an outer band to a shrubbery or herbaceous border, tell us what it is, for I don't.

EARLY VIOLETS.—It is nip and tuck between the little single Viola odorata of Europe and that persistent but beautiful weed, Viola Patrinii from Japan, which shall be first in bloom in spring. Both are now in good flower in warm places.

SEEDING PRIMULA OBCONICA.—Last year our plants seeded very freely. I had them on a bench near an open globe sash, facing east, and where winds and insects had full play upon them, and we picked the heads every now and again as they were full and ripe, and got quite a lot of seed. And these seeds are good and germinate freely, and don't act like some of the imported article some of my friends tell me about. The plants like a little shade at all seasons of the year. Our two-year old plants have given us excellent satisfaction

particularly in quantity of bloom, but for fine large healthy foliage and large blossoms the young, or one-year old plants are best. I have tried them as hardy plants setting them out in a sheltered warm border in front of a south-facing wall, and find that while some of them are alive the great majority of them have perished.

SEEDLINGS of CANNA STAR of 1891.—I managed to save a few seeds of this canna last summer, and now have one seedling plant from it. And I hope more will follow. And strange though it may seem, while this canna was exceedingly slow to bear seed in summer, I have this winter saved a few seeds from the pot plants.

CHRYSANTHEMUM WM. FALCONER.—Some years ago a large single-flowered chrysanthemum was raised and named as above. But as I had seen nothing of it for the past four years till I came across it at a wholesale florist's the other day, I thought it had been dropped. "No," said the florist, "we have lots of calls for it every year." Well, my opinion of it is that it is one of the poorest varieties grown.

Position of Rose House.

Will some florist who has had experience kindly state if there will be any appreciable difference in the number of rose buds produced by a modern three-quarter span greenhouse during the winter months with southeast exposure as compared with a southwest exposure? That is, with the long side toward the points of the compass mentioned. And if there is a difference, about what per cent will it be, and in favor of which house? G. S. B.

News Notes.

SARATOGA SPRINGS, N. Y.—Easter sales here were one-third larger than last year. Excellent demand for blooming plants. There was a big supply and everything was sold.

VICKSBURG, MISS.—The decorations supplied by florist J. H. Billington for a recent ball were very warmly commended by the local press. The increase in the florists' business in this city is remarkable and the future prospects could not be better.

GALT, ONT.—Easter sales were very satisfactory. Roses were in brisk demand and the supply was equal to the requirements. Plant sales were not very large, the weather being very unfavorable for taking plants out. The demand for cut bloom was much greater than for made-up work this year.

DENVER, COLO.—Easter trade was remarkably good considering the disagreeable weather. Church decorations were quite profuse but little of a new or striking character was seen. The calla as usual took a prominent part. A large shipment of them along with a lot of large palm leaves were received from southern California in good order. J. L. Russell was successful in having on hand a large crop of Harrisii which proved preferable to the calla and sold at good figures. The firm of Haycock & Huddard have newly incorporated under the title of The Denver Florist and Fruit Co., with a capital stock of \$30,000, Mr. Louis Beer joining the firm in the capacity of secretary and treasurer, Mr. P. Huddard remaining as manager, and Mr. Haycock president. They are now preparing to add 15,000 feet of glass to their already extensive place, and correspondingly improve their eighty acres of fruit farm.

ORIGINAL AND LARGEST GROWERS OF
LILIUM HARRISII, BETTER KNOWN AS **THE BERMUDA EASTER LILY.**

BULBS NOW READY FOR DELIVERY.

THE BEST IN THE WORLD FOR FORCING FOR WINTER FLOWERS. WE OFFER ONLY STRONG FIELD-GROWN BULBS FROM OUR OWN GROUNDS IN BERMUDA.

COPYRIGHTED, 1900, BY F. R. PIERSON, TARRYTOWN, N. Y.

From a photograph taken the week before Easter, 1899, showing a view in one of our new iron greenhouses, here at Tarrytown, 20 feet in width by 120 in length, of a crop of *Liliium Harrisii* in full bloom. This house produced over 15,000 flowers for Easter.

This is not only the best by far of all lilies for winter blooming, but it is one of the most profitable flowers that can be grown by florists. It is very easily handled, and the flowers being especially effective for decorative purposes, always command large prices. From its name some have thought it was a bulb for florists' use for forcing for the Easter market only. This is not exclusively so; it deserves its name from the fact that, in Bermuda, grown in the open ground, it blooms at Easter time—hence the name "Bermuda Easter Lily"—but by growing it in this country in the greenhouse, with successive lots, it can be had in bloom all the winter from early in December until after Easter; in fact, by special culture, all the year round, or as long as cut flowers are in demand. The fact that it can be forced into bloom by the Christmas holidays adds particularly to its value, as it sells in at a time when flowers are usually scarce and in great demand at high prices, but to accomplish this the bulb must be potted early in August, something depending upon after treatment and the temperature the bulbs are grown in. For this purpose our Bermuda-grown bulbs are indispensable, as in Bermuda the bulb reaches its highest development, and ripens off perfectly, and is ready for shipment usually by the middle of July—before bulbs in our own country have hardly begun to make their growth. Our bulbs being grown in the open ground, in a climate naturally adapted for their perfect growth, are particularly strong and healthy at any time.

The extent to which this Lily is being forced for winter flowers will be shown by a sale made by us to a large New York grower, who purchased 30,000 bulbs for his own use. We hear it said occasionally that *Liliium Harrisii* flowers will not keep—this is owing to improper handling. If cut as soon as open they can be kept for more than two weeks, if in a proper place. It bears shipping splendidly, as the two following letters will show. These were written acknowledging the receipt of flowers shipped last Easter.

J. L. Russell, Denver, Colo., writes: "The Lilies came in excellent shape. I don't think I lost one; it is a pretty good recommendation for your packing."

The Fort Worth Nursery Seed and Canning Co., Dallas, Texas, writes: "The Lilies arrived in perfect condition, and we must compliment you on your packing. We would not have thought they would have carried so far packed dry."

THIS VALUABLE LILY IS OUR SPECIALTY.

We grow the bulbs by the acre on our own grounds in Bermuda. We were the first to grow it in large quantities and to offer it at reasonable prices, and we have always been recognized by the trade as **HEADQUARTERS FOR THE BERMUDA EASTER LILY**: supplying the trade as we do, both in this country and in Europe, and we hold by far the largest and the controlling stock of the genuine variety in the market. The extent of our operations in this bulb alone will be best understood when we state that we expect to sell from OUR CROP of 1899, over

—▶ **HALF A MILLION BULBS.** ◀—

Be sure you get the genuine *Liliium Harrisii*. In order to secure "the true variety," purchase your Bulbs from original stock, which is known to be pure. The "value of this Lily has led unscrupulous or ignorant parties to plant *L. Longiflorum* in Bermuda, planting it with *Harrisii* to increase their stock rapidly when *Harrisii* was very scarce, thus mixing the stock irrevocably, thereby rendering it absolutely valueless for forcing, and we have known instances where these mixed bulbs have been sold to large growers as the genuine variety, where large lots were required, and dealers should look with suspicion on bulbs offered at prices less than market rates, as the supply has never yet met the demand: "Mixed Bulbs" only being offered at reduced rates.

Large growers or dealers in this bulb should write us for special prices, stating quantity of bulbs desired, and we will give lowest estimate on the same by return mail.

F. R. PIERSON & CO., TARRYTOWN, NEW YORK, U. S. A.

OUR FREESIA BULBS ARE NOW READY FOR DELIVERY. They are of unusually fine quality, nearly twice the size of Bulbs usually sent out. Intending purchasers should write us for samples and prices, stating quantity wanted.

ROSES.

To florists desiring large Roses for spring sales in the most popular varieties we can not recommend the following list too highly. Our stock is extra strong from 5-inch pots—field grown and Plants are larger than those usually sold from 6-inch pots. We offer the following from 5-inch pots at \$25 per 100; 25 sold at 100 rates.

ETOILE DE LYON, DUCHESS DE BRABANT, HERMOSA, THE GEM, QUEENS SCARLET, MME. JOS. SCHWARTZ, MME. ETIENNE, LA FRANCE, MME. SCHWALLER, LOUIS PHILIPPE, MALMAISON, COQUETTE DE LYON.

We have a limited number of the following from 6-inch pots at \$35 per 100.

HERMOSA, ETOILE DE LYON, MADAME ETIENNE, THE GEM, QUEENS SCARLET, DUCHESS DE BRABANT.

DUCHESS OF ALBANY, 5-inch at \$25; 4-inch at \$15; 2½-inch at \$5 per 100.

ROSES FOR FORCING.

We have an immense stock of young healthy Roses for forcing made from growing wood.

PERLE DES JARDINS, PAPA GONTIER, LA FRANCE, CATH. MERMET, THE BRIDE, NIPHETOS.

Price from 2½-inch pots \$5.00 per 100, 3-inch pots \$5.00 per 100. All the standard bedding roses \$1 per 100, \$40 per 1000. Send in your order to be priced.

Re Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president. JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

Another Decision.

SEEDS—BALM, BENE, ROSEMARY, THYME, AND ANTHOXANTHUM ODORATA.

Before the U. S. General Appraisers at New York, March 18, 1891.

Opinion by SHARRETS, General Appraiser.

The contention in the present case relates to the classification of certain seeds, viz: Balm, bene, rosemary, thyme, and Anthoxanthum odorata. Duty was assessed upon them at 20 per cent ad valorem, under paragraph 286, act of October 1, 1890.

The appellant, in his notice of dissatisfaction, says the four first-mentioned seeds "should be classed with herbs, as specified in section 699 of the free list. Anthoxanthum odorata is a sweet vernal grass, and grasses are specified in the free list." Reference is also made by the importer to paragraph 661, but this is probably an error, as that paragraph applies exclusively to oils. Paragraph 639 provides for the free admission of "flower and grass seeds," but does not authorize the free entry of herb seeds other than the varieties named. The Treasury Department, in a decision dated March 23, 1887 (Synopsis 8131), classified balm, rosemary, and thyme as garden seeds. There has been no ruling since then to indicate they were improperly classified. The act of October 1, 1890, continued the rate of duty upon garden seeds imposed by the act of 1883.

We therefore find that the balm, rosemary, and thyme seeds were properly returned for duty at 20 per cent ad valorem, under paragraph 286. The claim of the importer is sustained relative to the Anthoxanthum odorata seed and St. John's bread or bene, and rejected as to the balance of the merchandise covered by his protest.

C. L. ALLEN sailed for Europe Wednesday.

MR. WM. HENRY MAULE, accompanied by his wife, visited Chicago early this week.

NEW YORK.—J. A. DeVeer has removed to 154 East 34th street, between Third and Lexington avenues.

JOHN LEWIS CHILDS is seriously ill. Much sickness exists among the employes of the seedsmen and florists at Queens.

W. B. HAYT, of the Cleveland Seed Co., F. D. Hillman, of S. L. Allen & Co., A. Gallup and J. C. Rennison visited Chicago last week.

A BLOOM of Lilium longiflorum with eight stamens and a perianth with eight segments has been sent by Aug. S. Swanson, St. Paul, Minn. It is of interest merely as an abnormal growth and has been noted before.

Violet Crops.

In answer to Mr. John Wiedey, page 672, will say I consider his cut of 22,375 blooms from 1,200 plants from October to April 1, a very poor one.

Twelve months ago, from October to April 1, I cut 44,500 flowers from 490 plants, and this season from 2,000 plants I cut 34,000 flowers in January, and the flowers did not find an equal in the New York market. I will give the number cut during the previous five months if desired.

G. T. SCHUMERMAN.

Blue Point, N. Y.

In response to John Wiedey's request (page 672) I give my experience the past season. I have 2,000 plants of Marie Louise from which I have sold 71,265 blooms. Below is the record from October 17, 1890, to April 1, 1891:

October	5,350	"
November	10,100	"
December	5,250	"
January	7,015	"
February	16,050	"
March	27,500	"

Total 71,265

COGSWELL & R. PLEHANY.

Norwalk, Conn.

Ancient the violet crops we would like to shy our custer in the ring and challenge the chap who has produced more blooms to come forward. We set out 2,100 plants in a bed 150x9 and picked from October 1 to March 1 117,785, as shown by the record in our tally sheet as follows:

October	6,805	blooms.
November	6,760	"
December	20,025	"
January	27,145	"
February	24,750	"
March	32,300	"

Total 117,785 blooms.

Average yield to each plant, 56 blooms.

JOHN BREITMEYER & SONS.

IMPORTANT TO ALL FLORISTS.

Our new trade list of 50 pages and our descriptive catalogue of 100 pages is now being mailed to you. Should you not receive a copy within a few days, notify us and we will send you one.

Without any desire to brag we assure you we have the largest and best collection of Chrysanthemums in the country.

All stock is bloomed before propagated from. Our list contains over 600 varieties. We also publish a list of synonyms in our catalog.

Pamphlet of "Summer Flowering Bulbs" 20 pages mailed on application. Price \$3 per 100. Our name does not appear in the pamphlet, therefore it is highly valuable for those having a counter trade. Our list of dormant bulbs is the largest and finest of any in the country.

We have so much of interest to florists and others in our catalog that we cannot begin to mention any.

Blanche Ferry Sweet Pea, proved of great value last year as a cut flower. We have a large stock of fresh seed at 10 cents per oz.; \$1.00 per lb.

You will bear in mind we told you last year that Chrysanthemum V. H. Hallock was a good one. You will hear from this later on. We also recommended Charity and White Cap on our last years set as being particularly valuable for florists' use. Prices in quantity on application.

AMERICAN FLORIST CO., 54 La Salle St., CHICAGO.

CONCERNING

Propagation of Plants.

A COMPLETE HAND-BOOK OF PROPAGATION AND POLLINATION.

THE NURSERY BOOK has been prepared with the utmost pains. It embodies the experiences of many experts. The author, Prof. L. H. Bailey, editor of *The American Gardener*, has been engaged in its preparation for many months, and has visited many nurseries and specialists, gathering material upon technical points outside of his practice. The whole volume has been read and criticised by Prof. B. M. Watson, of the Bussey Institution, one of the best propagators in this country. All available authorities have been consulted, and particular parts have been submitted to experts. The fruit matter has had the criticism of leading nurserymen, and the head propagator of probably the most important nursery in America has been freely consulted. The Orchid matter has been prepared by W. J. Bean, of the Kew Royal Gardens. The instructions in the nursery list, which gives the definite methods for each plant, have been read by at least four persons. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology; nor with any abuse reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The nearly 100 illustrations are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, forest trees.

CONTENTS.

CHAPTER I—SEEDS. CHAPTER II—LAYERAGE. CHAPTER III—SEPARATION. CHAPTER IV—CUTTINGS. CHAPTER V—GRAFTAGE. Including Grafting, Budding, Inarching, etc.

CHAPTER VI—NURSERY LIST. This is the great feature of the book. It is an alphabetical list of over 2,000 varieties, with a short statement telling which of the operations described in the first five chapters are employed in propagating them. The following entries will give an idea of the method.

ACER (MAPLE). Sapindaceae. Stocks are grown from stratified seeds, which should be sown an inch or two deep; or some species, as *A. dasycarpum*, come readily if seeds are simply watered as they come ripe. Some cultural varieties are layered, but better plants are obtained by grafting. A series of native species are worked upon common or native stocks. The Japanese stocks are winter-worked upon native species. *A. polymorphum* stocks, either by whip or veneer-grafting. Maples can also be budded in summer, and they are raised from cuttings of both ripe and soft wood.

PHYLLACANTHUS, PHYLLAEROS, DISCHIDIA (LILY). Guttiferæ. Fleshy seeds grow readily. Sow in rather sandy soil, which is well drained and apply water as for common seeds. When the seedlings appear, remove to a light position. Cuttings of the mature wood, three to six inches in length, root readily in sharp sand. Give a temperature of about 60 degrees, and supply only sufficient water to keep them from flagging. If the cuttings are very juicy, they may be laid on dry sand for several days before planting.

GOOSEBERRY.—Seeds, for the raising of new varieties, should be sown as soon as well sown in loamy or sandy soil, or they may be stratified and sown together with the sand in the spring. Cuttings six to eight inches long of the mature wood, inserted two-thirds their length, usually grow readily, especially if taken from mature plants and stored during winter. Stronger plants are usually obtained by layers, and the English varieties are nearly always layered in this country. Mound-layering is usually employed, the English varieties being allowed to remain in layerage two years, but the American varieties only one (Fig. 27). Layered plants are usually sown in the spring, but a year after removal from the stools. Green-layering during summer is sometimes resorted to when no rare varieties.

CHAPTER VII—POLLINATION.

Price, library style, cloth, wide margins, \$1; Pocket style, paper, narrow margins, 50 cts.

STANDARD FLOWER POTS

— AND —

JARDINIÈRES IN GREAT VARIETY.

NOTE.—It makes us smile to see how some manufacturers have to advertise cut prices (in the busiest part of the season) to sell a stock of first prize pots. We have been unable to fill orders promptly for three months.

A. H. HEWS & CO., CAMBRIDGE, MASS.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equalled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/4 inch.....	3,000	250 lbs.
2 ".....	2,400	250 "
2 1/4 ".....	1,500	250 "
2 3/4 ".....	1,500	250 "
3 ".....	1,200	250 "
3 1/2 ".....	800	250 "
4 ".....	600	250 "

It will be seen at a glance, that our pots are one-third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **FIG. SEND FOR PRICES.**

Sowing Cobaea Seed.

Cobaea seeds are usually considered difficult to germinate. They are thin and flat and destitute of albumen. The embryo is large, but owing to the thinness of the cotyledons is extremely delicate and susceptible to decay. This explains the ill success which is often experienced in raising cobaea from seed.

In sowing them great care must be used to avoid getting them too moist. Only humus or mould should be used for these seeds. They should be laid flatwise on the surface of the soil and barely covered.

The writer never sprinkles them for three or four days after sowing, and then very lightly. The moisture present in the soil at the time of sowing is sufficient to last them for some time, or even until germination in moist weather. By this treatment the writer never fails to germinate 90 to 100 per cent of the seed sown.

ERNEST WALKER.

New Albany, Ind.

Violets Two Years.

In answer to C's query, page 648, AM. FLORIST for April 2, violets will stand two years and bloom as well as young plants provided they are not too much matted in the frame from the first year's growth.

Being unavoidably set out late, and drought following, several thousand of our clumps did not make their customary growth last summer. Although these plants have averaged 75 flowers per clump this winter we expect to let them stand for next year. Our plants are almost exclusively of the variety Marie Louise.

ERNEST WALKER.

New Albany, Ind.

THE CHEAPEST AND BEST OF ALL.

FIRE-TREE OIL
INSECTICIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes—Half-a-Pint of Fire-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-pint of the Fire-Tree Oil to two or four gallons of water, or two or three table-spoonfuls to the pint.

For Red Spider and Caterpillar—Half-a-pint of the Fire-Tree Oil to two gallons of water, or three table-spoonfuls to the pint.

For Mealy Bug, Brown or White Scale—Half-a-pint of the Fire-Tree Oil to four or six quarts of water, four to eight table-spoonfuls to the pint.

For Mildew and Blight on Fruit or Foliage—Half-a-pint of the Fire-Tree Oil to a gallon of water, or six table-spoonfuls to the pint.

Used with warm water it is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied in Wash, Tin or Pot Vessels. Galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fire-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ring-worm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fire-Tree Oil in one quart of warm water and dip the bird in the water, care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

Sold in Bottles and Tins.

Manufacturer—E. GRIFFITHS HUGHES,
MANCHESTER, ENGLAND.
SOLD BY ALL SEEDSMEN.

PRACTICAL TESTS.

UNIVERSITY OF CALIFORNIA,
AGRICULTURAL EXPERIMENT STATION.

BERKELEY, August 22, 1899.
Messrs. MORRIS, LITTLE & SON, BROOKLYN:
Gentlemen—In regard to the sample of Insecticide submitted by you for trial, I beg leave to state that the preparation has been used on the University grounds with the following results: First, four ounces of the Insecticide were added to one gallon of water and applied to woolly aphis on figs with a spray pump. The insects were killed wherever touched by the insecticide. Second, one-half ounce of the Insecticide was added to one gallon of water and application made by spray to the greeny on rose bushes; the insects were killed on all sprays reached by the spray. The amount of material submitted for experiment was too small to admit of large scale experiments, which would be desirable.

Very respectfully,

E. J. WICKSON,

Assistant Superintendent Agricultural Grounds.

FLUSHING, L. I., June 25, 1899.

Dear Sirs—I have found your Little's "Antipest" very efficacious in destroying the insects injurious to plants, without affecting the plants in any way. I regard it as the best insecticide that I have used, and I would not be without it. It is easily applied, very effective, and can be used with safety.

Yours truly,

JOHN HENDERSON CO.

409 FIFTH AVE., NEW YORK, Jan. 12, 1899.

Dear Sirs—We are most willing to testify to the good quality of "Little's Antipest." It is the best and most effective insecticide we have ever used. You can send us another 10 gallons. Yours truly,

SIEBRECHT & WADLEY.

QUEENS, N. Y., Jan. 8, 1899.

Dear Sirs—I have been using Little's "Antipest" since last September and have no hesitation in recommending it as by far the best insecticide I ever used. While it is sure death to all insects, there is no trace of the compound left on the foliage of plants. Please send us a gallon more at your earliest convenience. Respectfully,

JAMES MACKAY,

Foreman V. H. HALLON & SON,

PHILADELPHIA, Pa., Dec. 3, 1899.

Dear Sirs—I have been using your "Antipest" for several months for washing Palms, to destroy scale, and I find it valuable for that purpose. Respectfully,

JOHN BURTON.

1287 BROADWAY, BROOKLYN, N. Y.

Dear Sirs—I have used Little's Antipest for Mealy Bug and must say that it is the only remedy that I found to do the work effectively, having used various other insecticides before without good results. Respectfully yours,

W. C. KRICK.

It is said that the light grades of the plant bed cloth used for making substitutes for hotbed sash in spring is very useful as a summer shading when it is desired to have a shade that may be removed at will.

SECRETARIES OF Florists' Clubs should keep a scrap book wherein they may paste clippings of mention the club's exhibitions or other movements may have received in the local press. The name and date of the paper from which the clipping is cut should be written in ink over or under each one when pasted in the book. Such a collection makes extremely interesting reading after a few years have elapsed and is of decided historical value.

ALREADY the question is being asked: Are you going to Toronto in August? The majority of the replies are in the affirmative.

QUOTATIONS on cut flowers this week show the market to be thoroughly demoralized.

WHEN WRITING advertisers please say that you saw the adv. in the AMERICAN FLORIST.

The Baltimore Flower Show.

After a pleasant ride of 45 minutes a delegation of over 20 of the Washington florists found themselves in their suburban seaport, enjoying the sight of an excellent exhibition of spring flowers given by the Gardeners' Club at the Academy of Music.

A display of hydrangeas grown by Conrad Hess was the feature of the show, over 200 being on exhibition and making a show in themselves. The collection of orchids from Messrs. Brackenridge & Co. included well flowered specimens of Arthropodium giganteum, Lycaste Skinnerii and Cattleya citrina, and many other good kinds. A few choice rhododendrons in flower grown by Isaac Moss attracted much attention, as did also a collection of palms, crotons and other decorative plants from the same grower. A collection of carnations comprising the following varieties: Lamborn, Buttercup, Pride of Kennett, Chester Pride, Grace Wilder, Silver Spray and Tidal Wave, attracted a great deal of professional notice. They were grown by H. E. Chitty, Paterson, N. J. A fine collection was also shown by Geo. Creighton, of New Hamburg, N. Y., comprising the following kinds: Crimson Coronet, Peachblow Coronet, White Coronet, Mrs. Criswell, The Infant, American Flag, Grace Darling and Fred Creighton, the last by far the finest of the lot, very much after the style of Grace Wilder.

A collection of palms, ferns, etc., from Dreer, Philadelphia, occupied a central position and some of the plants were good specimens especially the Cycas revoluta and Rhapis humilis being very fine. A group of Mannettia bicolor from Hess was a crowd attracter. John Donn was in with a collection of 24 azaleas which were fine.

The cut flower department was well represented. The following are some of the best: A table design by Seidewitz of Annapolis was very good. The Halliday Boys displayed their usual good taste in funeral work, a wreath of roses and valley taking first premium, also first in the corsage bouquet exhibit.

Prizes were awarded as follows: Collection of palms, 1st I. H. Moss; 12 ornamental plants, 1st I. H. Moss; 6 stove and greenhouse plants, 1st E. Kress; 12 azaleas, 1st John Donn; one specimen azalea, 1st John Donn; 12 cinerarias, 1st John Donn; 12 pansies, in pots, 1st E. Herrmann, 2nd John Donn; 12 double geraniums, 1st William Fraser; 12 single geraniums, 1st E. Herrmann; 12 ornamental geraniums, 1st Henry Bauer; 12 heliotropes, 1st Wm. Fraser; 12 double petunias, 1st Henry Bauer; 12 hyacinths, 1st Edward Hess; 6 hydrangeas, 1st Conrad Hess; 12 Lilium Harrisii, 1st James Simpson; 25 roses, in pots, 1st James Simpson, 2nd John Donn; 12 hybrid roses, 1st Henry Bauer; 25 orchids, 1st Brackenridge & Co.; 10 orchids, 1st Brackenridge & Co.

Collection of crotons, 1st I. H. Moss; collection of cacti, 1st E. Herrmann, 2nd Henry Bauer; collection of begonias, 1st John Berl, 2nd Henry Bauer; 6 rhododendrons, 1st I. H. Moss; collection of bedding plants, 1st Henry Bauer; vase of growing plants, C. M. Wagner.

Cut flowers—12 hybrid perpetual roses, 1st William J. Halliday; 50 pansies, 1st D. Zingibiel, of Needham, Mass., 2nd E. Herrmann; 100 violets, 1st C. M. Wagner; table decoration, 1st E. A. Seidewitz, 2nd Halliday Bros.; funeral design, 1st Halliday Bros., 2nd E. Herrmann; table design, 1st T. H. Patterson, 2nd Halliday Bros.; new design, 1st E. A. Seidewitz, 2nd T. H. Patterson.

Bride's bouquet, 1st E. A. Seidewitz, 2nd W. J. Halliday; corsage bouquet, 1st Halliday Bros., 2nd E. A. Seidewitz; basket of flowers, 1st Halliday Bros., 2nd W. J. Halliday.

The special premiums of \$25 for the best collection of roses in pots was taken by E. Kress; of \$15 for best single specimen by Henry Bauer, and of \$10 for next best single specimen by I. H. Moss. Messrs. Clarke, Lee and Gages, of Washington, were the judges.

After the judges finished their work there was a dinner tendered to the Washington Club by their Baltimore brothers at which the usual toasts went off with great applause and laughter and the company broke up after singing Auld Lang Syne in a manner seldom heard in the Eutaw House, Baltimore. C.

New York.

Business very quiet for the marriage season. There have been several weddings during the week, at which were carried some very handsome bouquets made by the different florists. Bridal bouquets of trailing arbutus are fashionable just now.

Horace Greeley's daughter carried a bouquet of white violets at her wedding on Thursday. The interior of the carriage that conveyed the happy pair from the station was elaborately decorated with Bride roses and trailing arbutus.

Wild violets have made their appearance and sell well for their novelty. The warm weather continues making flowers very plentiful. Out doors the tulips are glowing in all their glory and the beautiful Forsythia and Pyrus Japonica and many flowering shrubs are in full bloom.

The New York Florists' Club met at their rooms on Monday night. There was a large attendance. Whatever failure was attached to the recent fair was considered very light, the members being justly proud of the show from its artistic side.

A proposition made by the management of the Madison Square Garden to the club to give an exhibition in their large hall in the fall was favorably con-

sidered and if the Madison Square Co. meets the requirements of the club they will give an exhibition this fall that will eclipse all past efforts.

Mr. Joseph Fleischman will on or about May 1 open a floral establishment adjoining the "White Elephant," 31st and Broadway.

Exception being taken by the parties interested to some of my criticisms in last week's letter I can only repeat: The retail trade was poorly represented in some of the exhibits. Of course all agree that it was held too soon after Easter to give competitors a chance of formulating their ideas; finer work could be seen daily in the stores of those who did compete.

In an exhibition nothing but the best, the finest should be shown. With the exception perhaps of a few no one will say that they did their best.

It is to be hoped that at the fall exhibition the retail trade of this city will have a chance of showing their best.

In answer to Mr. Gerard allow me to say that no one can blame Mr. Parsons for lack of flowers in our parks, but when we see the beautiful floral designs in the parks of less important cities we can only offer as an excuse that our officials are too miserly or too much engrossed with other matters to study the entertaining of New York's public with floral treats. We are assured by a knowledge of Mr. Parson's ability that everything is done that can be done with the facilities at hand in the adornment of our parks.

There was a mistake made in the notice referring to Mr. Hart in last week's issue; it should have read "hustler." Mr. Hart is a hustler, as everyone knows, and if flowers can be sold Mr. Hart can sell them. He has had a long experience in the business and was always considered one of the best businessmen in New York. We congratulate Mr. Hart on his success and hope his business will be prosperous.

JOHN YONGE.

The New York Show.

Mr. John Thorpe sends us the following regarding the illustration which appeared on page 698 of last week's issue:

"General view from boxes above entrance to Lenox Lyceum.

"The plant immediately in the foreground is *Ceroxylon niveum*, a lovely palm. The circular group to the left is Mr. Bennett's first prize group of ornamental foliage plants 20 feet in diameter. The center plant is *Astrocaryum Mexicanum*, fully 12 feet high. Other fine specimens were kentias, latanias, phoenix, arecas, dieffenbachias, dracaenas, ferns, marantas, crotons and many other plants. It was handsomely put up and called forth a great deal of praise. The next group to the right is Mr. Brett's second premium, a handsome and effective setting. Massive specimens of *Cycas revoluta*, latanias and phoenix towered above smaller plants of marantas, crotons and specimen *Adiantum Farleyense*, many nearly three feet across. This was greatly admired and ran a close second. Other groups seen in the picture were from Messrs. Siebrecht & Walley, F. R. Pierson and David Rose. At the back of the fountain can be discerned the magnificent collection of orchids from Messrs. Pitcher & Manda. The fountain was most beautiful. Under the water and up the column were electric lights of fiery orange, luminous purple and translucent yellow. In the fountain were nymphs, pontederia and lymnocharis. The boxes and the front of the proscenium were draped with southern smilax."

FIRST PRIZE ARRANGEMENT—BY STUMPP

SECOND PRIZE ARRANGEMENT—BY LE MOULT

TABLE DECORATIONS AT THE NEW YORK EXHIBITION.

[For Descriptions see page 698 last issue.]

Referring to the original funeral design exhibited by J. T. Foley and shown in the illustration on page 698 of our last issue Mr. Thorpe writes: "The Heavenly Lamp. This was a very unique and expressive piece of work. The base was composed of small ferns and lily of the valley, the stem and brackets of white camellias with here and there a few sprigs of hoteia. The lamps and shades to same were of deep purple pansies margined with golden yellow pansies. Wax tapers were in each lamp. The lamps were perhaps a little heavy in appearance and the column below the base a trifle short. It was universally admired and well deserved it."

Chicago.

At the last meeting of the Florist Club there was a very interesting discussion upon the advisability of selecting ladies who are large buyers of flowers for judges of floral arrangement at exhibitions. Early in the discussion Mr. Bentley introduced the question propounded by Mr. Young in his report of the New York show, viz: "Who are the best judges of floral art? The woman who once in a while buys a cheap basket or the man who has made it a life study?" And the debate afterward was upon this question except that the lady judges considered were those who buy flowers largely and continuously. Nearly every member present had a word to say on the question, but the main debate was between Messrs. Reynolds and Bentley.

Mr. Reynolds held that the florists were in the business to get the dollars and that the verdict of a dozen or more of the leading flower buyers of a city, even if it was quite at variance with the views of the florists themselves, showed the direction in which they should work to increase the crop of dollars. That the large buyers of flowers and floral arrangements were the best judges of what they wanted,

and that it was to the best interest of the florists to supply what their customers most desired regardless of their own ideas of what the customer ought to want.

Mr. Bentley took the position that the exhibitions were to educate flower buyers as well as stimulate the interest of those who had not yet reached that stage. That at exhibitions it was the duty of the florists to present to the public the highest type of artistic arrangement of which the exhibitor was capable and that the awards should be made by judges who were competent to pass upon such arrangements and thus place the stamp of approval upon those which the public should learn to appreciate. Mr. Bentley laid considerable stress upon the fact that many of the ladies who ordered floral arrangements computed their worth by the number of flowers used, utterly ignoring the value of the skill displayed in the arrangement. He hoped for the day when the artistic ability of the florist would receive fuller recognition, and believed that exhibitions could be made an important factor in bringing about this desirable change, if the arrangements were passed upon by thoroughly competent judges. He said: "Paintings are judged by the effect produced and not by the amount of paint on the canvass, and arrangements of flowers should be judged by the same standard. The appreciation of fine art is a matter of education and we must be the educators."

Mr. Reynolds made some humorous comments on the high stand taken by Mr. Bentley asking him if he was really willing to forego a share of the annual returns from his business in order to educate the public and there followed a good natured debate that furnished considerable amusement to the others present.

Mr. Smyth raised a laugh by declaring that judging was only a lottery any way, as it was doubtful whether any two judges would agree as to what con-

FIRST PRIZE BASKET AT THE NEW YORK SHOW—ARRANGED

BY MCCONNELL

FIRST PRIZE VASE OF 100 HYBRID ROSES AT THE NEW YORK SHOW.—

ARRANGED BY STUMPP

stituted a really artistic arrangement.

The subject seemed so promising a one that further debate was made the order for next meeting, and to place the matter clearly before the meeting Mr. Smyth in response to an invitation agreed to read a paper on the artistic arrangement of flowers. Mr. Reynolds also agreed to read before the next meeting an article on the arrangement of flowers in vases by the Japanese, written by Edwin Arnold, and that expressed Mr. Reynolds' views. From the interest already awakened it is probable that the discussion at next meeting will be vigorous.

Some of the finest hybrid roses ever seen here were shown at the last meeting of the club by Mr. Buettner, of E. Weinhoefer & Co. They included Ulrich Brunner, Anna de Diesbach, Magna Charta and Jacqueminot. All were of immense size, splendid color and with beautiful foliage. The blooms of Brunner were cut from plants bedded last June from 3-inch pots. Mr. Buettner believes in replanting hybrid houses with young stock every four years. Thinks he gets better blooms from the young stock. Brunners take well in the market here, but Magnas go rather slow. Mr. Buettner also showed a bunch of mignonette of the variety Machet. The spikes were of good size and perfect in form.

Trade is still quiet. The glut of roses continues, though if present signs do not fail the over supply will not last long, even if business should continue quiet. Jacqs and other hybrids already show up in diminishing quantity and a stiffening in prices is following. Violets are rapidly growing poorer and will soon disappear from the market. Carnations still hold their own and continue very popular, especially the fancy sorts which seem to

suffer less than anything else in the general slump.

Trailing arbutus is in and for a day or two reigns supreme. Enormous quantities of this flower are sold this season. Lilacs are plentiful, but the sale of this flower is almost entirely restricted to the street-fakir. Daffodils, Dutch hyacinths and some of the earlier varieties of tulips from the open ground are making their appearance. The street-fakir is out in full blast and is adorning every available place on the down town thoroughfares. Every nationality under the sun is represented, an irrepressible lot of merchants that are either for good or for evil, who can tell? It is certain that they sell enormous quantities of stuff that would otherwise go to waste.

Several changes will soon take place in the down town district. Mr. George Klehm will give up his State street store and reopen in his temporarily abandoned place at 36 Washington street. Mr. Klehm is very popular among the trade and the good wishes of the fraternity will follow him to his new place.

M. Malsh, who has for several years past catered to the floral tastes of the west siders in the vicinity of South Halsted street, has rented the basement at 113 and 115 State street to the tune of \$5000 a year and has announced his intention to revolutionize the down town trade and to more or less gradually absorb what trade still lingers there. He will first turn his attention to his neighbors on State street and after they have been absorbed will reach over to Wabash avenue after those who may still remain in

that section. Strange as it may seem the hardened old timers simply smile and up to date so far as can be learned no one has offered to sell out his business at a sacrifice.

A. A. Hinz, formerly gardener for Uri Balcom, is now at Tacoma, Wash.

Paul Cadris, for some time past with J. D. Reynolds at Riverside, is now with J. G. Heint, Terre Haute, Ind.

The Horticultural Society of Chicago is possessed of considerable vigor for so young an organization. Last Monday afternoon a called meeting of the executive committee was held in the director's room of the Illinois National Bank, and the business in hand proved to be the consideration of a proposition by Mr. F. C. Vierling, second vice-president of the society and an influential member of the city council, to present to the council an ordinance granting its permission for the erection of a horticultural hall upon the Lake Front Park. Mr. Vierling had already seen Mr. Warren Leland, the principal adjacent property owner, and that gentleman made no objection. It is needless to say that full authority was given Mr. Vierling to make the request in the name of the society. He feels confident that the ordinance will pass without objection. Just before the meeting adjourned Mr. Vierling and President Schneider agreed to each take \$5,000 worth of stock in the company which will be organized to erect the building, thus assuring \$10,000 for a starter.

Boston.

Roses are still very plentiful with no regular selling price on any variety. Carnations are also badly overstocked, although till within a few days they have been scarce. *Smilax* continues scarce and violets are out of the market. Outdoor grown bulbous flowers such as daffodils and tulips are coming in in great profusion. Lilacs, etc. from the south are also being received in quantity. Lilies of all kinds are quite abundant and bring very low prices. In fact the great problem just at present for growers and dealers alike is not how to get big prices but how to get rid of the stuff. Prices is a secondary consideration.

The plant auctions have commenced and will be continued throughout the spring every Wednesday and Saturday. Some of our largest growers of bedding plants dispose of the bulk of their stock in this manner every season now and grow their plants with this object in view.

Forsythias, magnolias, pyracas and other early blooming shrubbery are now in full flower and the nurserymen and dealers in outdoor stock are suddenly confronted with the unpleasant fact that the season is going to be a very short one for them. If the spring advances at its present rate Decoration Day supplies may prove to be an interesting subject.

A new form of *Astilbe Japonica*, known as *grandiflorum*, was recently shown at Horticultural Hall by Mr. Cameron, gardener at Harvard Botanic Garden. It was awarded a certificate of merit. The flowers are very profuse and much prettier than the old variety, and it is said to force more readily. W. J. S.

Syracuse, N. Y.

The spring exhibition of the Central New York Horticultural Society was a decidedly successful one. The display was unusually large and the plants and flowers of excellent quality and well arranged for effect. P. R. Quinlan had the largest exhibit of plants and his azaleas and hydrangeas were especially fine.

The display of cut flowers was admirable. The exhibit of L. E. Marquisee, which took the first prize, consisted of six vases of roses, carnations, violets, etc., and the flowers were as fine as any ever shown in this city. His six azaleas which also took first prize were a fine lot of plants and attracted much attention.

The judges were Wm. Mathews, of Utica, and James Morgan, of Auburn. They made awards as follows:

CLASS 1—FLORISTS.

P. R. Quinlan & Co., first for foliage and flowering plants, first for collection of flowering bulbs, first for best azalea, first, best fern; first, best hydrangea; second, six azaleas; second, six ferns; second, six hydrangeas.

L. E. Marquisee, first for cut flowers; first, best six azaleas.

Mrs. Hayden, second, collection of foliage and flowering plants.

W. Clark Geddes, first, cinerarias; first, six varieties roses.

CLASS 2—GARDENERS.

Peter Kay, gardener to Hon. J. J. Belden, first, best collection of foliage and flowering plants; first for cut roses; first, 6 best ferns.

G. Ham, gardener State Idiot Asylum, first, 6 best hydrangeas; first, 6 geraniums; second for foliage and flowering plants; second, bulbs in flower; second, cut flowers; second, 6 cinerarias; 23 geraniums.

W. Menclley, gardener to H. S. White, first for collection of cut flowers; first for seedling carnation.

J. Hullar, first for collection of bulbs in flower; first, 25 pansies; second for 6 geraniums.

P. R. Quinlan exhibited a fine collection of roses not for competition.

Philadelphia.

William Graham, trading as Hugh Graham's Son, was sold out by the sheriff on Friday, April 24, to satisfy the judgments of over \$22,000 held by his father. The sale netted less than \$10,000, the stock being all bought in by his father. It is presumed that he will carry on the business at the same place.

There was no meeting of the creditors called by him, nor any statement as to the amount of liabilities. An informal meeting of such creditors as could be hurriedly called together was held at the Florists' Club room; some five thousand dollars was represented. A committee was appointed to wait on Mr. Graham and learn his ultimatum; they have not reported.

Mr. Edwin Lonsdale has found among his lot of *Cypripedium Lawrenceanum* a "sport" or new variety. The flower is a beautiful green, without any marking whatever. He says there are only two or three plants of it known to the trade.

Business is not quite up to the mark for this season of the year. Flowers are plenty and are sold at the following prices: *Mermets*, Brides, La France, \$6; *Perles*, *Gontiers*, *Niphotos*, \$3; *Jaques*, \$10; *Hybrids* and *Beauties*, \$15 to \$50.

Mr. David Bairn has sold his establishment and will build at Bala, near Dennison Brothers. It is rumored that when the new establishment is opened there will be a partner who will relieve David of certain duties and permit him to give his undivided attention to the business.

K.

Carnation Culture.

[Read before the Florists' Club of Philadelphia by A. M. Hogg.]

As a prelude I will state that the methods described in this paper are those that I have found best adapted to my soil which is a sandy loam that does not readily become water clogged or heavy.

I never had the advantage of an apprenticeship in the florist's business, my teacher being experience and sometimes the lessons have cost me a neat sum. On this account my culture may differ from many growers and will be more open to criticism and discussion, which I hope you will deal out liberally after I have had my say.

Starting with the cutting it should be taken from a good healthy plant, placed in any good propagating sand and kept in a temperature as nearly as possible to that in which the stock plant has been growing for about ten days. The temperature can then be raised a few degrees and bottom heat applied; good medium at this time is 55° to 60° for both the sand and the atmosphere. Treated in this manner they should be well rooted at the end of four to five weeks.

They are then ready for potting up or planting into trays. I pot all mine as they keep their roots more compact if a trifle pot-bound when set out and take up in the fall with fewer broken fibers. In a very sandy soil this may not be so much of an object. The best pots are rose pots, as they give an abundance of root room and do not occupy so much bench space which is quite an object in potting up large quantities. After the plants are potted the temperature should be dropped gradually until you get to 40° to 45°. This may sound like treating them very delicately, but we are after success and a careful attention to details is the main highway to it. Care should be taken that the greenfly, red spider or weeds do not make an appearance. Give plenty of ventilation and if growing in a house leave it on all night except in severe weather. As soon as danger from heavy frosts is over plant out.

In the field the plants should not be closer than 12 by 15 inches and as much farther as you like. I make it a rule to allow no weeds to grow in the patch, this gives the soil a stirring pretty often, which is an important feature to get good plants. For manure use stable manure and no commercial fertilizer, as these are a positive injury to carnations; they are all right for a crop that is harvested in the field, but a carnation produces its crop under entirely different conditions and should not be stimulated by concentrated manures in the field, as is the case in a wet season with this class of fertilizer. Manure should be applied light or heavy judging from the growth the different varieties made the season before and a late cutting taking more than one well established.

In the fall the best time to plant in is during a cool spell of weather, such as we often have, no matter whether it is the latter part of August or early in October. The object is to get them started with as little check to their growth as possible. I like to give them full sun light as soon as they are able to bear it without wilting, this must be guarded against by keeping the house damp and cool as possible.

The soil in the house should be a trifle richer than what they had been growing in during the summer. I use well rooted stable manure, putting it on the beds early in August and mix with the soil and water well several times so that by the time we are ready to plant in the soil is well mellowed and the manure well mixed. I plant nearly all my carnations on solid beds; this not only saves the expense of benches but I find I can get much better results. The plants keep healthier and the flowers are finer and such a thing as cropping is almost impossible excepting with a few sorts. In regard to getting them in earlier the bench has a few weeks the advantage, but that is rather a doubtful blessing thanks to chrysanthemums.

There are some varieties that will not do well on a solid bed. First among these is L. L. Lamborn; this one wants a house all to itself and a temperature about ten degrees higher than most others to give the best results. I mention this merely to show that what may be meat for one is poison for another. There is a point that every grower would do well to watch carefully as different soils will give different results, and it is only by experience that we can find out what treatment to give them. Fred Creighton is another that wants a bench. I propose to plant my Creightons in the bench on which they are to bloom about the first

AZALEA VERVÆNEANA.

of May and grow them all summer under glass. In this way I hope to get well hardened wood that will come into bloom for the holidays. I did not get my crop this season until February. This may be one of my costly experiences, if so much will be the word, if not I will give results in the *FLORIST* next winter. J. J. Harrison, Mrs. Fisher and Chester Pride also do best on benches and perhaps some of the newer sorts yet untried.

Winter culture is a simple affair if the house is kept clean and the soil occasionally given a loosening up. The most important feature to watch is that they are kept neither too wet nor too dry, but be careful to err on the dry side. The best temperature is 50° to 60° with plenty of air on bright days. Some growers do not stake their carnations. I saw several such houses the past season and can say emphatically no such houses for me. I place a stake between the plants in the row and tie the string around the stakes, this supports the stems and at the same time allows plenty of air and light to the foliage, which is the only objection that can be made to staking for the cost is more than offset by the gain in good blooms.

You may be interested to know what I consider the best varieties. It would be

impossible to give a list that would be satisfactory in all soils. I shall grow for next winter's cut for white: Lizzie McGowan, Mrs. Fisher, L. L. Lamborn and Silver Spray; pink, Grace Wilder, Christmas, Fred Creighton and Day Break; for scarlet I shall grow Hector only, and for crimson, Anna Webb; for carmine there is nothing to compare with Tidal Wave; Buttercup is the best of its color but I can not grow it successfully and will use Golden Gate instead; for fancy, J. J. Harrison, Nellie Lewis and Chester Pride are the best with me. I will also try nearly all the new ones, many of which I have no doubt will not be found on the place the season following.

Selling blooms may not belong to carnation culture but the profits in the business will be governed by the law of supply and demand and it is to our interest to make that demand as large as possible. Outside of what few are wanted for designs they should all be pulled with a good long stem which will generally have a few unopened buds on it and in addition there should be a few sprays of foliage as long as the stems put with every bunch; all of this the retailer would have to pay well for and I know from experience that his customers will give him a good dividend on the investment.

Mr. W. L. Edwards followed the essayist and gave some valuable pointers in regard to varieties. Like Mr. Herr he was opposed to the use of artificial fertilizers, using stable manure only and plenty of it.

Mr. Dillon made a few remarks in regard to watering, ventilating, etc., deprecating strongly the syringing of carnation plants.

Mr. Edwards senior created some amusement by his emphatic rejoinder to the latter statement, claiming that in his experience extending over some 30 years copious syringing was beneficial, in fact absolutely necessary. Mr. Edwards also differed from his son in regard to fertilizers. He had grown successfully with artificial as well as natural manure. But his great ally among fertilizers was chicken dung. That he preferred to anything else.

The Carnation Contest at New York.

I had hoped and expected to see a full and exhaustive report of the spring exhibition held recently in New York.

The cup valued at \$60 was awarded to Sea Gull, a white variety, large flower, on stout erect stems. E. G. Hill & Co., Richmond, Ind., were the exhibitors, though Mr. Fred Dörner, Lafayette, Ind., is the raiser.

Certificates of merit were awarded to the following: Lizzie McGowan, E. V. Low, Iago (exhibited by John McGowan), Puritan (exhibited by Wood & Bro.), Mrs. Robert Hitt, Mme. Albertine and Salmon Queen (E. G. Hill & Co.), Fred Creighton (George Creighton), J. B. Jaquier (Dailledouze Bros.), Grace Darling and Mammoth Pearl (J. C. Chambers), Caesar (W. R. Shelmire), Wm. F. Dreer (C. T. Starr), American Flag (G. Bergmann).

I would very much like to say something more about this exhibit. It certainly deserves it, but for want of time I cannot do so now. EDWIN LONSDALE.

Azalea Vervæneana.

We present herewith an illustration from a photograph of Mr. James Dean's new hydrangea which has received such favorable comment from those who have seen it. The plant shown was in a 5-inch pot. The flower is double and very large, measuring six inches over. In color it is variegated, delicate and bright pink with a crimson blotch in the center. This is expected to be a most valuable sort for Easter plants.

The Multiplication of Araucarias.

(Translated by F. L. V. for the *Am. Florist*.)

Araucarias are multiplied in three ways: By seed, by budding and by grafting. Seed.—The seeds should be sown almost immediately after gathering; they are large and the oil which they contain soon becomes rancid, destroying their germinating power. They are generally shipped in layers in earth and usually germinate during the long journey from Australasia to Europe; there is then nothing to do but to replant them carefully in small pots in the cold frame, where the young plants continue to develop.

One may well imagine that the seeds of this tree received by the seedsmen and kept in sacks will often have lost their vitality, and indeed belong to a class the germination of which seedsmen will not guarantee.

The slowness with which these seeds germinate must also be taken into account, and the seeds which remain fresh

should not be thrown out but patiently waited for until they start or begin to decay.

It will be found best to plant in small boxes 12 inches long by 8 inches wide, assuring good drainage by a layer of sandy gravel or broken pots, and filling with fresh peaty loam, covering the seeds half or three-quarters of an inch, and place in a moderately warm frame, even cold in preference to much heat. The heat should not be increased until the plants are reported and are to be urged into rapid growth. This mode of multiplication by seeds would be the simplest if these always arrived in good condition. It would also have the advantage of producing the most vigorous plants, if this were an end generally desired. But the case is just the contrary. The *Araucaria excelsa* from seed grow too rapidly on the Mediterranean coast. From Toulon to Nice and at Genoa, where they are largely planted in gardens, they form too tall trees, not compact enough and with branches too far apart. This defect is still more important when the plant is grown for interior decoration, as is usually the case, it being a great favorite as a parlor plant. For this end is employed one of the two processes which we will describe, budding and grafting.

Budding.—For budding *Araucaria excelsa* we must first have the mother plants. For this purpose we take plants already strong and cut off the heads; it is best to keep the plants in the greenhouse so that the new shoots will expand in about the same temperature in which they will be budded. Around the section made in the stem a crown of young sprouts appears; these should be carefully removed, keeping a little base with each, and planted in small pots filled with fine, fibrous, sandy or peaty soil. Then bury the pots in a temperate frame, covering closely at first, afterward ventilating gradually. When one can avoid sudden changes in the state of the soil and of the atmosphere, very good results are obtained. When the roots touch the sides of the pot the young plants should be repotted, giving always a good compost of substantial fibrous soil. In the winter place them in a temperate house, near the glass. In May they may be placed outside after repotting, sunk in the ground, shaded and protected. In this way are obtained those pretty, regular plants, with branches in close succession from the base, which are so much sought for parlor ornament.

Grafting.—This last means is also used to obtain handsome compact plants. If it is wished to graft quite young plants, we lower the seedling plants from the size of a pen to that of a finger, and cultivate in pots; it is enough to leave an inch or two of stem above the soil, just for the graft. Then graft (fourwise graft or half split) using a young graft, but firm and somewhat ripened. Bind with raffia and cover closely in the frame, as with camelias. After uniting the plants are treated in the usual way, without other care than to watch the shape of the plants, water and keep near the light.

The *Eutaeta* section of *araucarias* may be treated in the same manner: A Rulei, Muelleri, Cunninghami, Cooki and their varieties.—*Ed. Andre in the Revue Horticole.*

Giant Mignonette.

The accompanying illustration is from a photograph sent by C. E. Baumann, Rahway, N. J. Mr. Baumann writes:

"You will please observe that there is a two-foot carpenter's square photo-

A GIANT MIGNONETTE

graphed with the plant, enabling any one to gain a correct idea of its proportions. The main point about the plant is that the trusses are phenomenal in spite of the fact that it has never been disbudded. Some of the florets are one-half inch across. The plants surrounding the large one have borne spikes that have brought \$2 a 100 right along. They are strong and vigorous, but not compare with the other."

Leaves of Advice From a Limb of the Law.

(For Young Florists.)
XXVI.

RESPONSE TO QUERY BY H. B.

You ask me to give a little advice to a friend of yours who does business as a florist in a small way, say 5,000 or 6,000 square feet of glass, under which he grows callas, roses, carnations, etc., besides all sorts of bedding plants. His establishment is in the center of a small city, but up to very lately no nearer neighbor than one hundred yards has come to disturb him and his flowers.

Now at last, a large electrical plant—quite a different one from his by the way—has set itself down next door to him, with very disastrous results to his business. Oil and dirt cover his glass, and water will not cleanse it. The steam from the vast engines reduces this oil and dirt to such impalpable fineness that it enters the laps of the glass and injures his flowers. The sun is shut out by the deposit on the glass and his plants are sickly. Plants too which need the open air are all but ruined, in a word he thinks—and other florists agree with him—that his business is ruined.

Now you ask indignantly: Can it be possible that he has no redress against this electrical company?

I must begin by saying that in order to give advice on such a subject I should

know all the different sides of the question. For instance, if his florist business is located in the center of the town and the town has been gradually growing up closer and closer to him, he would have no redress against any manufacturer whose engine filled the air with dust, steam, etc., which so readily tarnish glass. There is nothing in such a business to make it a nuisance. It is not detrimental to health. It is part of the necessary life connected with the growth of a town, and the law could not be expected to stay the manufacturing interests solely to protect the glass roof of a florist's establishment.

All cities are more or less smoky and dusty and their atmosphere is necessarily filled with particles of oil, acid, etc., which quickly tarnish glass. The law requires that the chimneys of such a factory, as in fact all manufacturing establishments using large engines, shall be high enough to carry off the smoke and gases so as not to injure health; but the law cannot be expected to require such a factory to keep its dust and dirt from flying out of the windows and as many perfectly lawful businesses throw off dust both organic and metallic, even the residences near them have no redress, for the owners can't prove that they are hurtful to health.

A nuisance in the eye of the law is anything which injures a person's health or prevents him enjoying his own property, or the property set aside for public use, such as highways, sidewalks, etc. As you will readily understand, a nuisance may be public or private.

Now the law must not be too severe either way. True, my business may annoy you, yes, even interfere with yours but if mine be as lawful as yours, how can a court be justified in closing mine up?

In this day and generation the law guards the public health very jealously, and will permit no one to set up a nu-

PARTERRE AT FAIRMOUNT PARK, PHILADELPHIA.

sance in a village, town or city, which is detrimental to the public health, that is which poisons the atmosphere or the water, but it will not stop a man's engine merely because it sends out an unpleasant odor or is noisy.

The introduction of large engines for purposes of cable roads, electrical plants, etc., are called for by the growth of cities and towns, and the law will lay down regulations as to the height of the chimney and the necessary strength of the walls to prevent any lateral vibration, but it will not say: "Send out no dust, no unpleasant odor and be perfectly noiseless."

It often happens that such plants are located next dwellings and render them unfit for residences, but yet no action will lie for nuisance.

To be a little more specific: If your florist's greenhouses are located in the business part of a city you have no right in law to object to any particular business which that city permits to be carried on within its limits. The mere fact of the factory coming next to you proves that your land has become too much shut in by the growth of the town to be any longer fit for the cultivation of delicate flowers which call for sunlight and pure air. You must yield to the inevitable—go where you may find sunlight and pure air.

The electrical plant is just as lawful a business as growing flowers, but they don't chime any better than the callings of cloth fuller and charcoal burner.

Yet understand me. I don't say in so

many words that you have no redress. It may be that the company in question has neglected some of the precautions which the law requires it to take. In that case you could interfere. I can see how in certain cases there would be an action for nuisance, but not in this.

Sometimes big corporations have soul enough to do a man justice in such a case without recourse to law. This may be one. Anyway, no doubt the lots would lease for a sufficient sum to hire land elsewhere, in a suburb. A city is a poor place to grow flowers, electric plants or no electric plants.

My advice to your friend is to look upon the building of this vast concern next door to him as part and parcel of the necessary growth of the city. It can't be helped. It can't be stayed. It may be a hardship, so is a street railway before your door, or a fire engine house in your block.

I doubt that a court of equity would grant your friend an injunction, and I don't advise him to ask for it. If he can't change his business so as to make use of his land, others will be willing to lease it for theirs, which may stand in need of motive power from the electrical plant. No doubt he is attached to his old stand after twenty years, but there is little or no sentiment in business matters.

However, although corporations as a rule have no souls, this one certainly has a spark and it may do your friend justice. If not, I'm afraid he must carry his roses to a sweeter atmosphere.

UNCLE BLACKSTONE.

Cleanliness in the Greenhouse.

I do not mean to touch upon the subject of personal cleanliness; that is something we naturally expect from everyone, but of cleanliness of the house, which we do not find as often, but expect nevertheless.

In the average run of greenhouses you will find more or less rubbish in the walks, under the benches and in out of the way corners; leaves, weeds, pieces of pots, hay, straw, broken glass and many other articles which are not only a nuisance in themselves and detrimental to the health of plants and man by their decay but give the place a slipshod appearance to the visitor, whether customer or not, especially to ladies.

Why not have a basket or box to put this litter in as it is made and at once remove it to a place especially provided for it. In other words have a place for everything and keep it in its place, whether tools, empty pots, rubbish or what not. It certainly will make your house look neater and cleaner and be an inducement to draw custom, and that is what we are all laboring for. If you have clean looking plants people will buy more and give a better price than if the pot is half full of weeds and the plant half covered with dead leaves, besides being better for the plants themselves.

You would not think much of a merchant if his store was in the condition of more than half the greenhouses in this country, and why should not you keep your place as neat as he does? It certainly is as much for your interest for you

to keep your place neat and tidy as for him, for is not your greenhouse your store or workshop? Try it once and see if neatness does not have as much to do with bringing your trade as perhaps any other one thing. ALFRED B. COPELAND, Springfield, Mass.

News Notes.

MEADVILLE, PA.—Geo. W. Haas added a new house 11x60 last fall.

ST. LOUIS—Oestertag Bros. have removed to 2334 Washington Ave.

LOWELL, MASS.—E. Sheppard & Son have opened a store at 43 Merrimack St.

DURHAM, N. C.—A chrysanthemum show will be given here next November.

LOS ANGELES, CAL.—The seventh annual flower festival opened April 6. A beautiful display was made.

CHARLESTON, S. C.—All the railroads made special low rates to the floral fair and there was a large attendance.

SAVANNAH, GA.—It is announced that the Floral and Art Association will not have any spring exhibition this year.

NYACK, N. Y.—W. Davidson has removed to Tenafly, N. J., where he is building three violet houses each 100 feet long.

CONCORD, N. H.—Florist George Main, who has been confined to the house since January 20, is now able to be out again.

TOLEDO, O.—Mrs. E. Suder has opened an additional store at 323 Adams street, still maintaining the Summit street place.

SEATTLE, WASH.—The Washington Floral Co. has opened a store at 908 Second street, to be conducted in connection with their greenhouses in the suburbs.

BELLEVILLE, ILL.—The St. Clair Floral Co. has been incorporated to conduct a general florists' business; capital stock \$6,000; incorporators, Alexander S. Halsted, Philip A. Kunz, Louis M. Kunz and Mrs. Kate D. Halsted.

PATERSON, N. J.—At the recent election Mr. H. E. Chitty, the florist, was elected alderman from the 4th ward by a majority of 602, his majority being considerably in excess of the entire number of votes cast for his opponent.

SPRINGFIELD, ILL.—The board of supervisors decided by a tie vote not to make the usual appropriation for planting the flower beds in the court house park, but four of the business firms on the square have agreed to bear the expense and the park will be decorated as usual.

DAYTON, O.—Frank J. Kunkel and J. B. Heiss are organizing a stock company to engage in wholesale plant growing and purpose erecting greenhouses comprising 30,000 feet of glass, adjoining the establishment of J. B. Heiss, with office at 116 South Main street.

PITTSBURG.—The first annual chrysanthemum show of the Pittsburgh and Allegheny Florists' and Gardeners' Club will be held at Central Rink, Penn. Ave., this city, November 10 to 12. The premium list has been printed and copies may be had on application to the secretary of the club.

SAN FRANCISCO.—The spring exhibition of the State Floral Society will be held in the Museum Hall of the Academy of Sciences. The date is May 6 to 8 as

previously announced. At the last meeting of the society papers were read upon "Camellias," "Tuberous rooted begonias," "Primulas," "Hibiscus" and "The new lawn."

BUFFALO.—The park commissioners recently presented to the city council a resolution asking that \$100,000 worth of bonds be issued for the permanent improvement of the proposed South Parks and the boulevards and approaches thereto, and the council directed the corporation counsel to prepare an enabling act to be presented to the legislature so that the bonds may be issued.

DENVER, COLO.—August Schenkel, the well known florist, shot and seriously wounded Irwin Lee, an employee, the evening of April 17. In the ensuing struggle between the two men Mr. Schenkel was seriously injured by being pounded over the head with a revolver, and it is thought he will not recover. Lee had been in Schenkel's employ for over a year and they had never before had any trouble. The dispute which terminated so seriously began over a trifling matter.

LOCKPORT, N. Y.—Elisha Moddy, a prominent citizen and one of the oldest horticulturists in the country, died April 18, at the age of 81 years. Mr. Moddy was the first president of the American Nurserymen's Association, and was one of its originators. He was elected to the State Assembly in 1867, and Mayor of Lockport in 1872. Governor Fulton appointed him Commissioner of Horticulture in 1867 to the Paris Exhibition, but he resigned. He was a large property owner, and leaves four children.

WASHINGTON.—Summer setting in so early and suddenly has completely flooded the market with cut flowers. An increase of funerals considerably beyond the ordinary number in April (25 daily) has stimulated trade somewhat in this line, otherwise the supply far exceeds the demand and the hawking around on the streets even of good merchantable roses materially depresses prices. Nevertheless the leading florists are doing "as good a business as can be expected." Hale in both of his establishments makes a more than ordinarily commendable display showing marked good taste in the arrangement of colors; the Gude Brothers are constantly out with novelties; at present it is gladiolus they display "en masse;" Smalls have palms and an exceptionally fine O. Jonesianum in their window; Strauss, Harris and Hydrangeas, while Stude exhibits superb specimens of La France and Am. Beauty, a vase full of the latter having vigorous stems none less than three feet in length and each bloom fully four inches or more in diameter.

Catalogues Received.

H. H. Berger & Co., San Francisco, bulbs, seeds and plants; J. A. DeVeer, New York, bulbs, seeds, plants and florists' supplies; California Nursery Co., Niles, Cal., ornamental trees, shrubs, fruit trees; same, general price list; Wm. Elliott & Sons, New York, special offer of Lilium Wallichianum; Nagel Greenhouses, Minneapolis, Minn., plants and nursery stock; E. V. Teas, Irvington, Ind., nursery stock; Richard Dean, Ealing, London, W. England, flower seeds.

C. J. PENNOCK should be added to the directory list at Kennett Square, Pa., as F.

A Giant Cineraria.

Mr. Peter Macdonald, Summit, N. J., has sent us a photograph of a cineraria. He states that the plant was two feet in diameter, two and one-half feet high, and carried over 350 well developed flowers. The seed was sown August 20, the first flowers were open January 5 and the flowers were still in good condition February 25.

A DOZEN blooms of the Snowflake daisy have been sent us by J. C. Gibson, Woodbury, N. J. Each one is double to the center and all exceed an inch in diameter. It is certainly a very fine double daisy.

You will benefit the FLORIST by mentioning it every time you write one of our advertisers.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

ADVERTISING EXHIBITIONS.

As the plans for exhibitions are being considered don't overlook the matter of advertising. Be your show ever so good it is still necessary to let the people know about it in order to secure their attendance. This is a matter that is frequently overlooked or slighted and such neglect has probably done much to make a financial failure of many exhibitions. The managers of exhibitions are for the time being showmen, and they must—in a measure at least—adopt the tactics of the successful showmen if they would make the show a financial success.

Among your committees there should be one on advertising. This committee should be authorized to expend a stated sum in advertising the exhibition and it is necessary that the committee have its work mapped out long before the exhibition opens. And by the way when attention has been taken on the advertising question and the amount to be expended has been determined, the members of the committee should avail themselves of the first opportunity to incidentally make known to the publishers of the local papers the fact that money will be expended for advertising and that the one addressed will receive a liberal share of the patronage. This has a decided stimulating effect on many publishers and as a result free advance notices come easier. As to the amount to expend for this purpose no ironclad rule can be laid down. It ought not to exceed 20% of the amount you offer in premiums and in most cases probably 10% of that amount would be about right. You should have a liberal advance notice on the Saturday or Sunday before the show opens and then a generous sized card in every day until the exhibition closes. But when newspaper advertising must be the main dependence, especially owing to its value as a stimulator of liberal reading notices and news notes regarding the show, there are other means that should be employed. The committee should have printed on a cardboard of convenient size, an announcement that may be hung up in the store or greenhouse of every florist in the place for at least a month before the opening of the show. Another good plan is to have a similar announcement printed on a slip or card and have florists enclose one in every box of flowers they send out, also in the envelopes with bills, statements and letters mailed. These go to just the class of people you must be sure to reach, and they should be reached early as they are the most apt to be sufficiently interested to speak to their friends of the coming event and thus arouse an interest in others.

Now a word about writing the matter for your announcements in the daily press. Boil your story down to the

fewest possible words. The more matter you put in the space the less display you will have, and you positively must have display to catch the eye. In building up a card of the kind wanted you must have some one bold striking line that is sure to catch the eye, and this line should express tersely your main claim upon public attention. The shorter the line, the larger the type to fill the line and the bolder the display. In our own experience, after trying all possible combinations we settled upon the two words "Flower Show" as the best, taking all points into consideration. The exhibition for which the adv. was prepared was really mainly a chrysanthemum show but the word "chrysanthemum" is not only a very long one but it is also one that would not carry to the minds of the readers of the daily press so clear and distinct an impression as would the one adopted. As an illustration of the thoughts it is intended to convey we give below some advs. prepared for the last exhibition of the Chicago Florist Club. They also illustrate another point and that is that the same adv. should not be used every day. With the exception of the announcement which appeared in the Sunday papers prior to the exhibition, and which occupied much more space than these, and held much more descriptive matter, the advs. are the same as those used, both in space and display. The exhibition opened Tuesday and the adv. for Monday was identical with that for Tuesday except that the words "Beginning to-morrow" appeared in the space occupied by "now open" in the Tuesday adv. Following is the adv. for Tuesday:

SECOND REGIMENT ARMORY.

Michigan-av., between Madison and Monroe-sts.

NOW OPEN.The Chicago Florist Club's
Third Annual**FLOWER SHOW.**

Admission 25 Cents.

Exhibition open from 10 a. m. to 10 p. m. You will miss a treat if you fail to visit this exhibition. Will close Friday evening.

The advs. for Wednesday and Thursday were the same as the above except that the "Now open" was omitted.

The adv. for Friday was as below:

SECOND REGIMENT ARMORY.

Michigan-av., between Madison and Monroe-sts.

LAST DAY

OF THE

FLOWER SHOW.

Admission, 25c. Open 10 a. m. to 10 p. m. Don't miss this last chance to see this beautiful display.

The intention was to have the advs. changed daily, announcing the special feature for the day, as: "Parlor decorations to-day. Table decorations to-morrow." "Table decorations to-day. Wedding baskets to-morrow," etc, but owing to lack of time to prepare the copy the plan was not put into execution. We still think the idea a good one. People like things fresh and new. In this connection we might mention a part of the same plan that was executed, viz: the

preparation of large cardboards lettered with announcements of the special features for the following day. These were posted in conspicuous places around the exhibition hall and were undoubtedly of great value in inducing those who attended once to come again the following day.

We should be pleased to hear from others on this subject.

WE HAVE received a copy of the preliminary schedule of prices offered for chrysanthemums and other plants and flowers at the exhibition to be held at the Madison Square Garden, New York, November 2 to 8 next. Over \$6,000 is offered in cash premiums, of which \$3,922 is offered for chrysanthemum plants, \$724 for chrysanthemum flowers, \$901 for miscellaneous plants, and \$675 for orchids. The prizes are very liberal throughout, those for 25 specimen plants, distinct varieties, being first \$350, second \$175 and third \$125. The prizes for 25 standards are \$150, \$125 and \$100, and for 15 standards \$100, \$75 and \$50. Prizes of \$100, \$75 and \$50 are offered for "group of chrysanthemums arranged for effect, in which palms, ferns or other plants may be introduced, occupying 100 square feet." In miscellaneous plants the leading prizes are for "25 palms grouped for effect," first \$150, second \$100 and third \$50, and for "best collection of 25 ornamental foliage and flowering plants arranged for effect," \$100, \$75 and \$50. In orchids the premier prize is for "collection of plants in flower, arranged for effect, named," first \$200, second \$150 and third \$100. In addition to the cash prizes cups are offered for the best seedlings in white, pink, yellow crimson, bronze and any other color. And a silver cup is offered by the United States Nurseries for collection of named cypripediums in flower. Such liberal prizes should bring out a magnificent display. Copies of the premium list may be had on application to J. W. Morrissey, Sec'y, Madison Square Garden, New York.

A CORRESPONDENT writes that he received some roses from a wholesale grower and the plants of such standard sorts as Malmaison, Mme. Margottin and Bride were only one to two inches in height. He asks us if we would call that first class stock. No, hardly first class, though for 2-inch pot stuff it might be no higher and still be good stock. We have seen plants five and six inches high that were inferior to some having a height of but two inches. The value of a young rose plant depends so largely upon its condition and strength regardless of height that we can not intelligently answer the question.

WE NOTE that some of the premium lists we have received do not give the name and address of the secretary of the organization issuing the same. This is unfortunate for when such address is not given how is anyone interested to correspond with the club?

YOU CAN give the AMERICAN FLORIST your fullest support by confining your orders to those who advertise in its columns, and when ordering mentioning the fact that you were induced to order by the adv. in the FLORIST.

THE NEW YORK daily papers are devoting considerable space to talk about the Union Square Flower Market. And now the Philadelphia papers have caught the fever and are talking up a flower market for that city.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FORTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1901.

VISITED CHICAGO last week: Mr. E. Benary, Erlhart; W. H. Maule, Philadelphia; F. Howcroft, London; Carlos Liebert, Mexico; W. B. Hayt, of Cleveland Seed Co.

GUSTAV DIPPE, founder of the house of Dippe Bros., Quedlinburg, Germany, died at San Remo, in Italy, early in February. He leaves a fortune of five million dollars, the result of his success in improvements in sugar beets.

The Indianapolis *Journal* of April 23 prints the following item: "Margaret Martin brought action for \$1000 damages in the Superior Court, yesterday, against the J. A. Everett Seed Company, whose place of business is No. 141 West Washington street. The complaint alleges that the defendant obstructed the sidewalk causing the plaintiff to fall, and resulting in serious and permanent injury to her."

Coming Exhibitions.

May 6-8, San Francisco.—Annual flower show California State Floral Society.

June 6, Boston.—Rhododendron show Mass. Hort. Society.

June 23-24, Boston.—Rose and strawberry exhibition Mass. Hort. Society.

September 1-4, Boston.—Annual exhibition of plants and flowers Mass. Hort. Society.

September 2-3, Galt, Ont.—Fall exhibition Galt Horticultural Society.

September 15-17, Boston.—Annual exhibition of fruits and vegetables, Mass. Hort. Society.

November 2-8, New York.—Chrysanthemum show Madison Square Garden.

November 3-6, Boston.—Chrysanthemum show Mass. Hort. Society.

November 5-11, Bay City, Mich.—Chrysanthemum show Bay County Hort. Society.

November 10-12, Pittsburg.—Chrysanthemum show Pittsburg and Allegheny Florists' and Gardeners' Club.

November 10-13, Philadelphia.—Chrysanthemum show Penna. Hort. Society.

November 10-13, Chicago.—Fall exhibition Horticultural Society of Chicago.

November 10-13, Minneapolis, Minn.—Chrysanthemum show Minneapolis Florists' Club.

November 10-14, Indianapolis.—Chrysanthemum show Society of Indiana Florists.

November 11-12, Galt, Ont.—Chrysanthemum show Galt Hort. Society.

November —, New Orleans, La.—Chrysanthemum show New Orleans Horticultural Society.

November —, Buffalo.—Chrysanthemum show Buffalo Florists' Club.

November —, Washington, D. C.—Chrysanthemum show Washington Florists' Club.

November —, Providence, R. I.—Chrysanthemum show Rhode Island Hort. Society.

November —, Baltimore.—Fall exhibition and chrysanthemum show Gardeners' Club of Baltimore.

Funeral Designs.

Herewith I send you two clippings from the Toronto *Evening Telegram*, the editor of which has entered on a crusade against funeral designs. You will notice that he slashes right and left regardless of friend or foe and that all the blame for the abuse of a beautiful custom is laid to the door of the florist, the one to whom really least blame is due. It is difficult to understand why this editor publishes these tirades against florists. He is not by any means a mean man. The other day he donated \$10,000 to a sick children's hospital, and I never heard of any circumstance having happened to set him against florists.

Perhaps the editor of the *AMERICAN FLORIST* or some of the readers of that journal can give the florists of this city some good advice in the matter. E.

Toronto, Ont.

[The accompanying clippings were of a tenor to make the average florist's hair stand on end. The editor of the *Telegram* evidently threw the throttle wide open when he penned the copy. But the florists of Toronto have no cause for alarm, and we would advise them to simply ignore such vapors. It would be worse than a waste of time to argue with the author of them. His arguments could be easily picked to pieces and the absurdity of many of his statements could be readily demonstrated to a disinterested party, but never to him. He is evidently a fanatic and any attempt to argue with him would simply add fuel to the fire. Many of the funeral "designs" are certainly open to criticism, but the sweeping condemnation of the editor of the *Telegram* is more than absurd. The intensity of his strictures kills the force of his own argument.—Ed.]

WE HAVE recently had complaint that a swindler calling himself a florist, last fall located in a western city and has been ordering right and left from advertisers' florists' goods and plants. If the same were shipped C. O. D. he refused them, if not he accepted them and sold them for anything he could get, with the evident intention of letting those who had trusted him whistle for their money. We have not sufficiently investigated the case to warrant us in publishing the party though we are pretty well convinced of the correctness of the statements made by the complainant. But we have reported the facts with name to the secretary of the Florists' Protective Association, from whom full information can be had by members. And by the way, every wholesale grower and dealer should be a member of this association. The association can be made a power in the work of freeing out the professional dead-beats who have attached themselves to the trade and it is to the interest of every retailer to assist in the work of extermination.

NURSEYMEN will be particularly interested in bulletin No. 10 issued by the Division of Vegetable Pathology of the U. S. Dept. of Agriculture. It is devoted to the treatment of nursery stock for leaf-blight and powdery mildew and the subject is treated by Prof. B. T. Galloway, chief of the division. Prof. Galloway has made many experiments and says they have proved conclusively that powdery mildew of the apple, leaf-blight of the pear, plum, cherry and quince can readily be controlled at comparatively little expense. The bulletin contains a record of the experiments and descriptions of the

fungicides used with methods of applying. The cost of treatment is also given. Nurserymen may obtain copies of the bulletin by addressing the division at Washington.

ANOTHER complaint regarding the laxity of several well known houses in the trade in attending to their correspondence has reached us. It reads: "A shiftless way to do business. Receive your order and the cash and then let you wait 30 to 60 days for a response of any kind. They might send a postal card to the buyer and inform him that the goods would be shipped in six months or a year." Wholesale growers and dealers who have been guilty of such neglect would do well to put themselves in the customer's position and review the situation. They will find it money in their pocket to give no cause for such dissatisfaction.

THOSE who have been enquiring as to the price of admission to the exhibitions in the larger cities are advised that the admission price to the exhibitions of the Massachusetts Horticultural Society at Boston is 25 cents, and to those of the Pennsylvania Horticultural Society at Philadelphia 50 cents for adults and 25 cents for children. At the exhibitions of the Chicago Florist Club the admission price has been 25 cents.

THE CITY of Toronto, Ont., has 1,046 acres of public parks, gardens and squares. Of the parks the largest is High Park containing 375 acres. Island Park stands next with 300 acres, and Riverdale Park and Queen's Park each exceed 100 acres.

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the *AMERICAN FLORIST*. You will benefit us by letting advertisers know that it is the *FLORIST* that is bringing them trade.

WE UNDERSTAND that an unusually interesting programme is being prepared for the next meeting of the American Association of Nurserymen which will be held in Minneapolis in June.

THE CITY government of Boston is considering the question of decorating the school yards with plants to be planted and kept in condition by the park department.

MR. H. B. BEATTY, secretary of the Florists' Protective Association, has been laid up with La grippe for the last three weeks at his home in Oil City, Pa.

WHEN you write an advertiser tell him that you saw his advertisement in the *AMERICAN FLORIST*.

Tea Roses, .50
Daffodils, .50
Hyacinths, .50
Jonquils, .50
Tulips, .50
Lily of the Valley, .50
Fancy Pinks, .35
We are the only firm in the city that carry a large first class lot of pinks. Our receipts are over 1000 per day.

BLANK & CO., 263 Main St.

1450 PINKS MONDAY. 1450

AND OFFER A FINE LOT TO-DAY.

You are right, I do not carry a large stock of Fancy Pinks, but I do let my customers carry them at 18 cents per dozen. They say they are fine, and that suits me. My Pinks are all fancies and going at only 18 cents per dozen.

I have in my greenhouses 15,000 Blooming Plants of all kinds, you can readily see that my Pinks are fresh cut.

Fancy Roses	\$1.00 per dozen.
Tea Roses	50 cts. per doz.
Daffodils	50 cts. per doz.
Jonquils	35 cts. per doz.
Paper Whites	35 cts. per doz.
Lily of the Valley	50 cts. per doz.
Violets (light or Dark)	35 cts. per bu.
Freeseas	35 cts. per doz.

DASH'S,

OPPOSITE NEW POSTOFFICE.

JACQUE ROSES.

THE BLANK FLORAL CO.,
331 Main Street.

FACTS.

A great deal is said by florists about growing their own flowers, assuming that they can sell much cheaper than those that buy their supply. This is not the case. In the first place the florist that grows his own flowers naturally wants to sell his own growing first. No matter how poor it is, it saves buying. No one disputes that. The florist that grows nothing, but goes into market and buys the best there is, has a far better chance. He can take his pick, and by paying a little more can have the best there is to be had, while he can get second grade stuff for a song—if he is a good singer. These are facts that can't be disputed. Not put too much dependence on advertisements, but compare quality and prices, and you will find that you get better satisfaction from us than from any other place in this section. We challenge competition on Roses, Daffodils, Valley, Hyacinths, Lilacs and any other flowers, while in Pinks, that are so much talked about, we defy any in this market to produce better Buttercups, Pink, Scarlet, Wine, White or Maroon colors. We grow nothing, but buy the best in market, thus always at the head, at as low prices as inferior flowers are often quoted.

Our correspondent advises us that this sort of competition has been going on for some time and was not confined to the dull Lenten season. Also that one of the parties actually bought pinks out of town, paid \$1.50 a hundred for them, to which was of course added express charges, and then paid their help to sell them over the counter at 18 cents a dozen.

This sort of work can not continue long as those indulging in it must know. And the unfortunate part of the matter is that those taking no part are also made to suffer. If it injured none but those engaged in it the natural remedy in the person of the sheriff would in time appear and all would be well, except for the injury which is always done to a business through having retail prices cut below cost.

We believe that moderate prices are better for the trade than exorbitant ones. In the long run, but one extreme is as bad as the other, and flowers, owing to their perishable nature, can not be sold on as small a margin as most other merchandise.

Lilium Harrisii.

In reply to B. Ackley in your issue of the 16th inst. in reference to his one Harrisii with "14 buds and blossoms" I have to say, I had among others this year the following:

1 with 15 buds and blossoms,	
1 " 18 " "	"
1 " 19 " "	"
1 " 21 " "	"
1 " 21 " "	"
1 " 22 " "	"
1 " 23 " "	"
1 " 24 " "	"

8 163

Average 20.

The Florist of the 26th ult. in commenting upon those that I had at the Philadelphia exhibition said: "The Lilium Harrisii exhibited by Michael Sammon, gardener to Jos. M. Shoemaker, Esq., were the finest ever seen in Philadelphia," etc. MICHAEL SAMMON.

Germantown, Pa.

Would say to Mr. Ackley, page 694, the finest of L. Harrisii we have seen lately was at Easter at M. R. Catlin's greenhouses in Richmond, Va. All were exceptionally floriferous, on stems 2 to 4 feet, one bearing 17 fine flowers. This was favorably commented on by a stranger who has seen much in flower culture. H.

In answer to Mr. Ackley, I do not think his Harrisii were anything wonderful. I have had them this season with stems 5½ to 6 feet high and with from 11 to 15 flowers, and now the same bulbs are showing a second crop of from 5 to 6 buds. Bulbs were only 5x7, and out of 350 bulbs I have had flowers from Thanksgiving to the present time.

Belleville, Ill.

E. W. Giv.

Violet Crops Again.

On page 672, AMERICAN FLORIST, Mr. John Wiede gives number of violets picked from 1,200 plants from October 20 to March 31, and wishes to hear from other growers if any have done better. Well, here you are John. I have 744 plants of Marie Louise violets occupying a space of 400 square feet, from which I have picked as follows:

October	1,600 blooms,
November	2,590 "
December	3,555 "
January	5,400 "
February	7,300 "
March	5,425 "

Total 25,870

This is a much better showing as my average from each plant is about 34 blooms, while Mr. Wiede's average is only about 18 blooms.

I have had some violet disease, but could always trace its origin to ill-treatment. I believe that either a very severe drought or overwatering will bring on an attack of violet disease, but have always been able to control it by extra careful treatment. I grow the plants on a bench in 5 inches of soil. House faces south. Night temperature 45° to 50°. Plenty of air in the day time. HARRY DALE.
Brampton, Ont.

Philadelphia.

"EXHIBITION ECHOES" AGAIN.

If Mr. Heacock will read again the notes under the above heading (page 637), he will find that his nor any other's name was mentioned as having exhibited flowers in the "Growers Class" that they had not themselves grown, hence there was no necessity for his defense.

He may rest himself assured that if there had been no occasion for sounding the alarm it would not have been done.

Men and florists who have been in touch with the best interests of the time-honored Penna. Horticultural Society for many, many years unanimously declare in favor of the timely warning.

EDWIN LONSDALE.

Look Out for Him.

A young man by the name of Robert Warj, who has been working for several florists in Louisville, is wanted by his last employers, whom he left without notice.

Description: Age 28, weight about 160 pounds, height 5 feet, 9 inches, color of eyes gray or blue, slightly bald on one side of his head, a dented place across the back of his head where he had been hit with a club he said, nose large and crooked to one side, often spoke of his home as being in Tennessee and of living at Nashville, pleasing manners, but would not look any one square in the eyes. Likely he will assume another name after leaving Louisville. E. W.

 flowers.

DOUBLE WHITE HOLLYHOCKS, strong, one
 year old plants.

CALLAS, one, two and three year old plants.

JOHN P. TONNER, Mont Clare, Ill.

The National Flower.

According to the daily newspapers, what this country needs most of all just now is a national flower.

There seems to be a wild yearning for the adoption, as distinctively American, of some member of the flower family; but the difference of opinion as to the flower to be selected for that honor is remarkably wide.

The following list of blossoms, favored by different people, shows that anything like unanimity of selection is impossible. The young man looking for a rich wife prefers the marigold.

Bill collectors favor the forget-me-not. Temperance people select the waterlily. The telephone girls think the "aloe" most appropriate.

Informers and spies like the "peach" blossom. Anglomaniacs think pennyroyal most suitable.

Oarsmen prefer the rows.

Young men who prosper through their father's prestige choose the son-flower.

Men who want to emphasize America as the country of railroads wish to adopt the carnation.

Individuals, who easily lose their heads, naturally lean to the daze rose.

Pipe manufacturers are fond of the tube rose.

Milkmen fancy the cowslip.

Prudes, the primrose.

Idlers think the dahlia a very suggestive flower.

Aged people naturally select the elder blossom.

Sage is preferred by wise men.

Golden rod seems to suit millionaires best.

The penman, whose Christian name is John, will vote for the jonquil.

Demented people will naturally favor madder.

The sheep raisers' choice is plox.

Virginia-creeper is the piccaninnies' selection.

Builders take to the wallflower.

Lovers are understood to prefer tulips; the man who has passed through the ordeal of popping the question, and the girl who has heard the question and answered it affirmatively, orange blossoms—*U'm. H. Sivilier in Smith, Gray & Co's Monthly.*

A Combat of Flowers.

Last Sunday afternoon, in the Paseo de la Reforma, City of Mexico, was held one of the most remarkable of Mexican festivals—one which it would hardly be possible to celebrate on so grand a scale in any other country—the Combat of the Flowers. It was, in fact, a floral feast. The houses were festooned, the carriages and horses decorated, and every animate and inanimate object adorned with flowers in such lavish profusion that the great place seemed one enormous bed of blooming plants. The feature of the festival was the procession of carriages. Rich prizes were offered for the most handsomely decorated equipages, and the wealthiest and most prominent citizens were competitors. The floral parade moved down one side of the place and back the other, passing before a jury appointed to award the prizes. The streets outside the line of march were packed with people, and every balcony, window and house top had its quota of spectators all of whom pelted the occupants of the carriages with flowers until the air was filled with them.

The first prize, says the *Anglo-American*, was awarded to *Senor Romero Rubio*, Secretary of the Interior. The name of his wife is *Concha*, which means a shell, and over the back of the carriage was an immense sea shell canopy made of eglantines, pink and cream roses, with lance-like leaves shooting up between the flowers. All the other parts of the carriage were concealed by flowers. Mrs. Rubio and her daughters rode in this floral chariot. *Senor Cuato* was awarded a prize for a splendid cornucopia on wheels. The horn of plenty was made of sea-green grass and palms, with thousands of rare flowers woven in. Two children in pink nestled in the mouth of the cornucopia. Another prize was given to Mrs. Maria E. Lizarza, who with her children, rode in a long willow carriage with uplifted palms, immense sun flowers and batchelor-button stars set in, while the children carried white parasols trimmed with flowers.

The basket phaeton of *Guillermo Valente*, chairman of the City Park Commission, must also have been a gorgeous affair. It was decorated with Castilian roses, and snowballs flocked the beautiful gardenia pillow. The canopy columns were crusted with jetty pansies and superb pinks. Laurel leaves were used in the draping of the body of the phaeton; honeysuckles climbed all over the box and even crept over the coachman. The lance was tipped with flowers bound with blue ribbon, and some eight or ten different kinds of roses hung to the willow whip, while the horses and harness were covered with rich star-like flowers.

In addition to the hundreds of lavishly-decorated carriages, there were a number of floats, among which the one contributed by the American colony was conspicuous. It was a model of the first steamer, the *Robert Fulton*, 24 feet long, and the entire ship, starboard and larboard, fantop and keel, was buried in a mass of Mexico's fairest flowers. Boys stood on the deck and threw bouquets at the spectators.—*St. Louis Globe Democrat* April 19.

W. T. STEPHENSON, Petersburg, Ill.

CONCERNING Propagation of Plants.

A COMPLETE HAND-BOOK OF PROPAGATION AND POLLINATION.

THE NURSERY BOOK has been prepared with the utmost pains. It embodies the experiences of many experts. The author, Prof. L. H. Bailey, editor of the *American Gardener*, has been engaged in its preparation for many months, and has visited many nurseries and specialists, gathering material upon technical points outside of his practice. The whole volume has been read and criticized by Prof. B. M. Watson, of the Bussey Institution, one of the best propagators in this country. All available authorities have been consulted, and particular parts have been submitted to experts. The fruit matter has had the criticism of leading nurserymen, and the head propagator of probably the most important nursery in America has been freely consulted. The Orchid matter has been prepared by W. J. Bean, of the Kew Royal Gardens. The instructions in the nursery list, which gives the definite methods for each plant, have been read by at least four persons. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology, nor with any abstract reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The nearly 100 illustrations are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, forest trees.

CONTENTS.

CHAPTER I.—SEEDING. CHAPTER II.—LAYERAGE. CHAPTER III.—SEPARATION. CHAPTER IV.—STOCKS. CHAPTER V.—GRAFTAGE. Including Grafting, Budding, Inarching, etc. CHAPTER VI.—NURSERY LIST. This is the great feature of the book. It is an alphabetical list of over 2,000 varieties, with a short statement telling which of the operations described in the first five chapters are employed in propagating them. The following entries will give an idea of the method.

ACER (MAPLE). Sapindaceae. Stocks are grown from stratified seeds, which should be sown in a trench or two deep; or some species, as *A. dasycarpum*, come readily if seeds are simply sown in the open. Some cultural varieties are layered, but better plants are obtained by grafting. Varieties of native species are worked upon common or native stocks. The Japanese species are winter-worked upon imported plants. Stocks, either in sharp sand, or veneer-grafting. Maples can also be budded in summer, and they grow readily from cuttings of both ripe and new wood.

PHYLOCACTUS, PHYLOCKRUS, DISCARTIA. Cactaceae. Seeds, for the raising of new stocks grow readily. Sow in rather sandy soil, which is well drained, and the water is kept off. When the seedlings appear, remove to a light position. Cuttings from mature shoots, three to six inches long, root readily in sharp sand. Give a temperature of about 60 degrees, and apply only sufficient moisture to keep the plants from drying. If the cuttings are very juicy, they may be laid on dry sand for several days before planting.

GOOSEBERRY. Seeds, for the raising of new varieties, should be sown as soon as well cured, in loamy or sandy soil, or they may be stratified and sown together with the sand in the spring. Cuttings six to eight inches long, root readily in sharp sand, inserted two-thirds their length, usually grow readily, especially if taken in August or September, and stored during winter. Stronger plants are usually obtained by layers, and the English varieties are nearly always raised this way. Non-stem layering is usually employed, the English varieties being allowed to remain in layers. The American varieties of old (Fig. 27), layered plants are usually set in nursery rows for a year after removal from the stocks. Grafting during summer is sometimes practiced for new or rare varieties.

CHAPTER VII.—POLLINATION.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness,
smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT**
of same, which speaks for itself:

Size.	No. in Crate.	Weight
1 1/4-inch.	3,000	250 lbs.
"	2,400	250 "
"	1,750	250 "
"	1,450	250 "
"	1,280	350 "
"	800	350 "
"	600	550 "

It will be seen at a glance, that our pots are one-
third lighter than formerly, and yet we claim that
owing to the superior quality of our clay and im-
proved machinery, they are stronger than any pot
in the market, and we frankly ask you to make the
test. **SEND FOR PRICES.**

LATE ADVICES from Holland indicate considerably higher prices for Narcissus Van Sion. Mammoth yellow crocus have been injured by the severe winter. Hyacinths in general are slightly higher in price. Some tulips are scarce and some varieties more plenty than last year averaging probably about the same.

WHEN WRITING advertisers please say that you saw the adv. in the AMERICAN FLORIST.

Floriculture in the U. S.

Superintendent Porter, of the census bureau, has issued a bulletin on the subject of floriculture in the United States. The material from which the statistics are compiled was obtained direct from florists upon schedules specially prepared for that purpose and by personal visits (of special agents to florists' establishments in all parts of the country.

It will be noted that while floriculture has been carried on as a business in this country for upward of one hundred years it is only within the past twenty-five years that it has assumed large proportions. Out of a total of 4,659 establishments 2,795 were started between 1870 and 1890, and of these 1,797 between 1880 and 1890. There are 312 commercial establishments owned and managed by women. These 4,659 establishments had in use in the census year 38,823,247 square feet of glass, covering a space of more than 891 acres of ground. The establishments, including fixtures and heating apparatus, were valued at \$38,355,722.43; tools and implements, \$1,587,693.93, and gave employment to 16,847 men and 1,958 women, who earned in the year \$8,483,657. Fuel for heating cost \$1,160,152.66. The products for the year were 49,056,253 rose bushes, 38,380,872 hardy plants and shrubs, while all other plants amounted to 152,835,292, reaching a total value of \$12,036,477.76 for plants. Cut flowers brought an additional income of \$14,175,328.01.

From the tabulations in the bulletin it appears that the largest number of square feet of glass in one establishment in the United States is in the District of Columbia; the oldest establishment was started in New York; the largest number of roses propagated were, respectively, in Pennsylvania, Illinois and Ohio; the largest number of hardy plants propagated were, respectively, in Illinois, New York and Kansas; the largest total value of plant sales were, respectively, in New York, Pennsylvania and California, and the largest total value of cut flower sales were, respectively, in New York, Illinois and Pennsylvania.

In addition to the Society of American Florists 965 state and local floral societies and clubs and 358 horticultural societies, aided by the agricultural and horticultural press, helped to develop this industry to its present large proportions.

After inquiry of every florist in the United States, the report indicates that there was but one commercial florist in the year 1800, and only three establishments stated between 1810 and 1820: 8 more were started in the next decade, 25 in the next, followed by 45 between 1840 and 1850, 96 between 1850 and 1860, 313 between 1860 and 1870, 998 between 1870 and 1880, and 1,797 between 1880

and 1890. The reports show that 80 per cent of the whole business has been developed during the past 25 years.

Floral establishments were found in every state and territory except Idaho, Nevada, Indian Territory and Oklahoma.

In number of florists' establishments New York leads the list with 793, Pennsylvania stands second with 544, Massachusetts third with 407, Ohio fourth with 393, New Jersey fifth with 366, Illinois sixth with 330, Michigan seventh with 167, California eighth with 150, Missouri ninth with 141, Connecticut tenth with 120, Indiana eleventh with 107, Wisconsin twelfth with 105, Maryland and Rhode Island have each 102 and the other states less than 100.

In amount of glass surface New York again leads with 6,947,298 square feet, Pennsylvania second with 6,066,144, New Jersey third with 3,703,554, Illinois fourth with 3,290,750, Ohio with 2,785,192, Massachusetts sixth with 2,717,946, Michigan seventh with 1,293,442, Missouri eighth with 1,240,095, Connecticut ninth with 1,060,920, Kentucky tenth with 1,163,241 (81 establishments), Indiana eleventh with 899,549, Maryland twelfth with 872,304, Louisiana thirteenth with 742,050, District of Columbia fourteenth with 649,310, California fifteenth with 610,622.

The following table shows the money invested in the business and the annual sales of plants and cut flowers in the ten leading states:

	Total value of estab-lishments.	Total plant and cut flower sales.
New York	\$9,254,373.03	\$5,844,388.57
Pennsylvania	5,641,513.92	3,663,989.76
New Jersey	3,666,518.46	2,186,387.14
Illinois	2,945,442.50	2,494,519.00
Massachusetts	2,663,587.08	1,630,462.35
Ohio	2,590,228.56	1,637,337.42
Michigan	1,165,484.65	340,305.12
Missouri	1,078,882.65	870,491.42
Connecticut	986,655.60	431,111.90
Kentucky	918,960.39	613,407.33

New York City Union Square Flower Market.

If ever there was a step in the right direction this is one. To the Park commissioners, to Aldermen Morris and Dowling, to Judge F. P. Daly and those growers who are desirous of spreading broadcast the love for flowers, are the people of New York indebted for this great, good and glorious privilege.

As a matter of course this good work has met with more or less opposition, but the opposition came only from those who were afraid to trust themselves in open competition. The idea of opposing such a good work is preposterous and absurd.

We must have in New York a public flower market. The people demand it, and the store keepers need not fear for

their business if they only keep up to the times. Some people want to control the universe. When it comes to dictating how many butchers' shops and how many dry goods houses there are to be in each city it comes pretty near anarchy.

The Union Square Flower Market is a success in spite of its crudity and rather large proportion of poor plants. On Saturday morning, April 24, there were in line 47 wagons. This was the first time the market was kept open until 8 o'clock. The retail buyers between 7 and 8 o'clock cleaned out everything and it is safe to say that there was not \$50 worth left unsold.

There will be more plants sold from this market than from all the other sources in New York. It is only the beginning of what New York ought to have had 25 years ago. The store keepers need not fear the market will hurt them; it will not; they will sell more plants than ever, as the love and demand for plants grow.

I am for the greatest good for the greatest number, and am sorry, very sorry, to disagree with your Young correspondents.

JOHN THORPE.

Notes on Some of This Year's Seed Novelties.

BY WM. FALCONER.

CHINA ASTERS.—Several "new" ones are offered, but we have got to grow and test them before we can say much about them. Among them are Snowball, like a "Liliput Dahlia;" Jewell, "the finest of the peonia flowered section;" Zulu King, "of faultless globular shape and black purple color," and a "pure yellow" Victoria aster called "Aureolin Beauty." There is a large run on Comet asters and they deserve it; but I can not get up the enthusiasm for Triumph asters that some folks show.

AUBRIETIA LEICHTLINI still holds a front rank. It is a hardy perennial of dense, low, carpet-like growth and bears red-purple flowers in great abundance in April and May. It is the reddest of all the aubrietias. And it is easily raised from seed and seedlings a year old make mats a foot wide and bloom profusely.

ASPARAGUS PLUMOSUS NANUS.—Although not a new plant it is a good seed novelty. We have usually propagated it by division or layers and with how much quickness its continued high price bears testimony. If seeds were plentiful the "fern" asparagus would soon be plentiful enough too. By the way, why is it that my "nanus" won't stay nanus?

AQUILEGIA.—There are several of these, but nothing new. Grigor's glandulosa and Stuart's hybrid are both lovely, but not sturdy enough. In the way of columbines (aquilegias) let me advise you get Sibirica, cerulea and its white variety, Olmepica, formosa, truncata and chrysantha, which are the cream of the lot. We have also Munstead white, a handsome short-spurred variety. In the great hybrid race it isn't so much a matter of getting hybrids as it is of preventing hybridization, as no genus mixes more readily than aquilegia. But a good red is hard to fix. Some 12 years ago we had "Bebbs' Hybrid," an exceedingly large rose-purple variety that was strikingly fine. Have any one now got it pure?

St. Bridg's ANEMONES are still offered as novelties. They are easily raised from seed, easily grown and bloom the following spring, and they are very pretty and showy. Although hardy here they flourish better when wintered in a cold frame.

ARNERIA CORNUATA, an annual species of much promise, was a last year's novelty. It grew well, was a little rough perhaps and bloomed splendidly with us last summer. But we didn't save any seeds of it. And although I find it advertised in several catalogues this year I have been unable to get any seed of it.

ARNERIA MACROTHYRSA is a new perennial species from Asia Minor and offered in limited quantity this year. It is said to be a robust species, more than a foot high and having erect trusses of handsome yellow flowers, and it is suggested that probably these are spotted with black as is mostly characteristic of the genus.

AGERATUM CELESTIAL,—A dwarf, compact variety, about six inches high with large umbels of light blue flowers. Ageratums, tall and dwarf, grow very readily from seed, but I have found in the case of the dwarf especially, that the seedlings come somewhat uneven, and in order to have thoroughly reliable stock it is well to select the types one like from among the seedlings and propagate them by cuttings or division.

ANCHUSA CAPENSIS is included in a list of novelties. This is a step in the right direction, for although it is an old plant it isn't generally grown, and it is one of the loveliest of garden plants. I raise it as a pot plant for March or later blooming, also as a summer annual, and it is so easy to manage and generous and its flowers are of such a deep blue tint and forget-me-not make up that it is quite a favorite. And there is not a whiff of the coarseness of A. Italica about it.

BERTERIA MUTILIS, a herbaceous, perennial allysum, with spikes of white flowers. Very easily gotten up from seed.

BEGONIAS.—The tuberous-rooted section of begonias is continually affording us new varieties from seed, hence like cannas or chrysanthemums it may be styled a perennial novelty. But particular stress is given to B. Credneri, which is a hybrid between B. Scharfiana and B. metallica. The habit is like Scharfiana and the color and form of the leaves like metallica, the flowers excel those of both parents. "Faust," a new tuberous-rooted variety, the best red in existence, shaded with black.

CARNATIONS.—I am not a pessimist, at the same time I can not join in this continuous hurrah for Grenadin or Marguerite carnations. Both are good and beautiful in their place, and most all that is claimed for them is true enough. Let us take the Marguerite for instance. It comes up from seeds very freely, and the seedlings are of compact habit and will bloom the first year, and bloom freely and for a long time, and show a large proportion of double flowers. But the flowers are somewhat small, of rather flimsy make up, and although they display a great range of color much of it is poor. And the plants in our grounds proved no harder than other carnations.

CATHARTIA VILLOSA, a poppywort from Sikkim, perennial, best treated as a biennial, yellow flowered and pretty, but not quite hardy.

CHRYSANTHEMUM CARINATUM FLORE PLENO.—A new double-flowering race of hardy annuals, but I shall have to bloom them before I can say much more about them than that the seed germinates well and the plants grow freely. If I mistake not C. coronarium and C. carinatum have got considerably mixed up in some lists. In either case, however, I can not

say that I consider the plants indispensable to our gardens. The plants grow and bloom well enough, but no one seems to want to cut the flowers and after midsummer the blooms get small.

CORONOPSIS GRANDIFLORA is a herbaceous perennial of neat habit and very free blooming; in short, it may be described as the finest form of C. lanceolata, and it is as hardy.

CALENDULA ORANGE KING is said to have the largest and most perfect flowers and the deepest colored of any of the pot marigolds. It grows readily from seed.

CALENDULA SUFFRUTICOSA, "a dwarf variety, grows about 9 inches in height and has bright yellow single flowers."

CANNAS, CROZY'S.—The widespread popularity of these low-growing handsomely flowered cannas gives us encouragement to raising young plants of them from seed in order to get new varieties. Most of the seedlings will bloom the first year. Seeds sown out of doors in May are more apt to vegetate than those sown inside in February or March.

CANNA FLACCIDA "The King."—Grows "only about 16 inches high * * * and has enormous flowers from 4 to 5 inches across." Sulphur yellow color. The trouble with C. flaccida is that its flowers are flimsy.

CARMAN'S HYBRID CASTOR BEANS.—The editor of the *Rural New Yorker* at his home in New Jersey had a large bed of different sorts of ricinus or castor beans, and like corn or cucumbers growing together they got intermixed. The seedlings raised from these plants may or may not resemble their parents. With castor or other sub-tropical plants I prefer to know exactly before planting how the plants will turn out, for if I don't my planting is only guesswork and the effect probably a failure.

DELPHINIUM CARDINALE, one of the scarlet larkspurs of California, is boomed a good deal. It is easily gotten up from seed and very beautiful when in bloom, but hard to manage after the first year and in fact not very hardy. It comes from the mountains of S. California. Another scarlet-flowered Californian species is D. nudicaule. Both require much the same treatment and both have somewhat tuberous roots. Neither are new, I have grown them both for a dozen years.

DODECATELON CLEVELANDII was sent out last year with a great flourish, but where is it to-day? Now this is one of the plants that does not prove satisfactory as a seed novelty. The plant itself is a beautiful perennial well worth growing, and the seeds are good and will grow, but it is a long, painstaking and tedious job to get up seedlings to blooming-plant size, in fact, the game is hardly worth the candle.

THE "SCARLET" MEXICAN THISTLE (*Erythrolena conspicua*) is what I call a one-season novelty. It is a biennial and it isn't hardy and it is hardly worth bothering with to winter indoors; at the same time it is distinct and showy and will be pleasing as well as interesting to many.

GIANT ESCHSCHOLTZIA is an extra large flowered form of E. Californica. A very beautiful and easily gotten up race of plants, and the flowers are excellent for cutting, notwithstanding their poppyhood. In California they are perennials,

TABLE CENTER PIECE

here on account of climatic conditions they are best treated as annuals.

GLOXINIA "EMPEROR FREDERICK" is a new large flowered variety with a fiery scarlet throat and white edge. Last year's novelty Defiance bloomed well with us and had vivid crimson-scarlet flowers of middle size. While it would be well enough to list distinct types of gloxinias as novelties, I am inclined to think that singling out these individual varieties as novelties is a little too far-fetched.

Center Piece.

The illustration shows a center piece that we have used many times in the past year, but it is capable of so many good combinations that we do not tire of it.

It consists of a cut glass bowl, mirror and wreath. The one shown was filled with "Watteville" roses and maiden hair ferns. We know of no more effective way of using a few flowers; it is far ahead of any plateau with the same number of flowers, and gives very many more opportunities for displaying taste, not only in the combination of colors, but in the graceful arrangement of the flowers used.

For a small round or square table it is quite sufficient. If a long table, we often use wreaths that harmonize, on each end, surrounding the base of the candelabr..

If it is desirable to make it still more elaborate or expensive, clusters for the ladies may be added.

The following are some of the combinations that we would suggest, many of which we have used:

Pink carnations with natural foliage, no other green. That includes all the pieces, viz:—The cluster for the bowl, wreaths and clusters for the ladies and the button-hole bouquets for the gentlemen, all having natural foliage arranged with them. If we use tulips for the bowls and wreaths, we should use a smaller flower for the ladies' clusters, possibly valley, but not tulips.

Make the wreaths of a variety of ferns, with a few cypripediums mixed through, and the same for the bowl and the effect is excellent. In this case a little color for the ladies' cluster is advisable, for instance, one or three cattleyas, or several hybrid roses tied with ribbon to match.

White and green decorations have been much in favor, and are easily carried out with this style of decoration.

Still another pretty effect can be produced by using violets for the wreaths and ladies' clusters, with sprays of acacia and several daffodils in the bowl.

We have used daisies in all the pieces with good effect. And *Narcissus poeticus* properly and profusely used is charming. In this case we should make the wreaths

rather flat, that is wiring all the flowers so that they may stand erect, showing the whole face of the flowers. In the bowl we should let them have their own sweet will, using lots of their own foliage and arranging carelessly. Mignonette, ferns and pink roses are always pretty together. Boz.

Floral Arrangements at New York Show.

Regarding the arrangements of which we gave illustrations on pages 718 and 719 of last week's issue, Mr. John Thorpe writes as follows:

"Dinner table decoration for 12 persons: The first premium was awarded to Mr. G. Stumm. There was a great deal too much material on the table. The flowers, mostly pink, were of first quality and elegantly arranged, but in the center the flowers were high enough to hide your vis-a-vis. When will there be a decoration to admire in these public competitions? Every one of the table decorations had this objectionable feature. Too many flowers and badly arranged so far as interfering with the line of sight.

Mr. LeMoult's second prize table was a poem in green and bronze living plants. The composition as a bank of plants could not be surpassed, but like the first premium arrangement it was impossible to see your friend opposite without getting

on your feet. If the arrangement had not had these objections it would have won.

"All the tables (5) were equipped with plate, glass and crockery and I am satisfied that there was too much of this on every table.

"A. McConnell's first prize basket was a splendid piece of work. The flowers were excellent, the taste displayed could not have been better. It was the admiration of all. The flowers used were Magna Charta, Luizet and La France roses, lily of the valley, a few orchids, maiden hair ferns and smilax.

"Stumpff's first prize vase of 100 hybrids: These 100 hybrids were truly superb. The variety was Baroness Rothschild, the blooms arranged in a vase fully four feet high, the vase being of an olive green tint and of elegant shape. Partly covered with smilax and ribbons it was a very beautiful piece of work. The illustration does not do justice to the effectiveness of this fine display."

New York.

Business has improved since last report. Although roses continue very plentiful the increased demand has made the average prices better.

Lilac, daffodils and other outdoor flowers are being received in large quantities from the south.

There is a limited quantity of orchids coming in at present, but Mr. L. Forstermann, of Newtown, furnished us with a treat in this line by sending in some of the finest Cattleya Trianae that were ever seen here.

Mr. John H. Taylor has offered a silver cup for the best bouquet of admiral Cusin roses to be shown by the grower at the great exhibition to be held at the Madison Square Garden November 2 to 8. In addition to this Mr. Taylor has made a large entry of chrysanthemums.

It is to be hoped that the Madison Square Garden people will make suitable arrangements with the Florists' Club here so that as a body they will endeavor to make the show a success. They have clearly illustrated and shown what they can do by making their recent exhibition one of the finest ever seen in this country. I have no doubt but what these arrangements will be made and by one more united effort by the club the people of this city will be enabled to have another grand show.

Mr. E. Low, of High Low & Co., of London, who has been so very ill at the Hoffman House, has been advised by his physicians to return immediately to England. Mr. John Thorpe will complete Mr. Low's route, starting west last Thursday for this purpose. Mr. Thorpe will visit during this trip Pittsburg, Cincinnati, Cleveland, St. Louis, Chicago, Buffalo, Albany, four other and other large cities. Messrs. Low & Co. are to be congratulated on securing the services of Mr. Thorpe, as it is believed there are but few better posted on choice orchids and palms, or having a more general knowledge of flowers than he.

There have been several important decorations during the week, one of the principal events being the banquet given under the auspices of the American Protective League. The decorations were in charge of Mr. W. S. Lee, of Ellis Co., and were very extensive. The dinner being American in all its details the principal flower used was the American Beauty. Large quantities of this beautiful rose were placed in vases on all the tables and hung in bunches from the pillars and

balconies. Upon each table also were plaques of growing spring flowers such as tulips, white narcissus, pansies, lily of the valley, etc. The front of the balcony and walls of the room were festooned with ropes of smilax, asparagus and laurel.

There were several van loads of palms used in the hall, some very fine specimens coming from the extensive nurseries of James Weir & Sons, Bay Ridge, N. Y.

At the wedding of Miss Van Tassel Mr. Alex Warendorf made one of the finest decorations ever seen here. The ceilings were festooned with smilax and asparagus with roses run in between. In each room Mr. Warendorf had a distinct feature and had a fine opportunity of showing his ability in this line. The canopy was made of Bride roses and lily of the valley edged with Adiantum Farleyense. The bridal bouquet was made of cattleyas and lily of the valley.

Mr. C. W. Mathesen had the decoration for the wedding of Miss Rainsford. The house was beautifully decorated with palms, azaleas, etc. The canopy for this occasion was made entirely of Madam Cusin roses. Upon the mantels were placed solid beds of American Beauty roses. The stairway was decorated with smilax interwoven with Jack roses, in fact Mr. Mathesen had turned the house into a lovely conservatory. He had also the church decoration in which he used large quantities of apple blossoms and lilac.

Mr. Herman Kuhn at the wedding of Miss Martha Benedict displayed his usual good taste. The mantels were banked with Baroness Rothschild roses and the chandeliers of flowers had a background of rare palms; ropings of lily of the valley and asparagus were arched up to a marriage bell made entirely of Bride roses.

In giving an account in a previous issue of the decoration at the wedding of Miss Dillingham I should have mentioned that the order was executed by Mr. Kuhn.

Mr. W. H. Ellis sailed for Europe on the Germanic Thursday morning for a brief vacation.

Miss Anna Hauptner, of the Alpine Floral Co., has not yet recovered from the poisoning on her face and hands received as she thinks from handling plants at Easter.

The florist trade on Broadway from 20th to 33rd street is very well represented, there being 13 stores there now with the prospect of the addition of one or two more before fall. JOHN YOUNG.

Echoes from the New York Show.

The John May Prize—original design in roses—canoe and lamp. Owing to some misunderstanding among the exhibitors a very unfortunate circumstance occurred. In the original schedule the time set for awarding this prize was 11 a. m., but during the show some exhibitors were informed that the awards would be made until 2 p. m. Thursday. Result: Those who were on 11:30 time had a chance to win, and those on 2:30 time had no chance to win, because the premium was awarded at 11:30. This caused some disgruntlement and as a matter of course sundry unpleasant remarks. The canoe won because it was the first time. The lamp would certainly have won had it been lighted at 11:30 instead of waiting for the p. m.

The canoe was a very beautiful piece of workmanship, hardly original though. The Baroness Rothschild, Merville de Lyon and Mabel Morrissons, of which

it was composed, could not be beat—they were A-1. It was entered by Mr. J. W. Seelen and won.

The lamp standing five feet high, shown by Mr. J. B. Nugent, Jr., and to whom a special first was awarded, called forth the admiration of everybody. It certainly was a masterpiece. The harmony and general effect, the quality of the flowers and the good workmanship was patent in every detail. No finer Jacqnet than those which formed the greatest number were ever seen in New York. The Magnas, the Bonness and her compatriots were equally fine. Incandescent electric lights added so much to the realism that it suggested a new field for electric lights in flower combinations.

In the competition for the Jansen prize at the exhibition of the New York Florists' Club A. Warendorf received first.

Out of the dozen baskets in competition for the prize, this, the winner, was the worst of the lot. It was a rose basket of few flowers and the quality was not A. 1. Jacqnet and Prince Rohans were the only varieties. The flowers were soft and going rapidly when the premium was awarded. But the basket had no ribbons on and there the die was cast.

Now I am not opposed to ribbons associated with flowers in their proper place, but really some flower pieces of late have looked more as though they came from a millinery store than a florist's, and the rebuke may have a good result. In fact results were evident during the competitions of Thursday, Friday and Saturday of the show. Not a ribbon was in sight. What did this mean? That competitors felt that no ribbons was the correct thing?

The second prize basket shown by Mr. A. Merritt was a basket of orchids, a lovely combination. The third was from A. McConnell, of superb La France roses. Both these baskets were profuse in ribbons.

A man lost a \$5 bet on these baskets. The bet was that the second basket would be first and the third second and the first distanced. It proved that light weights are often dangerous. JOHN THORPE.

Baltimore.

Small, smaller, smallest, if coupled with show, exhibits and patronage will exactly describe our spring show. The only thing really on a grand scale about it was the hydrangeas exhibited by Mr. Conrad Dies, which were really superb and in great quantity, fully 150 plants of uniformly good size and condition being shown, very many having two dozen heads of bloom, each a foot in diameter; all were well furnished with foliage of the largest size and averaged four feet in height. Cacti were exhibited in great variety by Mr. Ed. Herrmann. Mr. Bauer had a large and very varied assortment of bedding plants. Branteridge & Co. had a tastefully arranged exhibit of orchids. There were three entries for table decoration, two of them, those taking first and second by the way, being on benches three feet wide; the other being somewhat more like an ordinary dining table failed, not because of not doing enough, but because he did too much, for a really tasteful decoration of adiantum sprays and buds was made to appear heavy by two great masses of violets at each end of a central group of roses and lilies.

The attendance was, notwithstanding the delightful weather, phenomenally small, being but little more than enough to pay hall rent. Cause why? First,

FIRST PRIZE CORSAGE BOUQUETS AND BOUTONNIERES AT EXHIBITION OF THE
NEW YORK FLORISTS CLUB

Mr. John Thorpe was in the city Tuesday and Wednesday of this week.

Boston.

The supply of roses and carnations in the cut flower market has decreased greatly and prices have improved accordingly. The street peddlers who for the past fortnight have been revelling in loads of fancy roses now find it necessary to turn their attention to daffodils, May flowers and pansies instead. Outdoor stock is very plentiful at prices which can hardly pay for picking and packing.

The much talked of florists' exchange is finally under way, but as an individual enterprise only. The plan is somewhat novel and it will require time to prove whether it will be a success or not. If it accomplishes anything toward abolishing the primitive practice of peddling their flowers by hand in the morning as is the custom with most of the growers about Boston, certainly no one with the best interests of the trade at heart can object. The scheme includes plants as well as cut flowers. In the meantime some of the big "bazaar shops" are making great raid on the seed and plant industries by advertising in big letters flower seeds at 10 cents per dozen papers, roses at 12½ cents each, tuberose bulbs at 3 cents per dozen and are following suit to certain seed houses in booming the glories of those two undesirable weeds, *Ipomœa pandurata* and the "Cinnamon Vine." W. J. S.

Philadelphia.

Bedding plants are going lively and the men making a specialty of this line are up to their eyes in business.

The wholesale price for this class of plants is as follows: Geraniums \$8 per 100 for 4-inch; in fact nearly all bedding plants in 4-inch pots are sold for the same price; 6-inch pot geraniums, fuchsias etc. bring from \$2 to \$3 a dozen; 2½ and 3-inch stuff sells for from \$4 to \$5 a 100; good root roses, 6 and 7-inch pots, own roots, from \$4 to \$6 a dozen, except hybrids, which bring 60 cents to \$1 each.

Robert Craig has a fine lot of gloxinias and tuberous rooted begonias. He says they are selling as fast as he can get them in flower. His stock of young roses is very fine, the plants being clean and healthy.

Karl Miller's pelargonium house is a show; some specimens are as full of bloom as an azalea.

Edwin Lonsdale has sold his rare orchid. It was picked up by an English collector. Our genial friend has been housed for the past week with a sprained ankle. We are glad to say, however, that he is about and himself again.

Mr. C. H. Ensinger has resigned his store on 13th street and will give his entire attention to his country place.

S.

Corsage Bouquets and Boutonnieres.

The illustration shows the six corsage bouquets and six boutonnières which won for K. A. Merritt the Horan prize, a silver cup, at the recent exhibition of the New York Florists' Club.

The competition was very strong in this class and without doubt the best won.

The illustration does not give the best impression of this fine exhibition; the exhibit was greatly admired and it was one of the awards that met with universal approval. Critics ventured to say, however, that there was a superfluity of ribbons.

insufficient advertising, the committee in charge having neglected the ordinary and usual thing even of putting a conspicuous sign in front of the building in which the show was held, and nothing having been done except to place a two-inch "ad" in the leading dailies; second, an unsatisfactory place, at least to many growers; the concert hall of the Academy of Music is a prettily frescoed and lofty room, but it is up quite a long stairway, and anything that is going on there has to compete with the attractions of the main auditorium; third, perhaps the really serious and insurmountable obstacle in the way of most of our spring shows, the shortness of the time between winter and summer which crowds a great amount of work into a few weeks, makes the grower so exceedingly busy laying up bread and butter that he has neither time nor inclination to pay much attention to getting up show stuff and taking it to an exhibition, and even has its effect upon those who patronize the shows; the ladies with their summer wardrobes to prepare, the gentlemen with the struggle for spring trade in their minds, have little desire for a quiet hour with the petted darlings of dame Nature.

As at the chrysanthemum show our friends and neighbors from Washington were over and judged the exhibits in a very impartial and satisfactory manner, and the pleasure of listening to their friendly criticisms at the dinner that was given, in a measure relieved the annoyance of the silence and loneliness that vexed one in the exhibition hall. MACK.

Chicago.

The market shows signs of improvement this week. Roses are still very plentiful, but the cut is considerably less. Prices of all varieties, however, with few exceptions remain about the same as last week. Jacys are decidedly scarce, and so are Beauties and hybrids.

Outdoor grown bulbous stock pours in in great quantity, tulips being particularly plentiful. Unusually good stock is

shown this year by a few growers, notably by Mr. Chas. Northrup, of La Grange. Mr. N. is noted for forcing some of the best tulips ever seen in this market, and his stock grown in the open ground this year is certainly very fine. Some varieties which deserve special mention are: Crowne d'Or, Rosine, Prince de Austria, Royal Silver Standard, La Citadelle and Duchess of Parma; the latter in particular are superb. A number of growers when shown flowers doubted that it was this variety. The whole habit of this sort seemed to have changed. Instead of a weak stem as seen when forced under glass, it showed up bold and upright with fine heavy stem and a size of flower certainly remarkable. There is a violent contrast between this stock and much of the stuff on the market, evidently grown in that happy "go as you please" fashion for which many of our gardeners are noted.

Daisies, single and double, are plentiful and selling at low prices.

R. J. Donovan is picking some very fine violets of a dark blue, double Russian variety, outdoor grown which bring from 75 cents to \$1 per 100. Mr. Donovan grows this violet under the shade of some oak trees on his place at Highridge. The plants are very vigorous and perfectly hardy. They bring but one crop a year, generally lasting from ten to fourteen days.

Valley from the open ground is just making its appearance.

Messrs. James and William Currie, of Milwaukee, were in the city Monday.

The next meeting of the Florist Club promises to be mighty interesting. In addition to the discussion upon the judging of floral arrangements there will probably now be a discussion on the why of the whiching regarding the appointment of chief of the Hort. Dept. of the W. F.

One of the large dry goods stores has added a floral department and roses can now be purchased at the regulation dry goods store prices, viz.: 39, 49 and 59 cents a dozen.

It is too bad that there are not second premiums in all these competitions. In this case, if there had been, Ellis & Co. would have been an easy second.

JOHN THORPE.

OBITUARY.

HENRY NANZ, SR., the pioneer florist and nurseryman of Louisville, Ky., died May 1.

Mr. Nanz was born in Stuttgart, Germany, in 1819, and learned his trade in the famous nurseries and gardens of that place. He came to this country in 1847, landing at New Orleans. He first tried his fortunes in Texas, but sickness compelled him to find a better climate. He came north with the United States soldiers who were returning from service in Mexico. When he landed in Jeffersonville in 1848 he was penniless. He first found employment at the famous Spring Garden, and after the collapse of that concern became gardener to the celebrated Ward family. Their conservatory soon showed the effects of his skill. He was in charge of it at the time when a mob endeavored to destroy the Ward property in 1853 and valiantly, but vainly, endeavored to save his floral treasures.

By diligent economy and persevering activity he was enabled to lay the foundation for his now famous business, and bought an acre of land on Third street, between Breckinridge and Kentucky, then considered away out of town. The rapidly growing city and the ever increasing demand for his goods compelled Mr. Nanz to look about for more extended quarters, and he finally settled at St. Matthew's station (Gilman's Point, as it was formerly known), and there he purchased thirty acres of land which he proceeded to lay out, and which now is the nursery of the firm.

The distinguishing characteristics of Mr. Nanz's life were unvarying honesty and integrity in all his transactions, and his untiring activity, which seemed to have no limit, though when he had attained his seventieth year he retired from the active conduct of his business and transferred his interests to his son, Harry Nanz, and his son-in-law, Carl Neuner. During the course of his life he planted thousands of trees in all parts of the city, in the streets and in the yards of private residences, which will remain as so many beautiful monuments to his memory.

He was laid to rest in Cave Hill Cemetery, the funeral being very largely attended.

Nephrolepis.

The nephrolepis, or "Sword Ferns" as they are sometimes called, comprise a very handsome group and also a very useful one, their long, graceful fronds mingling very happily with those of different habit.

The members of this family are of easy growth and also easy to multiply, as some of the species may be readily procured from spores, while all may be readily increased by planting out on a bench in the fern house in order to allow the rapidly growing rhizomes or creeping stems to develop. In fact some species may be planted outdoors in a shaded place during the summer with good results, both *N. exaltata* and *N. pectinata* doing well under such treatment, and the plants so grown make admirable specimens for decorative work during the following winter.

As noted above, these plants make long, wiry rhizomes which travel either

on or just beneath the surface of the soil, and on these at short intervals are produced the young plants.

Regarding temperature during the winter it may be stated that any of the nephrolepis may be grown in a house that ranges from 55° to 60°, while *N. exaltata* and *N. cordifolia* (or *N. tuberosa*) will thrive in a much lower temperature.

In cultivation there is one very essential point to be remembered, and that is never to allow any of the nephrolepis to get very dry, as the pinnae are articulated, or jointed to the midrib, and the consequence is that if allowed to become very dry they will drop much of their pinnae.

Among the finest species should be included *N. davallioides* furbans, a very strong grower and an elegant exhibition plant, or may be used with good effect in a pedestal by placing the specimen on a pedestal so that its fountain-like growth of long, graceful fronds may be displayed to advantage.

The fronds of *N. davallioides* furbans are light green and glossy and from three to five feet in length, the tip of each pinna being divided into from two to five segments or forks, this giving the fronds a crested appearance.

In order that this fern should be in condition for decorating it should be grown in a moderately light house and well ventilated, as by this means the fronds will be hard and of good substance.

Another excellent species, and one of the hardestiest is *N. exaltata*, also a strong grower, and produces long arching pinnae fronds of dark green and attaining a length of three to four feet.

This is a well known species and makes a first rate window fern, or may be used as a vase plant during the summer, providing it is not placed in the full sun, and in addition to these advantages the fronds stand well when cut, so taking all things into consideration this is one of the most useful species in the genus.

N. pectinata is of much more dwarf habit than the preceding and consequently makes a more useful small plant for table ferneries and other work of similar character.

It has slender fronds from one to two feet long and closely clothed with dark green pinnae, and as it is evergreen (as are most of this genus) and grows freely during the winter it has already proved its value as a florist's fern.

N. cordifolia, better known as *N. tuberosa* from its habit of forming small tubers on its rhizomes, is still another good species, being easy to grow and nearly as hardy as *N. exaltata*, and to which it bears some resemblance. It spreads rapidly and in common with most of the nephrolepis makes a good basket plant. It bears long stout fronds of light green and is a useful one for cutting from for large work.

N. Duffii is quite a dwarf grower and also very pretty when well grown. It is of tufted habit, the fronds being comparatively upright and dark green in color, more or less clothed with brown tomentum and the tips of the fronds several times forked or divided. This species makes a very pretty plant in either 3 or 4-inch pot and presents a very distinct appearance.

One of the latest additions to this genus is found under the somewhat unwieldy cognomen of *N. rufescens* tripinnatifida and was introduced about four or five years ago. It is unquestionably one of the loveliest of the genus, but unfortunately is nearly deciduous in the winter, this fact of course detracting from its

value for florists' use, though in a well grown specimen it is remarkably attractive during the summer and fall.

N. rufescens tripinnatifida bears large plum-like fronds that are comparatively erect in habit, dark green in color and the entire plant is more or less covered with reddish brown tomentum, the pinnae being much more divided so that they have the appearance of being crested.

There are several others catalogued in addition to the species and varieties briefly referred to above, but these comprise the cream of the genus and give variety enough for all ordinary purposes.

W. H. TAPLIN.

Long Island Notes.

BY WM. FALCONER.

CALCEOLARIAS AS HOUSE PLANTS.—The herbaceous or spotted calceolarias when in bloom are capital window plants and they keep in flower and in good health in the window for weeks, indeed, fully as long as they do in the greenhouse. But of course small or medium sized plants are better for window work than are large ones, and the window in which they are placed should not be a sunny one. Always be careful not to wet the flowers of calceolarias. Mr. Gus Bennett, of Flatbush, L. I., and who had the handsome plants at the recent New York show, tells me he uses medium sized plants for mantel decoration and not only finds them well adapted for this work but very much esteemed by the ladies.

If you grow calceolarias at all grow the finest only. Nowadays they are superb. The flowers are large, full blown and even and distinctly and beautifully marked, and among selfs we have some fine pure yellows, crimsons, browns, etc.; the striped ones that "came out" a few years ago seem to have lost favor. I never use stakes for our plants. Grow them cool and have them clean and stocky and you can have plants with dense heads of bloom two feet or more across, perfectly stiff and upright and without a stick.

THE YULAN MAGNOLIA (*M. conspicua*) was in best bloom with us about the 24th of April, and just at that time I had to supply the flowers for a large dinner party in New York. By way of experiment I sent in a couple of hundred of these Yulan magnolia blossoms and they were a great success. The flowers are very large, pure white and delightfully scented. I gathered them just before they were quite open, kept them stuck in water jars for some hours before packing and then packed them (they were still unopened) very carefully in baskets and with soft paper between them, for the least crease will stain them like a white camellia, and they got to New York in perfect condition. When used they opened wide and had a fine effect. As outdoor plants they last in bloom about a week. I am not prepared to say that it would pay the grower to send these flowers to the city florist to sell again, for they are too delicate and easily stained to stand much handling, indeed, I don't think it would. But isn't there a use for this handsome magnolia as a pot plant for Easter? It grows vigorously, is perfectly hardy and free blooming and not very expensive.

MAGNOLIA STELLATA is a small very bushy shrub with elegant, white, graceful, fragrant blossoms that appear a day or two before those of the Yulan magnolia. Without any exception it is the

VIEW IN THE CONSERVATORY, FAIRMOUNT PARK, PHILADELPHIA

loveliest of all hardy plants of its season, and its blossoms when cut are very grateful and beautiful and without any of the stiffness of other magnolias. The smallest plants bear blossoms, but it is only when the plants get to a size of two to three feet that their great beauty becomes so striking.

THE JAPANESE BLUE DAPHNE (*D. Genkwa*) is just now (April 30) the most striking shrub in our collection. It is a little bushy shrub, two to three feet high, but wider spreading with age, and is now completely covered with showy violet-blue, slightly fragrant blossoms, which appear a week or two before the leaves. Now this is a plant that every florist doing a plant trade can handle to good advantage, and you can take it up as a novelty and boom it with all your might, satisfied that you not only are handling a sterling desideratum but that the thanks of the community are due to you for bringing prominently to their notice so good a plant. True, it has been upon the market for several years, but if you have never seen it and you don't know anything about it ask yourself why? And your own answer is the peoples' answer—because no one ever brought it forcibly to your notice. It is perfectly hardy and little plants only a foot high bloom nicely. It never gets unwieldy like a philadelphus or lilac, but is just

such a plant as there is a continuous demand for for small city lots. Just think of it. If you had a lot of these blue daphnes in full bloom out of doors in your place just now, when every amateur is busy fixing up his garden and sowing and planting, do you think any one of these amateurs with a spare dollar in his pocket could visit your place and go home without one of these blue daphnes? I do not believe he could. And to make sure of the life of the plant in bloom you could have a lot of them growing in pots and plunged out of doors; transplanting from the pots even when the plants are in full flower wouldn't hurt the plants a whit.

A Rare Cypripedium.

Mr. Edward V. Low, of the firm of Messrs. Hugh Low & Co., the orchid specialists and general horticulturists, of London, sailed from New York Saturday, taking with him a plant of the rare *Cypripedium Lawrenceanum* Hyeann.

It was discovered a few weeks ago among a lot of the type—namely, *Cyp. Lawrenceanum*, which the Messrs. Low sold to Edwin Lonsdale some two years ago. This is a lucky find for Mr. Lonsdale, and he is to be congratulated in consequence.

The price paid we are assured was sat-

isfactory and more than equivalent to having the balance of 499 plants *gratis*.

Mr. Low's stay in America was shortened owing to a serious attack of La Grippe which overcame him in New York. As soon as well enough to take the ocean voyage his physicians advised him to return home, instead of taking his accustomed trip westward and to other points.

Mr. John Thorpe has been appointed the representative of the firm of Messrs. Hugh Low & Co. to look after its interests in this country, which we feel sure will prove to be a satisfactory arrangement to all concerned.

MR. T. H. SPAULDING is reported to have purchased from W. K. Harris the entire stock of *Chrysanthemum* Miss Eva Hoyt for \$250.

IF YOU LIKE the AMERICAN FLORIST give it your fullest support by confining your orders to those who advertise in its columns and mention the paper when ordering.

HON. S. M. EMBRY, president of the American Nurserymen's Association is sojourning at Great Falls, Montana.

YOU WILL benefit the FLORIST by mentioning it every time you write one of our advertisers.

News Notes.

LOS ANGELES, CAL.—At the last meeting of the Southern California Horticultural Society Mr. J. C. Harvey read a valuable paper on new and rare plants.

PROVIDENCE, R. I.—F. A. Fairbrother has leased his Eddy street greenhouses to Messrs. Loeffler & Leonhardt and will hereafter conduct the Chestnut street establishment only.

SPRINGFIELD, MASS.—The Hampden County Horticultural Society recently distributed young chrysanthemum plants to 1,100 school children between the ages of 8 to 16 years. For the raising and care of the plants prizes will be awarded at the society's annual chrysanthemum show, November 11 to 13.

LONDON, ONT.—The Forest City Florists and Gardeners' Society will give its second annual chrysanthemum exhibition about the second week in November. The exact date and place of exhibition will be announced later. The premium list has been printed and copies may be had on application to Wm. Gammage, secretary, London, Ont.

SYRACUSE, N. Y.—L. E. Marquette has just completed his new house 113x13, and will soon build a show house 50x25. He thinks he shall stop then. Certainly he has as compact and well arranged a set of greenhouses as can be found in this part of the state. H. Morris, the Elmwood Park florist, is just completing three more houses ranging from 60 to 100 feet long by 14 and 20 feet wide. He also has a water tower 40 feet high and as there is a beautiful never failing stream running through his place he is quite independent of water companies.

When you write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED.—Competent florist and gardener open for engagement by the 15th of May. Neighborhood of Chicago preferred. Address Wm. K., care American Florist, Chicago.

SITUATION WANTED.—Meeting with reverses in business, I would like the management of a cut flower establishment out of town for the summer months, or longer if satisfactory to both. Address FLOREST, 322 West 27th Street, N. Y.

SITUATION WANTED.—By single man of good experience in florist business, as well as vegetable growing and landscape gardening. Place with Lutheran church preferred. Address JOHN HORTWASS, 331 Clermont Ave., Brooklyn, New York.

WANTED.—To correspond with a party who thoroughly understands bulb growing, and would come to Bermuda. Address GEO. W. WEST, Shelly Bay, Bermuda.

WANTED.—An experienced rose grower to assist in large establishment. Answer stating wages expected. A single man preferred. Address B. care American Florist, Chicago.

WANTED.—A single man to do greenhouse work, must understand the business; commercial place. Will board man. State wages wanted. TILDE, NOBLE, Jr., Green Bay, Wis.

WANTED, TO LEASE.—A place in the East, two to five thousand feet of glass; good paying business; possession in 10 days. Will pay terms. C. care American Florist, Chicago.

WANTED.—Two thoroughly competent general plantmen; must have best of references. Young man desired. State wages wanted. Apply to CURRIE BROS., Milwaukee, Wis.

WANTED.—A young florist, good general greenhouse worker with a taste for decorations and making up, also a well recommended man. Supplying send references and mention wages expected. JOHN RECK, Bridgeport, Conn.

WANTED.—First class man to take charge of greenhouses, including the forcing of roses, carnations and bulbs for winter flowering; must be a first class grower. Salary and board around \$100 and wages required. Must be single, as I will board him. ISIDORA, care American Florist, Chicago.

WANTED.—At once a first class rose plant and cut flower grower, one who thoroughly understands the same, must be sober and industrious; state experience, references and wages expected; also a good practical second man. WM. A. ROCK, 331 North Ave., No. Cambridge, Mass.

FOR SALE.—Bellape Windmill, 12-foot wheel, in good order, 2,000 gallon tank, fittings and all complete. Also force pump in fairly good order. Will sell all cheap for cash. Address J. A. CONGRESS STREET, Portland, Maine.

FOR SALE.—\$200 cash takes well established first place consisting of two large houses, stock tools, wagons and horses; 140 feet of ground, in good retail locality in Chicago—ground alone worth the money. Address N. W., care American Florist.

YOU ROSES.

Having more than doubled the producing capacity of our Rose houses during the past two years, we are able this season to offer to the trade a very fine lot of young Roses. The varieties are principally hardy and well tested. HYBRID PERPETUALS, such as we grow in large quantities for our own planting. The plants were propagated this winter and are now in 2½ inch pots and in the best possible condition either for planting in the open ground or for shifting. Our list comprises the following good varieties and others, viz:

Alba Carnea,
Admiral Lapeyrouse,
Alex. Bachmettie,
Achille Goudot,
Annie de Diesbach,
Antoine Mouton,
Baron de Bonstetten,
Baron Maynard,
Bertha Baron,
Baltimore Belle,

PRICES OF ADMISSION TO EXHIBITIONS.

What shall be the price of admission to our exhibition? is a question that is being asked by quite a number. This is a matter of very considerable importance and conclusions should not be jumped at. We would like to have a discussion upon this matter and will here state our own views for the consideration and criticism of our readers. We believe in a low admission price—and consider 25 cents about right. Why? In the first place

the exhibition is given for the purpose of educating the people to an appreciation of the plants and flowers that are exhibited.

This can not be accomplished unless the people attend the exhibition, and the more that do attend the larger the influence exerted. And certainly more will attend at a low admission price than at a high one. Again we believe that in the majority of cases the paid admissions at 25 cents will be more than double those at 50 cents, and thus there is a financial benefit in the lower price as well as an opportunity to accomplish more good in the way of an increased interest in plants and flowers.

These statements are based upon the assumption that the show is a good one, arranged to appeal to the people rather than to the professional alone, has been properly advertised and the hall where the exhibition is held is of sufficient size to hold a crowd comfortably.

Human nature is much the same everywhere, and people who do not move a quarter are apt to halt when the cost is half a dollar or more, and they will spend a quarter for each of two items much more readily than double that amount for one item. Change positions with the public and see if you would not be affected in about the same way? Again if the price is "only a quarter" people feel better able to "drop in again to-morrow" and if particularly pleased with some special feature will bring one or more of their friends to see it. If the price were higher they would be inclined to forego the pleasure of thus treating their friends. And the people who want to "run in just for a few minutes" will spend a quarter readily for the privilege while double the amount would keep them out.

We would like to have the views of others on this subject.

A FORM of competition in the arrangement of flowers, suggested for the fall exhibition of the Horticultural Society of Chicago by Mr. F. F. Bentley, a florist of that city, seems so desirable that we offer it for general consideration. The proposal is to offer a liberal prize for best arranged basket, each competitor to be supplied with a basket, all of uniform size and shape, and also with a stated number of flowers of medium quality, the same number and quality of flowers and quantity of foliage to be given to each one. The competitors to them fill the baskets and submit them to the judges for decision. All or only a part of the material supplied to be used in the discretion of each one. This sort of a competition would bring the decision of the judges to bear directly upon the question of arrangement and would prove a mighty interesting contest. Competitions in other arrangements could be conducted upon the same plan. Skill in arrangement is shown by the creation of the best effect with the material at disposal and competitions in floral arrangements should be as purely tests of skill as possible.

REGARDING the specimen exhibition advertisements which we printed in last issue we should at the time have called attention to the points considered in building up the advs. First in importance was the display line "Flower Show." This tells the main part of the story. In the first adv. "Now open" was considered next in importance, to sharply define the end of the advance notices. Third came the fact that it was given by an organization that had twice before made such an

exhibition. Thus the prestige of the former exhibitions was secured for this one. Fourth the price of admission. This should be given prominently and in every adv., particularly if the price is low as in this instance. Fifth the hours the exhibition was open daily. Never omit this. Flower shows are necessarily of short duration and the public should be made acquainted with the necessity of coming at once, hence the line "will close Friday evening."

WOULD IT not be well for the Society of American Florists to print in each of its annual reports a list of the Florists' Clubs in America at date, with name and address of the secretaries? Such a record would seem to properly belong in the report, for the clubs are in a measure children of the society. Fuller statistics regarding the various clubs, such as date of organization, number of members at date, frequency of meetings, etc., would be still more desirable. Would it not also be an excellent plan for the secretary of the S. A. F. to keep on file copies of the constitution and by-laws, premium lists and other printed material of the various clubs. Such would undoubtedly be sent him on request and the collection would not only be of considerable historical value in time, but would often be very useful for reference. The national society would seem to be the proper medium for their collection and preservation.

THE NAME of Mr. Walter Maxwell for chief of the Bureau of Horticulture of the World's Columbian Exposition was sent to the Board of Control by Director Gen. Davis, on Thursday last, April 30. It is thought that the appointment will be confirmed although there has been considerable opposition. Mr. Maxwell, as we hear, is hardly a horticulturist, even in the California sense, and much less one who is familiar with the florist, nursery and seed trade east of the Rocky Mountains. It is such an appointment as the friends of horticulture have feared from the first. We can only hope that Mr. Maxwell will not in this high position lack the patriotism and generosity to make a wise choice of his assistants and advisers.

COMPLAINT that some of the pots sold as "standard pots" do not conform to the standard adopted by the Society of American Florists, has reached us. To prevent such a condition of affairs and to protect the trade as well as the makers of the genuine standard pots would it not be in order for the society to ask manufacturers to submit to its committee samples of the pots they purpose selling as standards, and if the pots meet the requirements authorize the secretary of the society to issue a certificate to them which may be used in their advertisements and price lists? It would seem that some such step is necessary to secure the uniformity in size which the standard was designed to bring about.

MR. WM. FALCONER sends us three calceolaria blooms, all of which when pressed flat are over two inches across, the largest two and three-eighths inches. One is the best pure yellow we have ever seen. Mr. Falconer says his calceolarias this year are finer than ever before.

YOU CAN give the AMERICAN FLORIST your fullest support by conning your orders to those who advertise in its columns, and when ordering mentioning the fact that you were induced to order by the adv. in the FLORIST.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN PORTER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

Non-Warranty of Seeds.

W. G. in the *Farm, Stock and Home*, of Springfield, Mass., writes as follows on the above subject:

Purchasers of field or garden seeds need have no fears that they are not warranted notwithstanding when they arrive they find pasted across the package a notice of non-warranty, as some dealers do. The sale of the seed and the transfer of ownership occurred the moment the dealer received his stipulated price for them, and any conditions he may attach to them unknown to the purchaser at the time of payment are void. The conditions on the invoice received after the contract was made have no modifying power on the contract itself. The law says the purchaser has his remedy if he does not get what he paid for; and where he buys seeds there is an implied warranty that such seeds are true to name, and will grow if given proper conditions. It will be asked: Then why do some seed dealers attach a notice of non-warranty? There are many careless people who might plant so ill that the best seeds would not grow or mature. Should the purchaser amount to a considerable sum they might seek redress from the seller. It is to deter such from trying to recover that the non-warranty notice is used; it is simply a "scare" expedient. It may be all right in itself, but as a point of law it is not worth the paper upon which it is printed.

We have seldom found so few grains of truth contained in so much chaff as in the above article. W. G. says: "Purchasers need have no fears that the seeds are not warranted notwithstanding a notice of non-warranty may be pasted across the package." Also "Any conditions attached to them unknown to the purchaser at the time of payment are void."

Now what are the facts in ninety-nine cases out of every hundred? Nearly every seed firm in America and all belonging to the "American Seed Trade Association" print on the first pages of their catalogues the non-warranty conditions similar to one of these:

"While we exercise the greatest care to have all seeds pure and reliable we do not give any warranty express or implied. If the purchaser does not accept the seeds on these terms and conditions they must be returned at once, and the money that has been paid for same will be refunded."

"We test all seeds before sending them out, but in case they fail to grow when tested by purchaser we will replace them or give value in others, but cannot in any manner warrant the crop or be responsible for other failures."

Again, the same conditions are usually printed on the heading of the catalogue order blanks. Now what seed buyer ordering from catalogue by mail could fairly claim such conditions to be unknown to him as a buyer? One other condition of the sale of seeds exists, the transfer of ownership over the seed counter. Could W. G. when buying 5 cents worth of turnip seed at the seedsman's retail counter deny that he understood the non-warranty conditions if the same were printed on the bag which he received in exchange for his nickel? And if he did know these conditions what just claim has he on the seller?

ROCHESTER, APRIL 28, 1891.—Mr. F. Benary of Erfurt was given a complimentary supper here last evening by the seeds-men of Rochester and vicinity.

CHARLESTON, S. C.—The recent floral fair was visited by over 3,000 people.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

SYRACUSE, N. Y.—The members of the Central New York Horticultural Society are to be congratulated on the success of their first annual spring show, which was larger and better than the most sanguine expected. Messrs. P. R. Quinlan & Co. did much to add to the success, for they spared neither time nor expense in making their exhibit worthy of the firm. Nearly all the other florists were represented. Mr. Peter Kay, gardener to Hon. J. J. Belden, had a fine display of foliage and flowering plants, as did also Mr. G. Ham, gardener at the State Hotel Asylum. Mr. McNeelley, gardener to Hamilton S. White Esq., showed a nice collection of plants, among which were some fine seedling carnations, one especially resembling in color and make up a La France rose and which was awarded a first prize for a plant of merit. Among the amateurs Mr. J. Huller staged a very nice collection of bulbs in flower and some fine pansies. Mr. Thos. Durston exhibited a pretty group of palms and begonias. The awards of prizes were given last week. Mr. W. Mathews and Mr. H. Baker of Utica and Mr. J. Morgan of Auburn acted as judges and of course gave universal satisfaction. Too much praise cannot be given to the president, Mr. A. D. Perry, who is always to be found ready with means and muscle to help the society.

W. T. STEPHENSON, Petersburg, Ill.

Position of Rose House.

In reply to the query that appeared under the above heading on page 703 I will say that in my experience, where ground will permit, a house running north and south is the most desirable for all seasons of the year, and a southeast exposure is preferable. The morning sun is much preferable to that of the afternoon. The hill southern exposure of an east and west house is very hard on plants and flowers at some seasons of the year, giving the midday sun full sway while the north and south house gives the morning sun and at noon presents the ridge to its rays, thus helping to keep the house cool.

Cut Worms.

In the AMERICAN FLORIST of April 16 is a communication from Chas. F. Baker describing the variegated cut worm, of which I sent him some specimens.

I wish to correct a mistake in his article. The article makes me say that I dug a quart of worms from about the roots of one smilax plant. I dug them from a smilax bed about 3 by 10 feet.

I see that Mr. May describes the same worm and gives us a method for trapping the moths, to place boards loosely together for them to hide among.

I have found another way to destroy them which I find quite effective. We smoke out the houses occasionally to kill greenfly, and if we find any moths after smoking they are quite sure to be dead moths.

Mr. May also says that if a batch of the eggs should happen to get into the soil of the rose bed in the fall or early winter the worms would make short work of the young roses. I have had them in my rose and carnation beds all winter. My experience is that they do not eat the foliage of either, but they eat holes in the buds, and if let alone would destroy more than half of them.

If the surface of the rose and carnation beds are carefully scraped over once in ten days and the worms killed the damage will be slight. A. B. HATHAWAY.

New Bedford, Mass.

Moles and Mice.

In answer to subscriber, page 684, in regard to moles and mice in cold frame, plant some castor oil seed, or in other words parmacristal seed. They will do for moles. As to mice I can't say. I have some of the seeds, subscriber is welcome to some if he will write for them.

Nashville, Tenn. ECKHARDT & Co.

L. Harrisii Again.

I had a Harrisii for Easter with 15 fine blossoms on a stem a little over five feet high. This beats Mr. Ackley's in number of blossoms if not in length of stem. How is that for this cold climate of Canada?

MADISON SQUARE GARDENS, NEW YORK CITY,

NOVEMBER 2 TO 8, 1891.

\$6,500 in Premiums.

This will be the greatest exhibition ever attempted in America. See preliminary schedule.

This will be a surprise to all who have ever had an idea of what New York can and will do.

There will be seed stores and flower stores from all cities between Boston and Chicago.

There will be full sized—120 x 20 feet—greenhouses, with heating apparatus complete. There will be all kinds of tools and appliances. There will be all the novelties, mechanical and otherwise, and the preliminary schedule of \$6,500 is only a part of the premium list. It is safe to say that \$2,000 will be given in silver cups.

Just Published.
NEW BOOK ON MUSHROOMS.

By WM. FALCONER.

Florists will hail this publication as a boon—there having been no exhaustive treatise specially applicable to their wants heretofore. Having made special arrangements with the publishers of this valuable work we are enabled to offer it at the reduced price of **\$1.35 per copy** post free to any address in the United States or Canada. We have still a few hundred copies of Mr. Robinson's work on "MUSHROOM CULTURE" left; 50 cents per copy postpaid. Our own little book "MUSHROOMS FOR THE MILLION", 16 pages, you can have free for the asking. Book your orders now for Gardiner's Imported Mushroom Spawn for August delivery—the first of next season's consignments arrives then.

We are also offering at present at remarkable values on White Romans, Von Sions, Harrisii, etc. for August delivery. Send for our prices before buying elsewhere. Harrisii grown from our stock the past season were acknowledged to be the "finest ever exhibited in Philadelphia." Don't fool with poor stock. Our Fancy strain of Chinese Primrose should interest you about this time. \$3.50 per 1000 seeds; 50 cts. per 100. A full line of all kinds of Choice Flower Seeds specially selected for florists' use. Write us when in want.

CONCERNING

Propagation of Plants.

A COMPLETE HAND-BOOK OF PROPAGATION AND POLLINATION.

THE NURSERY BOOK has been prepared with the utmost pains. It embodies the experiences of many experts. The author, Prof. L. H. Bailey, editor of *The American Garden*, has been engaged in its preparation for many months, and has visited many nurseries and specialists, gathering material upon technical points outside of his practice. The whole volume has been read and criticised by Prof. B. M. Watson, of the Bussey Institution, one of the best propagators in this country. All available authorities have been consulted, and particular parts have been submitted to experts. The fruit matter has had the criticism of leading nurserymen, and the head propagator of probably the most important nursery in America has been freely consulted. The Orchid matter has been prepared by W. J. Bean, of the Kew Royal Gardens. The instructions in the nursery list, which gives the definite methods for each plant, have been read by at least four persons. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology; nor with any abstruse reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The nearly 100 illustrations are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, forest trees.

CONTENTS.

CHAPTER I—SEEDING. CHAPTER II—LAYERAGE. CHAPTER III—SEPARATION. CHAPTER IV—CUTTING. CHAPTER V—GRAFTAGE. Including Grafting, Budding, Inarching, etc.

CHAPTER VI—NURSERY LIST. This is the great feature of the book. It is an alphabetical list of over 2,000 varieties, with a short statement telling which of the operations described in the first five chapters are employed in propagating them. The following entries will give an idea of the method.

ACER (MAPLE). Sapindaceae. Stocks are grown from stratified seeds, which should be sown an inch or two deep; or some species, as *A. dasycarpum*, come readily if seeds are simply sown as soon as ripe. Some cultural varieties are layered, but better plants are obtained by grafting. Varieties of native species are very numerous and are all well stocked. The Japanese sorts are inter-worked upon imported *A. polymorphum* stocks either by whip or veneer-grafting. Maples can also be budded in summer, and they grow readily from cuttings of both ripe and soft wood.

PHYLLOCACTUS, PHYLOCREUS, DISCOCACTUS (CACTI). Cactaceae. These plants bear seeds grow readily sown in rather sandy soil, which is well drained and apply water as for common seeds. When the seedlings appear, remove to a light position. Cuttings from mature shoots, three to six inches in length, root readily in sharp sand. Give a temperature of about 60 degrees, and apply only sufficient water to keep from flagging. If the cuttings are very juicy, they may be laid on dry sand for several days before planting.

GOOSEBERRY RIB. These only the raising of new varieties, should be sown as soon as well cured, in January or sandy soil, they may be sown stratified and sown together with the sand in the spring. Cuttings six to eight inches in length, root readily. Inserted two-thirds their length, usually grow readily, especially if taken in August or September and stored during winter. Stronger plants are usually obtained by layers, and the English varieties are nearly always layered in this country. Ground-layering is usually employed the English varieties being allowed to remain in layerage two years, but the American varieties only one (p. 27). Layered plants are usually set in nursery rows for a year after removal from the nursery. In the spring during summer is sometimes practised for new or rare varieties.

CHAPTER VII—POLLINATION.

Price, library style, cloth, wide margins, \$1; Pocket style, paper, narrow margins, 50 cts.

A Spring Perennial.

Polyxena Maia Mithua, child of parents well to do.

Married Mopsidos of Athens, B. C. 342. And they took a neat suburban villa by the sounding sea.

Where they subsequently raised an interesting family.

There would Polyxena linger, when her husband, every day.

Sought his flourishing helmet business, on the Apollonian Way.

There would Polyxena linger, looking somewhat sadly out.

On the bare and clayey courtyard, where the brass reliefs were.

On the bare white marble benches, on the vases holding up.

One on either side the portal, a provoking empty cup.

Till she longed for leaves and blossoms—as most women think they long.

Till they get the job of watering—with a passion pure and strong.

There, one day there came a peddler from Phoenicia's distant land.

With a large vocabulary and a manner firm, yet bland.

In his hand a bulb he carried, sleek and shiny, pale of hue.

Called, he said, the Mithridatic sempiternal phylloxera.

Better known in common parlance as the Front-Yard's Peerless Pride:

And he thus described its glories (Polyxena looked and sighed):

"This extremely hardy annual is a plant of sweet smell.

And it frequently attains a height of 47 feet; Blooms profusely all the summer, bearing flowers of startling size.

Pink and blue and white and purple, dotted o'er with peacocks' eyes.

Changing into fruit whose flavor can remotely be described.

By the statement that they beat the nectar that the gods imbibe.

In the fall, the bulbs dividing, so increase and multiply.

As I hope you—' here she checked him—' may observe before you die.

To export this plant is treason by Phoenicia's stern decree,

I escaped with half a dozen—you may buy the last of me.

No one else can get another—Anatolia next door offered twenty drachmas for it—it is yours for twenty-four."

Polyxena bought the treasure from her small domestic store.

And the peddler then departed. He will reappear no more.

Polyxena nursed her treasure with a woman's tender care.

Watered, weeded, fertilized it, watching for its flowering fair.

Leaves appeared, tall, graceful, slender—Polyxena glowed with pride—

And it lingered till the autumn, then it gently drooped and died.

Then came Mopsidos the scoffer, and exhumed the plant with glee—

All along he'd been as nasty as a man can sometimes be—

Raised it to his Grecian nostrils—bit it—looked one moment wise.

Then he said, "It is an onion." Tears bedimmed two pairs of eyes.

This was years ago Attica, many, many, many, many years ago.

Earth has long assimilated all who played this play of woe.

To-day where'er the gay suburban brings his youthful wife—

As a temporary measure—then to settle down for life—

On the rolling hills of Jersey, on Westchester's fertile plains,

Where the light mosquito buzzes, where Malaria vibrates, reigns,

At Josephus-on-the-Hudson, at Bohunkus-by-the-sea.

Annually is enacted this distressing tragedy—And as long as women are women, peddlers, peddlers, it will be.

—Puck.

HALES' MOLE TRAP

For destroying ground moles in lawns, parks, gardens and cemeteries. The only PERFECT mole trap in existence. Guaranteed to catch moles where all other traps fail. THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL INSECTIGIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes—Half-a-Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-Pint of the Fir-Tree Oil to two or four gallons of water, or two or three table-spoonsful to the pint.

For Red Spider and Caterpillar—Half-a-Pint of the Fir-Tree Oil to two gallons of water, or three table-spoonsful to the pint.

For Mealy Bug, Brown or White Scale—Half-a-Pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoonsful to the pint.

For Copper and Blight on Fruit or Foliage—Half-a-Pint of the Fir-Tree Oil to a gallon of water, or six table-spoonsful to the pint.

Use with warm water. It is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied in Wood, Tin or Pot Vessels.—Galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ringworm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water. This may be repeated. If necessary a much weaker solution may be used with a spray producer.

Sold in Bottles and Tins.

Manufacturer—E. GRIFFITHS HUGHES, MANCHESTER, ENGLAND.

SOLD BY ALL SEEDSMEN.

THE TORONTO CLUB has given up the idea of holding a horticultural exhibition at the time of the convention of the Society of American Florists in that city next August.

THE CENSUS bulletin shows that there are \$40,000,000 invested in greenhouses and appendances thereto in the United States. Add to this another \$10,000,000 for Canada and we have a total of \$50,000,000, in round figures, invested in the trade in America.

What One Amateur has Done.

[We publish below a letter received by Mr. John Thorpe from Mr. F. T. McFadden, the well known amateur of Cincinnati, whose beautiful place "Rosebank" is now justly celebrated. Mr. Thorpe writes that he would feel guilty were he to withhold from the readers of the FLORIST the privilege of sharing with him the pleasure of a perusal of the letter and has sent it to us for publication.]

February 11th, 1891.

DEAR MR. THORPE:—It was my plan to have been in New York long before this date, but I am still in the west. I have been building and improving facilities, growing things, and all that. I received your letter long ago and expected to have been with you to talk it out before this, and while I have been greatly pleased, in being permitted to stay and finish what I began, I have frequently wished I could be with you to discuss and settle some plant problems which proved too deep for my individual resources.

The Establishment (you will note I spell the word with a big E) out here, has taken on proportions not to speak of attractions, little expected at the outset of my venture. I feel you may be interested in knowing something of the winter garden as at present completed. You may remember our glass is located on terraces and faces the "winter sun," down a somewhat precipitous hillside. The lowest house of all I know you will be interested in, it is full of chrysanthemum "stock plants" and it is just here I want your advice: what of the novelties of 1890-91? I come to you for this information, for I know you to be "the unspeakable Turk," always foraging for now beauties. What new faces and graces do you propose to introduce and how many of my old sweethearts are to be supplanted. I warn you if the debutants be not an "iridescent dream" every one of them, keep them at home. I would like to look at the "buds" anyhow, there is no harm in that, so send them along.

But I was telling you about our houses and the principal ornament of the lower terrace is the palm house; as I looked at it this afternoon it seemed a veritable tropical jungle, with braheas, kentias, arecas, cocos, latanias, phenicophoriums, rhaps, typhospermas, seaforthias, etc., growing in luxuriant profusion with bright dracaenas, with musas in fruit and stately specimen Pandanus Veitchii in relief, with crotons in warmest colors everywhere with zamias and cycas, conspicuous in form and tints, amid the fleecy fronds of cibotiums and asplodias, with the lovely leaves of nodding alcaecias contrasting with the scarlet blooms of Anthurium Andreanum, with marantas reveling in the moisture below and hundreds of cattleyas and dendrobies in bud and flower suspended from the rafters above.

all conspired to produce the impression I received.

Terraces 2 and 3 above the palm house are the locations of the houses where we grew the chrysanthemums, which you may remember won for us the laurels we coveted at Indianapolis in '89 and Cincinnati in '90; those two structures are now filled with hybrids in boxes, a forest of buds and fine foliage. The 4th terrace is the site of our main house of hybrids; this house is cut in two by a glass partition; we took a crop from the half part of this structure for the holidays and knocked the growers in this section silly with our success in this somewhat difficult undertaking; the other half of the house is now in full bloom with "Magnas" and "Brunners," every rose an ideal rose and the foliage simply perfection. Boxes have been carried in where the Christmas hybrids grew, and so we grind them out.

On the 5th terrace stands the odontoglossum house, a long narrow refrigerator expressly constructed for these "snow line" orchids. O. Alexandrae are in bloom on the benches, dripping wet from the spray thrown from pipes arranged to supply this necessary moisture and the high back stone wall and the rafters display these plants everywhere, some making growth, some ripening, others breaking into bud and others again in full flower. Fancy the charm of this corridor in April and May when the long double line of O. citrosium, now ripening high overhead, shall send down myriads of clustering white butterflies, seemingly to sip the nectar from the peerless crispums, poised expectant below and waiting for the embrace. "If Solomon in all his glory was not arrayed like a lily of the field the angels of heaven have no vesture more ethereal than the flower of the orchid." But to take breath and come down from the realms of the angels to plain everyday "American Beauties."

The next level, No. 6, is the "Beauty" house terrace. This structure was built from plans furnished me by J. N. May and is a model in every way. Our Beauties grown here have been the finest ever seen in this corner of the country.

Terrace 8 is the site of the propagating house which is partitioned to secure two temperatures, a hot and a cold end; in the tropical half I wish I could show you a batch of Adiantum Farleyense, embracing about 100 plants, which is the most delightful of the tropical exhibits. In the cold half of the house the sand is full of rose cuttings. Late on the roses and other pebeians and parvums of the tribe of Flora will make way here for her chrysanthemum majesty whom we shall receive with true devotion of loyal subjects which we are. Terraces Nos. 9 and 10 are the sites of two more of Brother May's model "glass houses;" in

one of those we grow the divine "Mermet," whose lustrous shell-like coil it would seem had grown not in earth, but "Inguis enchanted, where the sire sings and coral reefs lie bare, where the cold sea maids rise to sun their streaming hair." The other of these is the house of "Brides," and I assure you our Brides are as "chaste as ice" and lovely beyond the power of words to picture their purity and perfections.

On terrace 11 is located a new house built over the vine border; at this particular date this particular house is the most gorgeous spectacle of the place. It is filled with cyclamens; there are 800 plants in the structure, with an average of twenty open flowers upon each plant (a great number carrying between 40 and 50 blooms) perfect in form, immense in size and dazzling beyond description in general effect. The foliage alone is a joy forever, and these 16,000 flowers, a sight one does not often see or soon forget. It is my opinion the cyclamen offers for the purposes of room decoration and as a window flowering plant, the most remarkable and lasting qualities possible to obtain. The windows of our residence have been full of them nearly all winter; not a plant has been changed since they were first brought in, yet they bloom profusely, the leaves retain that deep, rich, lively, green variegation, and they seem to grow better rather than worse, the longer we keep them amid these unnatural surroundings. I take it they will collapse some fine day, all of a heap, but the pleasure we have already received from these bright banks in our rooms, when all was snow and ice outside, has been worth a hundred fold their cost and trouble of production.

As you will no doubt want to know how our grapes are doing, I will say we started the one lone viney we have here on the first of the present month; the wood is fine and perfectly ripened, at conditions favorable and the house of ample proportions, so we expect Hamburgs, Colemans and Muscats in generous quantity from July on for six months. We hope to discuss their merits with you if you will give us the pleasure of that, promised visit next summer which you must not forget.

Terrace 12 brings us to my hobby of hobbies, it is the cypripedium house, a span structure which holds many noble specimens and embraces more than 100 species and hybrids (not to mention varieties) in the collection of some 1,200 slippers. These are only the cypripedes we grow in East India heat, the intermediate and cold sorts are in other houses. I feel I could write a book about these pets, but to be brief I counted this afternoon no less than forty species, hybrids and varieties of these in bloom and among them a plant of *albo-purpureum* in a 14-inch pot, two feet high and a yard across, with five spikes and thirteen open flowers. John Rose says he has made some figures about the value of these plants and he estimates the contents of the house, on the basis of Low's and Veitch's prices, at \$12,000. I say leave me a nice little healthy plant of each and take the lot for half the money. On this level also in addition to the cypripedium house is our glass-roofed "show room." We try to keep this particularly tidy and cold and dry for the temporary reception of plants in bloom.

The show house is filled now with *Cattleya Triane*, *Oncidium splendens* and *dendrobiums*. On this terrace also is the cattleya house, a high wide span about 85 feet long; the center bench of this

house is provided with steps built up open rails upon which the plants in pots stand while up next the glass hang the baskets as close as they will fit. The capacity of this house is about 2,000 plants (many specimens among them) and fully seven or eight hundred flowers will be doing their prettiest in the exhibition line in this house during the present month. Across a passage from the cattleya house is an L shaped lean-to with a south and east exposure; there is a high back wall, against which open rail steps have been built, extending from the walk to the top of the wall, here we grow our vandas, and here a little earlier in the season *V. cœrulea* to the number of several hundred plants were in bloom and worth a pilgrimage to look at. I feel you will agree with me that *Vanda cœrulea* meets a craving of the cultured soul, which nothing else satisfies. What is finer? Is it *Calceolaria amabilis* or is it *Odontoglossum crispum*? The open rail steps permit the great aerial roots to wander at pleasure and our vandas give evidence of the quarters being congenial to them. On the front benches of the lean-to we grow *O. vexillarium*, *O. phalenopsis*, some of the *cymbidiums*, *zygotetals*, *miltonias*, some of the *oncidiums* and suspended from the sash bars of this house, as is the case in all the orchid houses, lines of baskets, baskets and foliage and twisting epiphytal roots and flowers everywhere.

At the top of the hillside stands the "stove." Our stove has recently undergone reconstruction, and we consider it now a model in point of beauty, in proportions, cleanliness and the many devices employed for high beds, moisture, ventilation, etc. You should see in this structure the *phalenopsis* hooks and the two hundred and more pieces in the art of domesticating these capricious plants, which hang thereto. Those hooks are as sacred to these freakish customers as that on which Horace suspended his Lyre. You should see the roots that are 'browed down over the bed of coke and charcoal placed beneath the slats on which the plants grow, as one of the things to see before you die.

You should see those *phalenopsis* flowers and you will conclude there is no use in dying and going in for a better world than this mundane sphere which produces such things. I don't know anything about the other, but there is certainly nothing to equal or approach these tints, graces, dainty waves and all beauty that the mind can hold, in this lower world. Here are also in this house our arides in some twenty species; angraecum, a dozen species, *calanthes*, *scacelabiums* and the usual stove plants.

Our houses here are as a rule "three quarter spans," and built and located as they are, each house a few feet lower than that which precedes it, no shade is cast; we get all the light and sun heat possible to supplement the artificial article and as they stand east and west, facing the south, they are comfortably situated for winter work. Along the east ends runs a range of flat built structures, roomy, warm, well lighted and ventilated for potting purposes, etc. Here is the office, packing room (with cold cellar below for cut flowers); here are also the men's quarters piled for heat in winter and supplied with hot and cold water and every convenience. On the west of the "glass" is a wide passageway, also affording covered communication with all the houses; this covered way can be thrown open in summer and in winter closed from the elements, yet well lighted and dry. The es-

tablishment is heated with Hitching's wrought iron boilers, 2-inch wrought pipes being used throughout. The heating system is hot water under pressure, the pressure at the boilers being about 45 pounds. The area of glass is twenty-six thousand feet. Two steam pumps and a wind engine supply water to the tanks, pumped from cisterns, of which we have a generous supply and from a never failing spring. Rain water is exclusively used for our orchids.

I write you all this because you do not laugh at me and enquire why I have not been content to do a little instead of so much, as many of my friends do, in view of my motives and inspirations in this enterprise being purely those of the amateur. I usually make no reply to these questions, but I will tell you, I wanted to do what I undertook thoroughly and well and my pursuit of the botanical will-o'-the-wisp has given me the greatest personal pleasure in life.

Faithfully yours, F. T. McFADDEN.

Those Drawing Rooms.

The illustrations very faithfully portray the two rooms and it is with a great deal of pleasure I discuss them. It is a notorious fact that in nearly all floral decorations of whatever kind the object seems to be to crowd and crowd and crowd as much material as possible into the very smallest space and how often with disastrous result! Does it not ever occur to decorators that it is art and not material that makes decorators? On the Angelus picture there is probably not a pound and a half of paint. How many hundred tons of paint could be bought—if paint made the picture—with the money the Angelus would bring at public sale.

Returning now to the drawing room decorations Mr. A. Warendorf was awarded first and Mr. G. Stumpff second. The awards were made by a committee of ladies. A protest was entered and the awards were reviewed and confirmed by a committee of gentlemen, Messrs. G. T. N. Cottam, G. S. Rand and Lawrence with this note: "Simplicity and taste in arrangement, against inharmonious and crowded contrast."

In analyzing the plants in number and actual value there is no doubt about Mr. Stumpff's collection being the largest and of greater value by more than half, but that proves there was too much paint. In the center of Mr. Stumpff's room was a superb plant of a bright rose pink azalea, 4x4 feet, but it was so intrusive that it appeared to be the only feature of the drawing room. In drawing rooms there should be room for pictures, furniture and guests; flowers and plants should be the least obtrusive; this azalea was the most obtrusive. The mantel piece proper, the sides of the mantel and the fireplace were elegant, but the crowning to the pier glass above the mantel was packed and packed.

The pansy panels in the corner were excellently wrought and showed great skill, but the walls and the ceiling and the carpet did not fit the purple and gold of this fine piece—in other words the panels did not fit the permanent decorations of the room, which should always be considered; I mean the permanent decorations should be considered.

The groups in the corners were in good taste, rather crowded perhaps, but if the beautiful azalea had been placed in the left hand corner of the room it would have been in a much better position.

Mr. Warendorf's decoration was a piece

SECOND PRIZE DECORATION—BY STUMPP.

DRAWING-ROOM DECORATIONS AT THE NEW YORK SHOW

of simplicity. The arrangement of his palms could not have been improved upon. He had not as good a room as Mr. Stumpp had; he had no mantel to decorate.

In the extreme left hand corner was a settee across which he wove an arab gracefully cosy and retiring. Arcuate lutescens, a few kentias and latanias composed it. Midway the right and starting from the wall was a crescent of palms composed of the same kinds as was his arab.

The drapings of the walls and chandeliers was of southern smilax, expressive, massive, yet elegant. In the center of the room was a large group of Harrisii lilies,

cut. The color was O. K., but the odor was very oppressive. This was a weak point.

To cover up the nakedness of the palms in pots Mr. Warendorf used cut leaves of chamaerops palm. This was a mistake. A few ferns would have been in a great deal better taste because one does not expect to find palms in a cellar or water lilies in a garret.

All these points should be considered in close competitions because it is right. Ignore impossible conventionalities. Let us always remember that "the art itself is nature."

I feel assured that these drawing room

decorations will do good. The best decoration was Mr. Warendorf's. The best collection of plants was Mr. Stumpp's.

In this criticism there is naught extenuate or set down in malice.

JOHN THORPE.

Favorable Decision on Imported Roses.

LIVE PLANTS—ROSE, CLEMATIS AND MANETTI STOCKS.

Before the U. S. General Appraisers at New York, April 9, 1891.

The matter of the protest, 4017, of Geo. Moulson & Son, against the decision of the collector of customs at Rochester, N. Y., as to the rates and amount of duties chargeable on certain live plants, rose, clematis and manetti stocks, imported 3d per cent, December 23, 1890.

Opinion by SHARRETT'S, General Appraiser.

The merchandise consists of live plants of the varieties known as dwarf roses and manetti stocks upon which duty was assessed at 20 per cent ad valorem, under paragraph 282, act of October 3, 1890. The appellants, who are proprietors of the Union Nurseries, Rochester, N. Y., claim that these plants should have been admitted free under paragraph 666 of said act. At the request of a large number of persons and firms directly interested, we have further considered the question of the proper classification of plants the kind covered by the Board's decision of January 26, 1891 (G. A. 273), which includes the varieties upon appeal, and have sought information from prominent nurserymen, florists and seedsmen doing business in different sections of the country as to whether or not plants of the kinds specified are chiefly used for forcing under glass for cut flowers or decorative purposes. From the replies received and testimony of witnesses who appeared before us, we find the following facts:

Clematis plants are to some extent imported and used for forcing under glass for decorative purposes at Easter time. This use, however, is exceptional. They are more generally employed in out-of-door cultivation. We therefore adhere to our former ruling relative thereto.

Manetti stocks are the stocks of the wild rose plants of southern France. They are never grown under glass for the flowers they bear, but are intended to have other varieties of roses grafted or budded upon them. They are recognized as nursery stock and are chiefly grown in the open air. The claim of the importers is rejected as to this portion of the merchandise.

Rose plants are largely grown both under glass and in open grounds. Many varieties when imported by nurserymen are kept in open ground or in cold storage pits to be sold in a dormant state. Florists importing the same varieties grow them under glass, while by other dealers they are imported and sold at auction, in which case their subsequent use is merely a matter of conjecture. To attempt to classify each plant in accordance with the specific use to which it is to be applied is impracticable and would result in unjust discriminations. As heretofore held by us, the chief use of imported plants controls their classification. While the evidence as to the chief use of rose plants is somewhat conflicting, we find from the preponderance of testimony before us that the larger portion of the varieties imported are used for forcing under glass for cut flowers or for decorative purposes. The claim of the appellants is therefore sustained as to the rose plants, and G. A. 273 is modified in accordance with this ruling.

The "Divine Flower."

Says Mr. J. Douglas in the London Gardeners' Magazine:

"It is pleasant for us who have admired the carnation for a life-time to see the interest now taken in it, both as a hardy garden flower and a plant that will with careful culture produce its sweetly scented blossoms all the year round. When the southern section of the National Carnation and Picotee Society was started in 1875, florists' flowers, including the carnation, were not much cared for; now they are cultivated in every garden, and information is constantly and eagerly sought for concerning the best means of culture. Not very long ago the botanist and the florist were supposed to be antagonistic to each other, but conferences and the gardening press have broken down the wall of separation between them, and we feel the botanists to be men of like feelings and having much the same tastes as ourselves. Most of us have spent days of unalloyed pleasure in tramping for miles over moorland and among country lanes searching for rare botanical specimens, but it does not follow that we should turn away from a bed of carnations in bloom. The *Dianthus caryophyllus* of the botanist would be a lucky find. It has probably been naturalized and may not be, strictly speaking, a native plant. It is found generally upon old walls and ruins. Curtis went out of his way to figure a beautiful bizarre carnation in the second volume of the *Botanical Magazine*, 1788, and he therein informs us that the *Dianthus caryophyllus* or 'Wild Clove' may be found, if not in its wild state, at least single, on the walls of Rochester Castle, where it has been long known to flourish, and where it produces two varieties in point of color, the pale and the deep red.

"If we search among the books of the old herbalists we find that the carnation is a good old English flower. The Double Clove was grown by Gerard in 1597, and the same famous gardener and botanist was the first to cultivate the yellow carnation, which he obtained from Poland through a London merchant named 'Master Nicholas Lete.' In 1629 Parkinson cultivated quite a collection of double carnations, some of them so very double as to bother him by bursting their pods (calyx). As a further evidence of the antiquity of the carnation even in Parkinson's time, he writes of the 'Great Harwich or old English carnation, a good flower worthy of a prime place.' Parkinson's quaint and precise descriptions are very amusing, but it would be unwise to propose to quote them except to recognize the fact that the yellow carnation was then cultivated in variety and that streaked flowers were also grown. Not until Miller's time, a hundred years later, do we find a proper standard of excellence set up to guide raisers of seedlings. It is not the same exactly as that determined upon by the late Mr. Richard Headley and a committee of florists in 1834, but it is a very good ideal to work up to, and as the date of Miller's work is 1733, it gives us the best idea of the position of the plant in the English gardens.

"He says the florists divide the carna-

tion or Clove gilliflower into four classes. 'The first they call flakes; these are of two colors only and their stripes are large, going quite through the leaves (petals)'. The second are called bizars; these have flowers striped or variegated with three or four different colors. The third are called Piquettes; these flowers have always a white ground, and are spotted (or pounced as they call it) with scarlet, red, purple and other colors. The fourth are called Painted Ladies; these have their petals of a red or purple color on the upper side, and are white underneath.' The names of the different varieties were very numerous in Miller's time, and he thought it useless to give them.

"The following are the properties given by Miller:—(1) The stem should be strong and able to support the weight of the flower without hanging down. (2) The petals of the flower should be long, broad and stiff, and pretty easy to expand, or (as the florists term them) should be free flowers. (3) The middle pod of the flower should not advance too far above the other part of 'blower' (flower?). (4) The colors should be bright and equally marked all over the flower. (5) The flower should be very full of petals, so as to render it, when blown, very thick and high in the middle, and the outside perfectly round. It will be interesting to florists to read the above from Miller, who was a predecessor of the late Mr. Thomas Moore, in the Chelsea Botanic Gardens, also like Miller, designated a 'mere botanist.' Miller also gives the most careful cultural details, which differ but little from the method pursued in our own gardens now."

The above contains some very interesting and valuable information and it comes at a time when many of us are turning our thoughts in the direction of the Divine Flower.

It will be seen that the standard of excellence was equally as high, with some variations, a century and a half ago as it is to-day. It is understood of course that in those days carnations for winter blooming were not used to any great extent, but as it is conceded that the carnation as we find it in America is a product from the 'Clove Gilliflower' of our fathers, the facts recorded come home to us with equally as much force as they were.

To the extremely practical florist, as we find him, it may not seem necessary to link the horticulture of the past to that of the present, yet there will be found none to dispute the fact that it is a benefit to the rising and active generation, to absorb as much horticultural history as possible, by which means we are led on to that higher education for which so many of us have been longing.

In 1629 Parkinson cultivated quite a collection of double carnations, some of them so very double as to bother him by bursting their pods" (calyx).

That's interesting. We have not yet bred out that tendency, up to the year 1891.

The question comes up: has any intelligent and well directed effort been made in that direction? We can with confidence say, certainly there has, but the results have not been what we can call entirely satisfactory.

Length, breadth and substance of petal and nicely disposed is what the breeder must keep in his mind's eye if he would attain to the Beau Ideal in the carnation. It is the number and not the size of the petals which is the cause of the bursting of the calyx.

EDWIN LONSDALE.

Spring Flowers—May 4.

The B. A. Elliott Co. are doing a very good trade in hardy herbaceous plants. The collection is replete with meritorious species and varieties. We shall soon find out that there will be a great run in all hardy plants.

When I was there the other day I jotted down the following as being in flower; surely those who love flowers would appreciate these harbingers:

Anemone Pennsylvania and *triloba* with their exquisite blush, white, pink and lavender shades.

Alyssum saxatile compacta—large masses of pure golden flowers.

Aubretia purpurea, violet purple; deltoidea, larger than the preceding, covering stones on hilly banks.

Dicentras canadensis, cucullaria, spectabilis, all worthy and should be in all collections.

Doronicum Plantagineum excelsum, deep yellow, a valuable plant, hardy as a peltain, covered entirely with sunflower-like flowers 2½ inches across.

Funkia pinnatifida, for its foliage, handsome and effective.

Hencher sanguinea. This plant is perfectly hardy and its bright red spikes are very pretty, a valuable addition.

Iberis sempervirens, *Corca* and *gibraltarica* in large snowy white patches.

Lysimachia nummularia for its pure golden foliage at this season is a gem.

Myosotis dissitiflora with its bluest flowers.

Primroses and *polyanthus*; some few marked forms of the latter and a colony of English primroses, besides the Japanese *Sieboldii*.

Sanguinaria canadensis, just past, but its distinct foliage is always interesting.

Trillium in immense quantities; how lovely these wood lilies are!

Veronica gentianoides, a gem in its opaque white dress.

The exquisitely blue *Mertensia virginica* in large masses.

Viola, a dozen species, and as many more varieties.

Iris in variety, reticulata and siberica, the beginning of an army that will appear in great array in a week or two; these are as handsome as orchids.

Pæonia tenuifolia plena and *anemone-flora* were bright and effective.

Native *cypripediums*, *acaulis*, *parviflorum* and *pubescens*, in cozy nooks were in bloom.

Palustris mollis and *maculata*, blue and lavender.

Phloxes, a glorious lot of these, some 20 kinds, including setacea on banks and mounds.

JOHN THORPE.

Wedding Decoration at N. Y. Show.

A wedding bower—that is what I thought this beautiful design was. The background was a mirror which added greatly to the effect. Kentias and arecas reached up to the ceiling (which was 16 feet high) forming a symposium of graceful foliage as outlines to the bower. Large vases of cut pink roses on either side gave an expression of color to the delicate green of the palms and ferns. Standing at the back of all, on the floor, were finely flowered *Lilium Harrisii*. In front of the bower was erected an altar rail covered with fine tapestry, in front of which was a kneeling place for the bride and bridesroom. Sundry ferns, pandanus and dracaenas were used in the filling in and rounding up of the outlines. The general opinion of this design was that it was a No. 1. Mr. Stump was the winner.

FIRST PRIZE WEDDING DECORATION AT THE RECENT EXHIBITION OF THE NEW YORK FLORISTS CLUB

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XXVII.

LAW TALK FOR A SICK MAN.

Not feeling very well this morning, eh? Why, I imagined that men who followed the calling of grandfather Adam were never out of sorts. The open air, the active life, the contact with nature ought to make your calling a cure for at least one half the ills of the flesh. Well, as you are feeling somewhat wilted suppose I water your spirits with a spray of legal advice. Nothing like the hair of the dog for his bite you know. However, I promise you not to be too depressing in my chat.

Let me commence by assuring you that the law keeps its eye upon the sick man, and will not permit him to be harried. For instance, upon the affidavit of your physician it will excuse you from attending as a witness and if need be it will send a commission to your bedside and take your testimony. So, too, contracts to do such things as sing, dance, play, paint, will not carry damages against a man who falls sick unless, of course, there be a clause that damages shall be paid in any event of failure to perform the contract.

But with you it would be different; because you fall sick to-day would not

excuse you from a covenant to furnish one thousand long stem roses or one thousand feet of garlands for the decoration of a ball room. You may delegate such a task which a portrait painter or opera singer can't do.

Nor does the law require a sick man—a paralytic to sign a will or contract, he may merely lay his fingers on the pen while some one else writes the name.

You must not expect the law to take a sentimental view of things. The death of your wife or of an only child would not be a sufficient excuse to set aside a judgment taken by default.

Or we'll suppose your principal witness is attacked with softening of the brain and mixes up dates so as to destroy the effect of his testimony. You may, if you can, correct his errors by other witnesses, but the law will not display any leniency in a civil matter. It is only in criminal cases that a judge sometimes inclines to mercy, the statute gives him a wide range of discretion, and he has a right to take advantage of it.

If a man became dangerously ill, that is, is brought face to face with death, then the law lays great importance upon his utterances, for it is quite natural to suppose that unless a man is constitutionally incapable of telling the truth he will be moved to state things as they are when he is brought face to face with death. There is no longer any reason for his distorting facts. His day is over and

he feels the chill breath of death on his leaves and the keen edge of the fatal scythe set against the stalk of the plant of life.

Now another peculiar notion the law has about death. It is this: If a well man makes you a present and delivers the article he can't take it back again. It becomes your property absolutely. But suppose you to-day should get an idea that you were going to die and should with that notion in your head give me that splendid century plant which you value so highly. But next week you have scraped your liver, watered your fever parched system with cooling draughts and let the sunlight of cheerfulness into your dark and cheerless heart, in other words you get well. In that event your gift would amount to nothing. The century plant would go back to you again.

The law is really very kind to a dead man—it makes a will for him, protects his remains from indignity, takes the guardianship of his minor children, makes his decent burial the first debt to be paid, holds his burial plot sacred from all creditors and gives him usually seven years to come to life again, provided there be no actual proof of his death, that is a mere disappearance. This period, however, varies in different states, in some it is only five.

Nor will the law allow a man's death to prove an injury to the living. By

FLORICULTURE IN THE UNITED STATES.

The accompanying statistics are compiled from the census bulletin recently issued, and are given as supplemental to the synopsis published in last week's issue. We believe that every one of our readers will find the figures very interesting.

which I mean: when the witness to a will dies you need only prove his signature. A man's death ends a partnership at the instant, so it makes a widow and frees the woman from all duty to bid a wee before taking another husband.

But on the other hand the law is very careful to insist upon the best proof of a man's death. No man may lawfully be consigned to the grave until the attending physician makes oath as to the nature of the malady, etc., and the law officer of the county or city has the right to order an inquest if there should be anything suspicious about the last sickness and death.

If a man and wife perish together the law will presume that the woman died first, so as to fix property rights.

The law too by statutory enactment makes it incumbent upon us to take care of our sick relatives, and not to throw them upon the county for support. Nor may any voodoo doctor, faith cure practitioner or prayer doctor practice his or her peculiar system on a sick person. In case of death it would be manslaughter.

In fact, although people don't always think so, the law is very jealous of human life and makes water, light and air absolutely free. True, when you build that half mile of trench to water your nursery your neighbor had no right to use the water. But speaking of running water in brooks, streams, etc., that is free as the air. It would be no larceny for children or a tramp to enter your yard and drink from your well, although it

might be trespass. And speaking of light, while you may not shut out the light from my front or rear windows, yet if our lots adjoin you would have the right to build a story higher and cut off my side windows.

Feel better already do you? Glad to hear it. Nothing like a little cheerful conversation when a man feels depressed.

Now there is a moral, a business moral to this chat of a garrulous old lawyer and it is this: Life is uncertain, it's a plant that needs constant care and often calls for a forcing frame. On the other hand death is as uncertain as the weather. A frost or a drought may strike you any moment. Therefore keep your earthly accounts always well written up. Know where you stand. Don't merely enter up

ITALIAN FLOWER GARDENS, SALTSBURN-BY-SEA ENGLAND.

credits and flatter yourself that you are well to do, when an expert accountant would show you to be worse off than nothing in fifteen minutes. Look out for that liver of yours. Hope to find you better to-morrow.

UNCLE BLACKSTONE.

Boston.

There is a fair supply of roses and carnations in the cut flower market; white stocks are very abundant, but sell poorly. Among the novelties which seem to be in good demand are quantities of the beautiful "Blanche Ferry" sweet pea and the Cape violets. This Cape violet comes from Cape Cod and is apparently nothing more than the double English violet grown in a very favorable soil and location. It is perfectly hardy on the Cape and is used largely in borders. It is very dark in color, very double and deliciously fragrant and blooms profusely.

Hydrangea plants are abundant in the flower stores and auction rooms and are of unusually good quality.

Another plant auction establishment has just been started, making three in the city, all selling on the same days, Wednesday and Saturday. As they are quite widely separated from each other the buyer who would like to patronize all three will have a good opportunity to exercise his legs.

The tulip beds in the Public Garden are looking very attractive just now, and Mr. Doogue is busy planting the pansies which are to take the place of the tulips as soon as the latter are out of bloom. To those who prefer decorations of a less formal character the dells and slopes of the Back Bay Park are beginning to present a charming picture with masses of flowering shrubs, ground phloxes and violets.

The severe frosts a week ago did much

damage to early flowers and foliage in many localities in this section, magnolias, dicentras, etc. being completely spoiled.

The old Granary Burying Ground on Tremont street, where so many famous men of the last century are laid away, is undergoing a thorough overhauling. The overcrowded and in many cases half dead trees are being thinned out, borders replanted and the soil enriched and prepared for new turf.

The stock of Alexander Whittet at Lowell, who failed recently, was sold at auction on May 8. Among the assets of M. Doherty, of Brockton, which went off under the auctioneer's hammer last Tuesday was a horse, harness and wagon, which is said to have been knocked down for the princely sum of \$1.60.

In the last number of the AMERICAN FLORIST it is stated that Mr. E. V. Low had sailed from New York for England. Mr. Low sailed from Boston on the Cephalonia on May 2, and the rare cypripedium accompanied him. New York must not claim too much.

Among our recent visitors from abroad was Mr. Fred Benary. Mr. Benary went to see the pansies at Zirngiebel's, which were a surprise to him and were, he said, ahead of any he had ever seen in Germany. Mr. Bodington, representing Pitcher & Manda, and Mr. Dimmock, representing F. Sander & Co., have both favored the Hub with a business trip recently and are said to have struck some good orders.

Information from Chicago regarding the prospects of the appointment of inexperienced parties to take charge of the Horticultural Department of the World's Fair has caused considerable excitement in horticultural circles about Boston and many protests in the form of letters and telegrams have been forwarded to Chicago by leading men of the Mass. Horticultural Society, the Society of American

Florists and the Gardeners' and Florists' Club.

At the last meeting of the G. and F. Club the usual committee was appointed to make arrangements for the annual harbor excursion of the club, which will occur some time in July.

The May exhibition of the Mass. Horticultural Society was held on Saturday, 9th inst. The display of calceolarias from Dr. C. G. Weld, A. W. Spencer and Jos. R. White was very attractive and well filled the center of the hall. There was quite a good show of tulips, narcissus and other hardy spring flowering bulbs from the Bussey Institution, Dr. C. G. Weld and others. Jackson Dawson showed an interesting collection of flowering shrubs, and from the Harvard Botanic Garden came a superb collection of hardy herbaceous flowers comprising about seventy-five varieties and being doubly instructive from the systematic manner in which each one was plainly labelled.

The displays of wild flowers from Mrs. P. D. Richards and Mr. E. H. Hitchings were as usual a most attractive feature of the show. Magnificent collections of pansies were shown by Jos. S. Fay, D. Zirngiebel and I. E. Cushman. Rea Bros. were awarded a silver medal for *Spiraea astilboides* and *Astilbe Japonica grandiflora*.

W. J. S.

New York.

Prices of roses have increased owing to the falling off of the supply.

Outdoor flowers still continue very plentiful and cheap with the exception of peonies, which are selling at a good figure.

In Mr. Thorpe's notes on the illustration of the first prize corsage bouquets and boutonnières at the recent show he

refers to it as the Horan prize. This is a mistake and as a matter of course should be corrected, as this cup was offered by Mr. W. S. Allen.

The cup offered by Mr. Horan was for the best two bridal bouquets, and was also won by Mr. Merritt.

JOHN YOUNG.

Philadelphia.

One of the finest store decorations ever made in this country was to be seen at John Wanamaker's grand depot in this city last week. The annual spring opening at Wanamaker's is a grand affair and the store on these occasions has always been elaborately decorated, but this season all previous efforts have been eclipsed.

On entering the arcade from Chestnut street, the main entrance, the effect was beautiful. On an elevated staging, extending upward from a point about ten feet above the aisle to the next floor was arranged a bank of roses in 6 to 8-inch pots; 500 plants at least were used in this group, all in full flower; the background was formed with large palms.

The main aisle of the store extending from Chestnut to Market street is five hundred feet long and on the ends of the counters facing this avenue the plants were arranged in pyramids of solid colors extending the entire length of the store and connecting each group over the intervening aisles was a series of arches about two feet in width lined with palms, hydrangeas and other blooming plants. The pyramids were 10 feet wide rising to a point about 8 feet high.

The first group was composed of pelargoniums opposite which was a like arrangement of pot roses; next white geraniums; opposite group a beautiful bank of gladioli and *Cypripedium Lawrenceanum*; next counter pink azaleas; opposite pink hydrangeas; next by a stairway a bank of 200 pink geraniums.

Here a large cross avenue divides the store, an opening extends to large skylights in the roof and as all floors are open to this space the view is beautiful.

On the tops of large cases skirting the aisle was arranged on the one side a large group of blue hydrangeas and opposite a similar one of pink, continuing along the main aisle the first pyramid was of callas; opposite a bank of *Lilium Harrisii*; next two banks of roses, and then white geraniums and white stocks; opposite scarlet geraniums, a group of pink opposite; blue hydrangeas followed, then scarlet and pink geraniums; next two banks of roses, two groups of daisies followed, then a bank of roses; opposite, geraniums; the next was gentians, opposite, hydrangeas, then azaleas and rhododendrons; opposite, geraniums.

We have now reached the Market street entrance where we find a large group of hydrangeas opposite a similar bank of roses.

The smallest plants used were geraniums in 4-inch pots, all others were in 6-inch or over, and in many cases were in double rows, one pot on another so as to make the mass of color.

From 7,000 to 8,000 plants were used and this means that much profit to the trade, as with the exception of the palms they were not fit for much but the rubbish heap at the end of the week. There were used among other plants 700 hydrangeas, 1,200 geraniums, 1,000 pot roses. Habermehl & Brother had charge of the decorations and a great deal of credit is due them for the beautiful way in which everything was arranged.

Trade has been fairly good on this season and most florists are satisfied. T.

The New York Show.

Who are the best judges of floral art? When a person makes a design for exhibition he does not try to copy work he has already done, but makes an effort to exceed all former creations and consequently tries to elevate his art. What are exhibitions for? Do people go there expecting to see everyday work, or has the art of arranging flowers arrived at the zenith of its glory?

The selection of judges at exhibitions is a very important matter and I hope that the discussion begun in a late issue of the FLORIST will be full and complete.

Referring to the exhibition of the New

York Club, in my opinion the judges should have been selected from among out-of-town florists (similar to the judges of growers' exhibits) whose judgment should have been given unaccompanied by any one and before the show was open. I believe also that a mistake was made in giving an exhibitor the same number all through as was done in this case.

Regarding the table decorations criticised in your last issue the critic forgot to mention that the competitors could not see their tables until their designs were made, that those tables were ordinary restaurant tables. Was a long table 8 feet by 4 the proper one to furnish? Is this the proper size for a seating of twelve? It only goes to show a prelude to the after circumstance. The competitors came there with furnishings for twelve. All the service with the exception of a plate and a few glasses had to be left off. Regarding the height of flowers on tables that is a matter depending upon circumstances. Would Mr. Thorpe like to see his fine chrysanthemums cut off six inches long and massed together? The flower is robbed of half its beauty when cut too short. Now let us take Mrs. Astor's table, which is always decorated with hybrid roses that stand 2½ feet high when arranged. W. K. Vanderbilt uses American Beauties three and four feet high; Cornelius Vanderbilt, W. C. Whitney and others have their tables decorated with roses in a natural arrangement. Although a low effect is desirable yet every one does not want it.

The corsages exhibited by Mr. Hodgson were very pretty, but more like ball favors or loose bunches; they were too large for corsages. And again has any one ever seen or is likely to see ribbons worn on corsage bouquets in the street or in the theater? I hope all this discussion about our show will benefit others in the future. AN EXHIBITOR.

Society of American Florists.

COMMITTEE ON NOMENCLATURE, 1911.

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

IN ORDER to bring the various florists' clubs and societies into closer relations we suggest that each club appoint or elect one or two delegates to represent it in a conference to be held at Toronto next August during the annual session of the Society of American Florists. The meeting should be held away from the sessions of the national society. A club room in some hotel would be large enough. There let the delegates come together and discuss ways and means of stimulating interest in and broadening the influence of the clubs. A general exchange of views and experiences would be of decided mutual benefit. And a condensed report of the discussion might be read at a subsequent session of the national society with profit. How would it do for the Toronto club to issue a call for such a meeting?

CHRYSANTHEMUM Culture for America, by James Morthon, has been issued by the Rural Publishing Company, New York. Much valuable information regarding the "Queen of Autumn" is brought together in this book and it will prove very acceptable to American growers of the chrysanthemum. A lengthy list of synonyms is given which we hope will stand the test of criticism, though we fear some will be called in question. It is to be regretted that the titles under the illustrations were not more carefully read by the proof reader, and when a name is given in one part of the book as a synonym it is rather disheartening to find it used as the proper name in another part. In a book of this kind every possible care should be exercised to have it free from such imperfections.

A COPY of the printed programme for the sixteenth annual meeting of the American Association of Nurserymen, which will be held at Minneapolis, Minn., June 3 to 5, has been received. The programme covers a wide range of subjects, the speakers being all limited to ten minutes for full and complete discussions, which we are glad to see thus recognized as the most valuable feature of the convention. The headquarters will be at the West Hotel. A reduced rate of one and one third fare for the round trip has been secured from the railroads. There will be the usual trade exhibition. Copies of the programme may be had on application to Charles A. Green, secretary, Rochester, N. Y.

HOW MANY florists obtain receipts from customers for goods delivered on order? If you are one who do not, would not the addition of the practice to your business methods do much to prevent disputes, resulting possibly in the loss of a customer? We believe that every business man should secure and preserve receipts for goods delivered; and with such goods as cut flowers and floral arrangements where the time of delivery is of such importance the recipient should be asked to note the hour of the delivery on the receipt, in a blank space provided for that purpose.

THE APPOINTMENT of Mr. Walter S. Maxwell for chief of the Horticultural Department of the World Columbian Exposition was not confirmed by the local directory at the meeting last Friday. So many protests against a confirmation of the appointment had been received by the board that a committee of three was appointed to investigate the matter of Mr. Maxwell's fitness for the position. The committee is to report at

the next meeting of the board and definite action is deferred until that time.

THE CATALOGUE TRADE in plants is also covered in the census bulletin from which we quoted in last issue. During the census year there were issued 3,425,600 wholesale and 17,630,094 retail catalogues. The firms issuing them paid for postage \$767,438.21, for advertising \$1,161,168.31; for freight \$534,221.86; for express \$554,390.55; and the estimated freight and express bills on outgoing shipments was \$1,086,904.60.

GREAT CREDIT is due to Mr. J. H. Hale, South Glanstonbury, Conn., special agent for floriculture in the U. S. census, for the completeness of the statistics regarding the trade as shown in the preliminary bulletin from which we have freely quoted in this issue and that of last week. He has certainly spared no effort to make his report full and complete.

YOU can give the AMERICAN FLORIST your fullest support by confining your orders to those who advertise in its columns, and when ordering mentioning the fact that you were induced to order by the adv. in the FLORIST.

ASTORIA, N. Y.—John Dean, the 14 year old son of David Dean, the florist, was struck in the chest by a base ball while playing with some companions, and sustained an internal injury which resulted in his death.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By single man (German) as general grower or to take charge of houses. Address FLORIST, 1201 State, New York City.

SITUATION WANTED—By lady who has had some experience as a single florist to assist in cut flower work for city trade. Address HOPEFUL, care American Florist, Chicago.

SITUATION WANTED—By young man of good sober habits, good potter and fair knowledge of the business, commercial place preferred; reference from last and present employer. Address N. C. care American Florist.

SITUATION WANTED—By a thorough, practical man to head garden or manage a large private or commercial place; experienced in all branches of the art, particularly qualified in rose, tangerine plants, carpet designs, rockwork, and landscape gardening. Unexcelled in orchid culture. A successful hybridizer. Wide knowledge of vegetable and grape culture. Only first class place required. Married, small family. 20 years' experience. No references. Address C. L. LINKER, General Delivery, Pittsburgh, Pa.

WANTED—To correspond with a party who thoroughly understands bulb growing, and would come to Bermuda. Address GEO. W. WEST, Shelby Bay, Bermuda.

WANTED—A florist who thoroughly understands rockwork and will well up in floral work. Address with references, G. VAN BOCHYVE & BROS., Kalamazoo, Mich.

WANTED—A sober man who understands general greenhouse work. Steady work and good treatment in large commercial establishment. Address N. N. care American Florist.

WANTED—Good second hand boiler capable of heating 1000 ft. of 1 1/2 inch pipe. Price of 4-inch pipe, must be cheap for cash. Address V. P., Box 145, Riverside, Cook Co., Ill.

WANTED—A young florist, good general greenhouse work, must be steady, work and making up; must be well recommended. When applying send references and mention wages expected. Address JOSEPH B. BROWN, Bridgeport, Conn.

WANTED—Immediately, man to take charge of greenhouse, must be sober, industrious and well qualified in all branches of the floral business; none but good men need apply. Refer to references to ADRIAN FLORIST, Chicago.

FOR RENT OR SALE—Four houses (flat), heated by steam; convenient to cable cars; in a prominent western city. Special bargain. Address K. K. care American Florist.

☉ Re Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president, JOHN FORTISS, JR., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

MR. F. BENARY sailed for home from New York on Thursday, May 7.

SYRACUSE, N. Y., May 5.—A. D. Perry & Co. had a very narrow escape during the recent extensive fire at this place.

MR. D. M. FERRY, wife and daughter spent a few hours in Chicago on the sixth on their way home from a two months' pleasure trip in California. Mr. F. is in excellent health.

MR. A. BLANC, of Philadelphia, is reported to be a loser by the failure of the Spring Garden National Bank of that city. We trust that Mr. Blanc with his usual good nature still has most of his spring accounts in the hands of his customers.

New Notes.

ST. LOUIS.—In consequence of the recent death of Mr. John Juergel, of John Juergel & Son, the business will be now conducted under the new style of Chas. A. Juergel, at the old stand, 1843 Linn street.

NEWPORT, R. I.—The Newport Horticultural Society will give its second annual chrysanthemum exhibition November 10 to 12. The premium list has been printed and copies may be had on application to the secretary.

MILWAUKEE, WIS.—The Wisconsin Florists' and Gardeners' Club at its last meeting decided to hold its chrysanthemum show November 3 to 6. Wm. Lauf, formerly with F. Schmeling, is building eight new greenhouses opposite Calvary Cemetery. C. B. Whitnall & Co. have removed to a new store not far distant from their old stand. Their number is now 438 Milwaukee street.

HAMILTON, ONT.—The Gardeners' and Florists' Club of this city will hold a rose show, open to all the world, the last week in June. Premium lists and all information can be had of the secretary, H. Brown, Wentworth street. The club hopes for spirited competition and a grand exhibition showing what can be done in the gardens of Canada, the Niagara peninsula. The two classes of exhibitors, professional and amateur, are kept distinct and special sets of prizes allotted to each. We hope to hear from our friends within reach all round: Rochester, Buffalo and New York; and why not Cleveland, Detroit and Chicago?

SYRACUSE, N. Y.—Albert Burt, the florist, has left town and is supposed to be in Canada. His several establishments are in the hands of the sheriff under a judgment in favor of Henry Burt, his father, for the sum of \$18,835.54. Burt is reported to have been neglecting his business for some time. It is also reported that there is a woman in the case and that she accompanied him in his flight. It is estimated that Burt's liabilities will aggregate between \$40,000 and \$50,000, with nominal assets of about \$30,000. His father is secured over the mortgages for the notes outstanding. What will be left for the creditors, it is feared, will be small.

CHOICE AMERICAN GROWN FREESIA BULBS, READY IN JUNE.

Some Choice Orchids.

Among the latest additions to the very valuable collection of orchids in the possession of Mr. F. T. McFadden, Rosebank, Cincinnati, O., is a new variety of Cattleya Mossiae named Renckiana. This plant has seven bulbs and two leads with four flowers; petals and sepals pure white, throat orange yellow with a few lavender veins on lip. This is a rare kind; it is believed there are but two plants in America, the other being in the possession of F. L. Ames Esq., of Boston.

Vanda Parishii Marriotiana, Cypripedium Seejerianum and Mastersianum, lately received from Messrs. Low, of London; Odontoglossum crispum, sepals and petals pure white, with yellow throat, a most lovely flower, quite distinct.

Within the next few days there will be from 1200 to 1500 blooms of Cattleya Mossiae alone.

Hybrid roses and chrysanthemums are also grown largely here, acknowledged to produce the finest blooms in this section.

All the plants bear testimony to the care and attention bestowed upon them by the able and courteous gardener, Mr. Ino. Rose, who is always pleased to meet an interested visitor. A visit to this delightful spot will never be regretted by any of our brethren who can pay one, especially in spring or fall. N. MOTT.

Correction.

ED. AM. FLORIST.—In the report of the Baltimore flower show I am credited with having shown in my collection of carnations "The American Flag" and "Grace Darling." This is an error, as my exhibit consisted entirely of my own seedlings.

The report also states that the "Fred Creighton" was by far the finest of the lot. I don't find any fault with that, but in justice to my other kinds would say that a plant or two of each was all that were in bloom, so I had to scratch up everything in the shape of a flower, but I had over 600 plants of the "Fred Creighton" in good bloom, and of course only cut the very best.

GEORGE CREIGHTON.
New Hamburg, N. Y.

Judging by Points.

The Newport Horticultural Society has adopted the following scale of points for the judging of chrysanthemum plants at its coming exhibition:

Size of bloom and quality	30 points.
Size of plants	30 "
Foliage	20 "
Distinctiveness of form & color	10 "
General effect	10 "

WANTED.

STRICTLY FIRST-CLASS FOREMAN

To take charge of a large commercial place. Must be thoroughly posted in growing fine Cut Flowers of all sorts, to take care of Palms, etc. Address with full particulars as to wages expected and experience,

CRITCHELL & CO.
CINCINNATI, OHIO.

ROOTED CUTTINGS.

CARNATIONS:

Have a fine lot of MRS. FISHER now ready, at \$1.50 per 100; \$12.50 per 1000. This sort is a good strong grower, and these cuttings will make good sized plants for next winter's blooming. Am sold out of all others.

COLEUS:

Well Rooted Cuttings of a choice assortment, all good bedding varieties, and an extra large stock of VERSCHAFFELTII. Price, \$6.00 per 1000; 250 at 1000 rates.

PANSIES.

I have still a few of these left; they are fine blooming plants and an extra choice strain. Order at once to secure them. Price is \$1.75 per 100; \$15.00 per 1000.

My Pansies are meeting with the largest sales of any strain in the country, and I shall grow this season not less than half a million to accommodate my customers, some of whom were disappointed last season, but it is not too early to have your order booked—make assurance doubly sure.

The \$6.00 per 1000 SMILAX is all sold. About the last of June and the balance of the Summer, will have some fine pot plants. See adv. for these and Pansies next week.

AMERICAN FLORIST.

YOUNG ROSES.

Having more than doubled the producing capacity of our Rose houses during the past two years, we are able this season to offer to the trade a very fine lot of young Roses. The varieties are principally hardy and well tested **HYBRID PERPETUALS**, such as we grow in large quantities for our own planting. The plants were propagated this winter and are now in 2½-inch pots in the best possible condition either for planting in the open ground or for shifting. Our list comprises the following good varieties and others, viz:

Alba Carna,
Admiral LaPeyrouse,
Alex. Bachmetief,
Achille Gonod,
Annie de Diesbach,
Antoine Mouton,
Baron de Bonstetten,
Baron Moynard,
Bertha Baron,
Baltimore Belle,
Baron Taylor,

Beauty of Waltham,
Blanche de Meru,
Baronne Prevost,
Belle of Normandy,
Charles Ledebvre,
Caroline de Sansal,
Climbing Jules Margottin,
Climbing Victor Verdier,
Coquette des Alpes,
Comtesse de Serenye,
Doctor Hogg,

Doctor Andry,
Fisher Holmes,
General Jacqueminot,
Jules Margottin,
John Hopper,
La France,
La Reine Victor Verdier,

Chicago.

Trade has much improved. The demand has increased and supply fallen off to such an extent that prices have very materially advanced. There is now a shortage in the supply of many flowers, especially in fancy roses and carnations. Tulips are out of the market with the exception of a few late varieties. Hybrid roses are practically all gone and there is but a very limited supply of Jacqs. What Jacqs are to be had are of good quality, but they are very scarce and have been so for several weeks. Plenty of white carnations, but now very few long stemmed flowers of the fancy varieties are to be had and these are not of the best quality. Red peonies have made their appearance, being sent in from Indiana. They are selling at \$10 a 100. Some very fine sweet peas of the variety Painted Lady are coming in in limited quantities. Outdoor grown lily of the valley from growers around the city is beginning to appear in the market as is also Narcissus poeticus.

Mr. John Thorpe reached the city on Tuesday, the 5th. He expected to remain for two days only, but he found things so lively here that it was the evening of the 10th before he got away. While here he called upon Director-General Davis of the World's Columbian Exposition, and the Director-General finding that Mr. Thorpe was soon to visit Europe gave him a commission to represent the great exposition abroad, particularly in the interest of the Department of Horticulture. This was certainly a most desirable arrangement and will undoubtedly be of decided advantage to the exposition. Mr. Thorpe went from here to St. Louis and after a short stay there will visit Cincinnati, Cleveland, Buffalo, Rochester, Toronto and other cities.

Henry Mundt has purchased land at Harlem and will remove his greenhouses to the new place. J. F. Khimmer, also now at Harlem, has been elected president of the town board.

Mr. August Schenkel, the Denver florist, visited the city last Thursday.

M. F. Gallagher, the Wabash avenue florist, recently returned from an extended trip through the south.

W. G. Newett's greenhouses on Grand Boulevard were seriously injured by fire last week. The roofs of several greenhouses were burned off and the adjoining barn was also destroyed with its contents, including horses and wagons. The loss is estimated at several thousands of dollars, with no insurance.

The wife of Wm. A. Kennedy, foreman at the McCormick Rose Houses, Lake Forest, died last Saturday. The remains will be taken to Mont Clair, N. J., for interment.

3,000,000 HARDY CUT FERNS
MOSS, Sphagnum and Green Sheet.

BOUQUET GREEN & FESTOONING
of all kinds always on hand. In fact anything that grows wild.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness,
smoothness and durability, has never been equalled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT**
of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 3/4-inch.....	3,000	250 lbs.
2 ".....	2,400	200 "
2 1/4 ".....	1,750	150 "
3 ".....	1,450	120 "
3 1/2 ".....	1,250	100 "
4 ".....	800	60 "
4 1/2 ".....	600	50 "

It will be seen at a glance, that our pots are one-
third lighter than formerly, and yet we claim that
owing to the superior quality of our clay and im-
proved machinery, they are stronger than any pot
in the market, and we frankly ask you to make the
test. **SEND FOR PRICES.**

GROWING CROPS and fruit at Hoopston, Ill., were badly damaged by heavy frost the night of May 17. Grapes were killed. Two-thirds of the 800 acres of peas belonging to the Hoopston Canning Co. were cut to the ground.

WHEN YOU write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

Odontoglossums and Other Orchids at North Easton, Mass.

Many unsuccessful attempts have been made from time to time by orchid growers throughout the country to increase the popularity of these the most choicest of all orchids, but owing to our excessive summer heat and lack of suitable structures for them their culture has in some instances been discarded, though with many a regret.

At Langwater Gardens the collection owned by Mr. F. L. Ames is well worth visiting; there is now to be seen there such a magnificent floral display as is rarely to be met with, there being upwards of 1,000 fully expanded blossoms of *O. crispum* (Alexandra), many plants having four and five spikes, each with large, bold flowers and broad sepals and petals, which in some instances measured four inches across and were borne on long arching stems in a graceful and elegant manner; very few "starry" forms were noticed, all being the true "Pachio" type which is now so famous and far superior to the narrow petalled form. The *O. Pescatorei* were equally well bloomed, fully six hundred flowers were open. On one plant a handsome panicle had sixty blooms; numerous others were carrying on well branched stems thirty and forty flowers and among them a charming variety named *O. Pescatorei virginialis* having blossoms of the purest white furnished in the center only with a soft yellow blotch.

Among this group hybrids of different character were very prominent and many more were rapidly developing; the visitor will find a host of interesting things for several weeks to come. Some grand examples of *O. Wilckeanum* were bearing on bold spikes their sulphur yellow and rich red blotched flowers. The rare *O. elegans* was represented here by several fine, well grown plants which were carrying eight, ten and fourteen flowers; this is a beautiful orchid and a supposed natural hybrid between *O. cirrhosum* and *O. cristatum*. A strong plant of *O. Pescatorei* excellent was past its best, the yellow and chocolate spotting and blotches were rapidly fading. The golden yellow and chocolate flowers of *O. Hallii* were seen in profusion and several forms of *O. cirrhosum*, chief among them being Klaboch's form, which is easily distinguished by its larger flowers and much darker markings than the type. The orange scarlet flowers of *O. retusum* also blended well among this group and was much admired on account of its glowing color. The rare *Maxillaria*

Sanderiana was well bloomed with its massive white and pink flowers. *O. Warszewiczii* also had a strong spike, and many flowering *oncidiums*, among them *O. concolor* and a fine specimen of *O. superbis* bearing numbers of its yellow and chocolate blossoms.

Placed here and there about this structure quantities of *masdevallias* were seen. Much attention is bestowed upon them here and the results are gratifying to all who have witnessed the many forms and rare species that have recently flowered. Many hybrids of excellent character were noticed, among them the pretty *M. Gelseniana* with fifteen flowers and many buds to open. This is a distinct type obtained by crossing *M. Shuttleworthii* with *M. Wagneriana*. Some superb forms of *M. chelsoni* were very conspicuous, among them specimens carrying twenty to thirty flowers. The pretty *M. xanthocorys* had fifteen flowers, and the rose flowered *M. Armini*; a number of the chimera section also added to the display including the black form known as *M. c. Koezlii*. A fine plant of the *M. radiosa* had produced a profusion of its quaint blossoms. *M. bella*, *M. Houtteana* and others were equally well flowered. All this section are placed in baskets and thrive and bloom profusely, sending their interesting flowers beneath and around the sides of the baskets, which when suspended are seen to every advantage. Chief among this group mention must be made of the superb varieties of *M. Harryana*; here they are grown to perfection and in fine specimens embracing many forms of all the conceivable shades of purple. Strong spikes in quantity were produced well above the broad green foliage, producing an effect of a very striking character.

The description of this house has often been noted in your columns, but it may be in order to mention that it is a lean-to structure facing north, the back wall being covered with sphagnum moss, over which a quantity of *selaginella* has found a home, and this is daily syringed and the moisture emitted suits the plants' requirements admirably, the bulbs being well formed and foliage of sound texture.

In the cattleya house some remarkable *cypripediums* were in bloom, enjoying a position on a side stage, thriving and rooting freely and producing growths of great size. Here are found *C. caudatum* carrying 24 of its curious and interesting flowers, many of the petals measuring from 24 to 28 inches, and by its side a superb example of the white variety known as *C. c. Wallisii*, carrying three spikes with nine handsome flowers. This variety is one of the best we have seen. A hybrid suspended from the roof was very attractive, obtained by crossing *C. Spicerianum* with *C. villosum* and named *C. Lathamianum*. A fine plant of the chaste and distinct *Godseffianum* was

well bloomed, and which has increased very much in size and the markings also are brighter than was seen in the first plants that flowered. This is still a very rare plant. The delicate flowers of *C. leucorhodium* were very fine, and the rare *C. macropterum* also proves a superb one, the plant here carried nine flowers and was much admired. Among others noticed were *C. Mrs. Canham*, purple var. *C. Williamsii*, *C. Petri*, *C. Lindley-gnum*—an interesting species and well grown here, the specimen had nine fine blooms; *C. Lawrenceanum*, though a common plant, one of the finest forms was flowering with seven blossoms of enormous size, the dorsal sepals measured three and one-half inches and the purple lines were of an exceedingly rich color. The "albino" variety *C. L. Hyennum* had two charming flowers; the purple coloring which predominates in the type is entirely absent in this variety, the dorsal sepal is white, furnished with bright green veins, the petals and lip also are light green, the latter furnished with darker venations. *Uropodium Lindenii* with its pouchlike blossoms and long tail-like petals was seen in excellent condition.

Among the cattleyas *C. Lawrenceana* was the most conspicuous. Many well flowered plants were suspended from the roof in baskets with six, seven and eight flowers on a stem, among them a valuable form named *C. L. MacFarlanei* was noticed with flowers of an intensely rich purple. A pale form and very pleasing was a variety named *C. L. rosea* with large broad-petalled flower and a soft rose colored lip. *C. maxima*, *C. Mendeli* and *C. Mossie* also were finely flowered together with the rare *C. bella cuspidata* and specimens of *Lalia purpurata* and its variety "alba," one plant had six bold spikes. A pretty form of *Oncidium Kramerii* named *lutea* was much admired, being devoid of all spots and of a soft clear yellow color. Several *Vanda* teres and its variety *Andersonii* had produced a fine show of bloom.

Many other choice and beautiful things were seen, including a number of dendrobies, epidendrums and some fine vandas and phalaenopsis which would occupy too much of your valuable space if here enumerated. There, however, will be found a most agreeable and pleasant surprise in store for all lovers of these plants who may visit this collection for several weeks hence and Mr. Robinson, the gardener here, is ever ready to show this complete collection, of which he has charge, to any one interested.

New York.

A. DIMMOCK.

Pteris.

After the maidenhaurs this extensive genus of ferns is doubtless the most useful to the florist, containing as it does, so many species and varieties that are of sufficiently hardy constitution for the various forms of decorative work.

And there being also so much variety in habit and size of growth among the pteris gives them still another advantage, while for lasting qualities when cut they have no superiors in the fern family.

Regarding culture it may be stated that no other ferns are easier to handle than these, and as they produce spores in great quantities and these germinate readily, there is usually but little difficulty in securing a stock. As is not uncommon in so prolific a family, there have been a great many variations from the different types produced among seedlings, and in

consequence almost every large grower of ferns has one or more special varieties that have originated in his own establishment, some of which may have been named more or less correctly.

Some of these variations, however, are not permanent and are therefore of little value, while others originated in the same manner are now included among our most valuable trade sorts.

Among the varieties that are of special value are several of the cretica class, of which the old and well known *P. cretica* is the type. The last named is itself a first rate fern when grown moderately light, so that the fronds are not drawn up, and firm, fully developed fronds of this species last longer in water than any other fern I know.

Of the varieties of this species *P. cretica albo-lineata*, the familiar silvery striped fronds of which are so often seen, is one of the hardest and will do well in quite a cool house, providing that water is not allowed to remain on the foliage during the dull days of winter, as in the latter case the leaves may become rusty.

P. cretica magnifica is another fine variety of garden origin, being more dwarf in habit than the type and having the tip of each pinna nicely crested. This like the preceding comes true and freely from spores, and being of rapid growth soon makes a salable plant.

Doubtless one of the best that has been introduced thus far is one of the recent novelties, *P. cretica nobilis*, to which reference has before been made in these columns. It is dwarf in habit, the fronds being almost upright, very hard and of good substance and having the tips of the pinnae very much crested. *P. cretica nobilis* was of English origin, and has been introduced on this side within the past two years.

Next to the cretica varieties in usefulness, or perhaps side by side with them, are the members of the serrulata group, beginning with *Pteris serrulata*, one of the widest known of the genus, the graceful, pendulous fronds of which are seen in almost every greenhouse in which a fern is grown.

Among the varieties of this species *P. serrulata cristata* and *P. s. corymbifera* are two of the most useful, the latter being much more dwarf and compact than the first and also more completely crested.

P. s. Dixonii is also a good variety, the pinna being narrower than that of *P. s. cristata* and more profusely crested.

The species under consideration, *P. serrulata*, has been very generous in variations and in addition to the above there are several fine varieties, among which may be included *P. s. angustata*, *P. s. variegata* and *P. s. tenuifolia*.

Some of the stronger-growing pteris should also be noted, and in this connection the first that comes to mind is *P. tremula*, a very popular fern in some sections of this country, and a remarkably handsome one too, the lively green of its fronds being very noticeable among other ferns.

A comparatively new variety of this species has been distributed under the name of *P. tremula grandiceps*, and as the varietal name indicates, the tips of the pinnae are ornamented with large crests, this making it one of the most striking novelties of this character that has been sent out of late years.

Pteris quadriaurita is also an excellent species where large plants can be used, being of rapid growth and producing very large fronds of a peculiar grayish green color.

We are also somewhat indebted to *P.*

quadriaurita for the production of so good and useful a fern as *P. argyrea*, the latter being a variety of the former, and is certainly one of the best variegated ferns in cultivation, though the fronds are somewhat brittle.

Another pretty species is *P. leptophylla*, which may be briefly described as having somewhat the appearance of a finely cut variety of *P. tremula*, but also having the edges of the pinnae deeply serrated.

P. palmata and *P. sagittifolia* are also to be classed among the useful ferns, and may be more easily recognized by some under their old name of doryopteris, the first having broad, deep green leaves that are deeply divided into five or more lobes and black, wiry looking stems. The second, *P. sagittifolia*, has entire leaves, arrow shaped and from four to six inches long. Both of these species make nice little plants in 3-inch pots and contrast well with some of the finer growing ferns.

P. rubro-nervia is also a pretty variety to mix among others and has finely cut pinnate leaves about a foot in length, the stems and midribs of which are purplish red. This, like the beautiful *P. tricolor*, is a variety of *P. aspericulis*, and probably the most useful one, as *P. tricolor* is so delicate as to be of little value to the average florist.

W. H. TAPLIN.

Growing Dutch Bulbs in America.

Can Dutch bulbs and lily of the valley be grown in this country, of as good a quality as those imported from Europe, and if so, can it be done at a profit?

This question has been considerably discussed pro and con, and at one time not long since formed a topic of discussion at a meeting of the Chicago Florist Club. It is a subject of great interest to many of our growers, and a free discussion in the *FLORIST* by members of our craft familiar with the subject undoubtedly would bear fruit. It is with this view that we venture to take up the subject. For himself the writer can claim but a very limited knowledge of bulb growing, but being always greatly interested in this class of flowers, has been a close observer of the methods pursued and the results obtained by those actively engaged in this line of business. These observations so far as they go, will be the subject of this article, confining ourselves mainly to the growing of tulips and lily of the valley.

It would seem strange indeed that in this large country with every variety of soil and climate, suitable localities could not be found where these bulbs could be cultivated to perfection. It is in a locality where we might least expect it that sometimes the best results may be obtained. This seems to be the case in northern Illinois, particularly in the vicinity of Lake Michigan. The fact that two or three of our growers in the neighborhood of Chicago have met with decided success in this line seems to prove this fact.

Mr. Geo. Klehm of the J. Klehm Nurseries at Arlington Heights, about 25 miles north of Chicago, is particularly enthusiastic in this matter. His attempts in the cultivation of bulbs, although having gone hardly beyond the experimental stage, has warranted him, by the expenditure of a considerable sum of money, in enlarging his growing capacity. The past season about one acre of ground has been devoted by this firm to the cultivation of bulbs, mainly tulips, and two-thirds of an acre to lily of the valley. The soil is a rich clay loam, having been heavily manured and cultivated in grow-

PTERIS VICTORIAE (NEW)

ing vegetables for many years. It is in excellent condition and to judge by the appearance of the stock grown in this place it seems to be well adapted for this class of bulbs.

Of tulips, on say two-thirds of an acre, about 150,000 are grown; of this number 30,000 to 35,000 will be suitable for forcing next winter although none of them will be used for this purpose as these bulbs will be grown for increase another year.

Most of the original stock was obtained by gathering up all the bulbs that could be obtained from the local growers, having been forced for winter flowers, but last year a good many of the new varieties from Holland were added. The leading varieties are the standard sorts which are largely used for forcing in this country, such as Chrysolora, Yellow Prince, La Reine, Proserpine, Kaiser Kroon, Duchess of Parma, Cottage Maid, etc.; of the newer sorts *Coleur de Cardinal*

and *Prince de Austria* showed particularly fine this spring.

Lily of the valley grown on this place looks as luxuriant as any we have ever seen in Germany. Between 200,000 and 300,000 pips are grown this season. The plants multiply very fast and it is the firm belief of Mr. Klehm that before many years he will be able to supply our local growers with a good proportion of the stock now annually imported.

However visionary this may seem we

think honestly that Mr. K's hopes are pretty well grounded. It has been demonstrated that tulips and valley can be grown here in suitable localities, which are in every way as good as European stock and well adapted for forcing. From what we have seen this past winter we are led to believe that home grown valley in particular is superior, especially for early forcing, the flowers averaging one third more in the number of bells besides being stronger and every pip throwing up good foliage.

But here is the great question: Can these bulbs be grown at a profit and can we ever hope to compete with Holland or Germany. It seems at first glance to be almost a hopeless case when we compare the difference in the cost of labor in this country and in Europe, and labor certainly is a very important part in the cultivation of bulbs. Still to our mind there are many things in our favor which ought to be duly taken into consideration, one important factor being the relative cheapness of land. We can devote three or four acres of ground to a given number of bulbs where the same number may be grown on one acre abroad, and instead of employing manual labor for hoeing and weeding we would use the horse power in cultivating. This is practiced at Klehm's nurseries, the bulbs being planted in long rows say 300 feet long and two feet between the rows. A new kind of cultivator, two horse power, is used. The machine straddles the row, thus cultivating two rows at a time. Two adjustable steel plates pass on either side of the row and serve to keep the soil from covering up the plants. By this means a large item of expense can be saved in taking care of the stock until it matures.

Speaking of cultivation it should be borne in mind that success largely depends in the maturing of the bulbs during the growing period which follows the flowering season. This can be accomplished only by the most careful tending of the soil. This brings to mind the incident which is to the point. Last summer while visiting an old nursery where tulips had been grown or rather allowed to grow for the last 30 years or more we were shown over the place and our attention called to the tulip beds, but not a sign of a tulip could we see. There appeared some solid rows of grass and weeds about a foot wide with a space of about two feet between rows which had been cultivated once or twice in the spring. By close inspection we discovered the tulips in question securely hidden in the grass. The grower on being questioned explained to us that the object of allowing the grass to grow around the bulbs was to shield them from the rays of the sun. Here were a lot of bulbs smothered in weeds and grass which absorbed every particle of nourishment and moisture of which these very bulbs stood in the most urgent need in order to perfect their growth. The results of this may readily be guessed. The proper curing and care of the stock from the time it is taken up out of the ground until it is replanted is we are very sure not fully appreciated by most growers. It is here that our friends in Holland can give us many a good pointer. In our humble opinion no man will ever grow bulbs at a profit unless he faithfully studies the methods pursued by men who for generations have made it their life study and then adapt them to the different conditions we may encounter in this country.

Chicago.

F. F. BENTLEY.

Some of the Seed Novelties.

BY WM. FALCONER.

GODETIA WHITE PEARL.—Flowers satiny white, habit dwarf and compact.

HELICHRYSUM, SILVER BALL.—A variety with large, full double, extra white flowers. These everlasting grow from seed very readily and come fairly true to variety. If the flowers are gathered before they are quite open and hung up, heads down, in small bunches in a dark but airy shed they will make beautiful immortelles for church or home decoration in winter.

IPOMEEA BRONSONI.—A perennial species from Cuba, of vigorous nature and bearing a profusion of small, white, fragrant blossoms. Easily raised from seed and blooms the first summer.

LATHYRUS MARITIMUS.—This grows abundantly along the sandy shores of Long Island and thrives in cultivation, and its flowers are large, purple and quite showy, at the same time I don't think it will ever receive much attention as a garden plant, for it hardly deserves it.

LATHYRUS LATIFOLIS ALBUS is still being pushed. Now get this plant and grow it and give it supports to climb up into and in summer it will yield you many blossoms. It is a hardy perennial and comes easily from seed, but there has been some complaint that all of the seedlings don't produce white flowers; the plants do not bloom the first year from seed. And the flowers sell well. They have almost no fragrance.

LATHYRUS SPLENDENS.—My plants (of last year's sowing) have not bloomed yet, but we get glowing accounts of the beauty of the brilliant blossoms of this pea from California. And, apparently, it is both useful and ornamental, for I am informed that a farmer in the Golden State finding that his cattle have an especial fondness for the straw of this pea had a quantity of the seed collected last year to sow for fodder for his stock.

VARIEGATED-LEAVED HONESTY (Lunaria biennis, var. fol. var.)—The purple flowered honesty is a common biennial, abundant about old gardens and somewhat coarse; the white flowering variety is far more desirable. The variegation of the leaves, not much of a claim in such a rank subject, however, is all the advantage the above variety has over the purple flowered sort. For florists' use the double flowering forms, especially the double white one, are the only ones worth growing, and they are increased by division and not from seed.

MUCUNA PANICULATA is a tropical vigorous vine of considerable beauty when in bloom. It has large panicles of bluish purple, pea flowers, and leaves not unlike those of a Lima bean plant.

MIMULUS, EMPEROR.—This is an extra large, variegated flowered, hose-in-hose or duplex variety. Although the seeds are fine as dust, they germinate evenly and come up well and in three months from sowing, if liberally treated, make good blooming plants. A pretty annual for pot culture or garden decoration, but of little use for cut flowers.

THE TOBACCOS (Nicotiana).—Among white flowered tobaccos *N. affinis* takes the lead; *N. decurrens* is only a form of *N. affinis*, and no better. *Nicotiana suaveolens* is another night blooming, fragrant, white flowering species and good in its way, but not as showy as *affinis*. As ornamental plants the "koi" varieties, for instance, *macrophylla* and *wigandoides* don't amount to very much,

they carry such a quantity of seed vessels. *Nicotiana glauca* is a species I used to grow for summer planting. It is of tall, branching habit, with rather small glaucous leaves, and at the ends of its shoots it bears lots of small yellow flowers. It has quite a look of *Eucalyptus globulus*.

NICOTIANA COLOSSIA is the most colossal of the family and a striking seed novelty. It is a native of Brazil, whence it was accidentally introduced into Europe with some orchids a few years ago. M. Godefroy, of Argenteuil, first distributed it. An American gentleman who visited France last year saw a bed of this giant tobacco plant in a private garden there, and he tells me it was one of the most striking plants he saw anywhere in any of the gardens. The plants grow to 8 or 10 or more feet high and have leaves 3 to 4 feet long by 18 to 24 inches wide. The leaves are tinted with red when young, and the veins of the old leaves retain this reddish hue.

POPPIES.—I cannot attempt to keep track of all the so-called new varieties of poppies because I can wade through my own poppy patches in June and July and pretty evenly match the new boasted sorts. The variety in form, size, fullness and coloring among our annual poppies is quite extensive and many of them are very beautiful, and instead of finding fault with our seedsmen for selecting and isolating the choicest sorts to name them, it is strange they don't do more of it. But when it comes to types of poppies, for instance the Shirley poppies or Mikado poppies, there are distinct enough lines to draw our attention and the same with species. And it is really worth 15 cents to find out about the "white" and "orange-scarlet" celandine poppies. They are not celandine poppies at all. But the newest thing in the way of poppies that I have noticed this year is Papaver Californicum. It is a somewhat small slender plant 13 to 16 inches high, with finely cut leaves and nearly flat open orange-buff flowers. I have a lot of it in bloom now from seeds sown about ten weeks ago, and in my opinion it has very little horticultural merit. A couple of years ago this little westerner nearly "got out" in another direction, but the samples of seed sent failed to germinate satisfactorily enough to yield sufficient stock.

STAR PILLOXES is the name now applied to the cuspidate section of the Drummond pillox. They are exceedingly curious flowers, so deeply and decidedly fringed and with a peculiar sharp pointed, narrow, elongated middle lobe of the petals, and now not only have we every color in these pilloxes that is presented in the ordinary varieties, but the flowers are large and the habit of the plants good.

PLATYCODON MARDISII. This is a dwarf form of *P. grandiflorum* and one of the most desirable hardy perennials of recent introduction and it is perfectly hardy. It blooms the first year from seed, and keeps in bloom a long time, and it ripens seeds very freely. Although not altogether a new plant its merits well deserve keeping it prominently before the public.

Libomias.

Small plants of an attractive character are as necessary to the adornment of our greenhouses as those of large proportions. Than the Libomias there are no better flowering plants of this class. They are of neat bushy habit, extra fine flowers and easily grown; and their flowers are showy and pleasing. The kinds most

CANE.—BY SCALLEN.

deserving of attention are two in number, *L. floribunda* and *L. Penrhosiensis*.

L. floribunda is a Brazilian shrub which seldom exceeds eighteen inches in height, and young plants are more frequently found to be from nine inches to one foot high. It branches very freely, the branches being furnished with opposite, oval, green leaves. The tubular flowers, an inch in length, bright red at the base and yellow in the upper half, develop with great freedom during the winter months. This species was introduced in 1862, and it is the only one known in gardens.

Penrhosiensis is a remarkable hybrid of *L. floribunda* and the Mexican *Sericographis Ghiesbreghtiana*. The latter plant is a well known and highly commendable winter flowering greenhouse shrub, which bears its flowers of glowing scarlet in loose panicles. The hybrid was obtained at Penrhose Castle in Wales early in the seventies. It is of somewhat stronger growth than *L. floribunda*, and it inherits all the good qualities of that parent. The leaves and flowers in form bear some general resemblance to those of *L. floribunda*, but the latter are of a reddish color and instead of being auxiliary as in the female parent they are borne in clusters something like those of the *Sericographis*. There is another distinct hybrid of the same parentage as *L. Penrhosiensis*, viz., *L. ignea*, and we have a variety of the former with variegated foliage; but although these have unquestionable merits they would prove superfluous where the other kinds were already in cultivation.

There are some interesting facts connected with the past and present names of all the plants mentioned here. Hooker and Bentham now include the former genera *Libonia* and *Sericographis* under the genus *Jacobinia*, and the compound generic title of *Sericobonia* was given to the hybrid *Libonias* by other authorities when they first appeared.

Next little specimens are obtainable in one season from cuttings. They should be propagated early in spring and grown on in pots until the weather attains a sufficient warmth to permit of their being planted outdoors. A moderately rich soil suits them best. The plants should be taken up and potted again early in autumn and wintered in a warm greenhouse. They may be cut down to within two or three inches of the soil after the flowering period, placed in heat until they break freely into growth, hardened off and afterwards treated in the same manner as plants obtained from cuttings,

LAMP.—BY NUGENT.

removing the greater portion of the old soil from the roots at planting, to form larger examples. M. BARKER.
Cambridge, Mass.

Cane and Lamp.

We present herewith illustrations of the two winning arrangements entered for the John May prize at the exhibition of the New York Florists' Club, and which were described on page 740 of our issue for May 7.

We think it but fair to all to say here that we do not indorse all of the designs illustrated in our columns as examples of artistic arrangement. We do not believe in arrangements such as the lamp illustrated in this issue and the candleabra illustrated in our issue of April 23 for the reason that the grace of the flowers is of

necessity destroyed in defining the outlines of these artificial objects. As we have drifted away from the stiff bouquets of years ago, so should we relegate to the rear any arrangement which does not permit each individual flower to give full expression to its own grace and loveliness.

Chicago.

At the last meeting of the Florist Club Mr. W. J. Smyth, with E. Weinhoeber & Co., read a very interesting paper upon the arrangement of flowers.

After modestly disclaiming ability to deal properly with so large a subject Mr. Smyth started with some excellent advice as to the necessity of presenting flowers effectively to the notice of customers in the store. He strongly condemned the practice of laying flowers in trays and held that everything that had a stem should be placed in vases. That vases of proper sizes and shapes to make the best possible display of the flowers should be provided and used and that nearly as much care should be exercised in the arrangement as if the vase was to form part of a decoration. He believed that this care in presenting the flowers to customers paid a large return and urged its great importance in stimulating sales. He said, "Have your best flowers always before the buyer's eyes and arranged loosely in vases—like earthenware the best, believing they show off the flowers to better advantage than any others. Have the vases of a suitable size—so they will not hold too many flowers, and have each bunch of roses, carnations, mignonette, etc. of a size to correspond with the size of the vase. Taking a vase which will hold say about twenty-five *Mermets*, arrange this number of flowers in the vase thus: Place your largest, longest stemmed and best roses in the center; then place those having a few buds and fresh shoots as well as good clean foliage, arranging the weaker stemmed ones on the outside to give irregularity. Let the arrangement be always loose and free from formality and be sure to give the foliage a chance to show itself. Such arrangements excite the admiration of customers and frequently result in the sale of the bunch of flowers as presented in the vase."

In this connection Mr. Smyth spoke of the importance of having the surroundings in keeping with the flowers. Everything should be in such harmony that people of refined tastes will find nothing there to jar upon their sensibilities.

"In decorating a house never place too many flowers in one vase. Use plenty of vases and but a small number of flowers in each, in preference to a few vases crowded with a large number of flowers. We will suppose we are arranging some roses in a small parlor. We will start at the mantel. On the mantel are a large mirror and a beautiful clock that can not be removed. Take a long cut glass vase that will hold six or eight American Beauties with plenty of nice foliage and good long stems, place this vase at the right of the clock and spread the roses as much as possible to give them an easy and graceful effect. At the left of the clock place a shorter vase that will hold say eighteen *Bon Silences* and arrange these also as loosely as possible. I take the roses as they are cut, place the ends of the stems together regardless of the position taken by the flowers—that is if the length of the stems does not vary too much—and tie a piece of wire around the stems close to the ends and then place the bunch in the vase. The roses fall

away into natural positions and as a result I have a very graceful bunch of Bon Silences. A few other roses may be scattered about the room in small vases, not too many in a vase.

"While the carnation does not have the grace of the rose with careful arrangement this defect can be greatly overcome. In arranging a bunch of carnations use some carnation foliage and buds mingled in between the flowers and sometimes adiantums may be added."

Mr. Smyth also touched briefly on the arrangement of funeral designs, opera and other bouquets, urging a loose, graceful arrangement in every case as against stiffness and formality.

In the discussion that followed Mr. Bentley spoke of the necessity for a greater variety and quantity of foliage than now supplied by the growers. For himself he had no use for smilax except for festooning. He considered it too stiff and harsh when cut into short pieces and used as commonly employed in arrangements of flowers. When the necessity of a more varied and larger supply of foliage was mentioned to the growers they acknowledged the demand but expressed the belief that patrons were not be willing to pay a price that would make its production profitable. The speaker claimed that this was a mistake, that the better class of flower buyers appreciated the use of foliage and were willing to pay what it was worth. As a retailer he was willing to pay an adequate price for such material feeling sure that he could use it profitably.

Matters not covered by the essayist were also brought up and discussed by various members, but as Mr. Bentley responded favorably to an invitation to read a paper at the next meeting covering these points we shall wait for that before reporting further.

It was certainly a most interesting discussion and a vote of thanks was tendered to Mr. Smyth for the able essay which paved the way for it.

A resolution urging upon Director-General Davis the appointment of James D. Reynolds, of Riverside, Ill., as Chief of the Horticultural Department of the World's Fair, in the event of his finding it necessary to present another nomination to the Board of Control and the local Directory, through the failure of the latter to confirm the present appointee, was unanimously adopted and the officers instructed to lay the same before the Director-General.

At the adjourned session of the club Mr. A. McAdams covered himself with glory by accumulating a score of 226.

The market last week was fairly active; medium and poor grades of flowers were plenty, but little if any really good stock.

The extremes in the weather—from summer heat in the morning to a freezing temperature in the afternoon—has been very trying to the growers, and roses in particular show the effects in mildewed foliage and crippled flowers. Carnations also show signs of going out, the blooms are getting small and poor.

Outdoor valley still continues plentiful and of fairly good quality. Peonies are coming in freely, especially the old red variety, and white and pink of various shades are making their appearance. These flowers come mainly from southern Illinois and Indiana.

The first Cape Jasmynes (gardenias) appeared in the market last Saturday. The flowers were shipped from Mobile, but owing to bad packing were rather poor when received.

Before bidding good-bye to the tulip for this season we can not refrain from mentioning some "parrots" cut by Chas. Northrup, of La Grange. A couple of pairs that contained some 300 of these gorgeous flowers, with stems fully two feet long, made a magnificent show.

The committee of the Directory of the World's Columbian Exposition is reported to have a bushel basketful of protests against the confirmation of the present appointee as Chief of the Bureau of Horticulture. The committee has not yet made its report to the Directory, and probably no action will be taken for a week or more.

About St. Louis.

I can not help noticing how much progress has been made in St. Louis since five years ago. The cut flower stores are equipped equally as good as those in any other large city and the flowers are equal to the flowers in Chicago.

I dropped into several stores in cog, and noted how business was being conducted and concluded that St. Louis is not so slow after all. In some places I could not hide and "Mr. Robinson" would not go. At the Jordan Floral Company for instance, I met Mrs. Jordan and that ended the Robinson. It was my privilege to see some good pieces of floral work, equal to the best. Our ex-president extended to me all the privileges of St. Louis, for which I was very thankful.

The Elstead Floral Co., of which Mr. Kehrmann is the moving spirit, had a decoration (at the Southern Hotel) of floral parlors, and when I saw man after man hugging palm after palm up stairs my curiosity prompted me to follow and I had the pleasure of seeing a very simple and unique decoration without even suggesting an improvement except that I wished the rooms were larger so that more material could have been used.

At Young Bros. they complained of being entirely used up from the rush of business for the past four months, necessitating of course a vacation at the sea side of about the same number of months.

The plants offered in the public market places must be improved upon before there is satisfaction either to the seller or the buyer. When will the time come so that growers will give their plants room to develop properly. Some of the plants looked to me as though they had been grown in the basement of a Chicago sky scraper, and that's wrong.

St. Louis and the World's Fair. The World's Fair will have an exhibit from St. Louis that will be a credit to the country. I visited the establishment of J. W. Kaufman, Esq., on Lindell avenue, where I saw a fine collection of orchids and palms, under the care of John Armsby (everybody who knows him calls him Jack), and he said that Mr. Kaufman would be delighted if he could help the World's Fair by a contribution however small.

Then I went to see Mr. D. S. Brown (gardener, Mr. Wurst). Mr. Brown is a true lover of plants. He has a plant of Caryota urens that he has raised which is now 42 feet high. I asked Mr. Brown whether he would not give this grand palm to the World's Fair, his reply was, yes, with the greatest of pleasure; a plant that is superb and unique. Mr. Brown has a magnificent collection of palms, pretty nearly complete. I espied a fine plant of Sealthia elegans over twenty feet high, but my modesty would not allow me to ask him for that also, but I

have an idea that that sealthia will be in Chicago at the proper time. Mr. Brown's collection of aroids is the best in the country, and his orchids are in splendid condition; his arides, vandas and saccolabiums are superb.

No horticulturist, and I mean horticulturist whether he grows roses or palms or radishes or oranges or water melons or Venus fly traps, can afford to go to St. Louis without visiting that great and glorious institution, Shaw's Gardens. I go without a meal to see it, if needs be, every time I go to St. Louis. It is some years since I and the other parent of the Society of American Florists were there together, and I was astonished at the great strides that have been made. I dropped in on Mr. Gurney (who everybody knows has been in his position as superintendent for the past 35 years) and found him very busy making up his report for the board of managers. I did not want to intrude on his valuable time and told him so, but we lingered a minute and then he says, "When did you hear from Smith-Botanic Smith?" I said, "I never hear from Smith any more than you do, as it is a well known fact that if ever Smith writes a letter each line is worth a farm." So I says to Mr. Gurney never mind about Smith what are you going to do for us in the World's Fair? His reply was this: "Well, we can not do very much I fear, but I'll tell you what we have here. We have the most complete collection of economic plants perhaps in the world, not even excepting Kew." So I plied Mr. Gurney and he feared nothing could be done, but after a while we visited Professor Trelease, the chief, and this is what was arrived at. The Professor said that any plants that they had in duplicate he thought could and would be spared for the World's Fair. Would not the noble Shaw endorse what has been proposed, what a monument to him it will be! I hope I shall see every plant and reverie it as much as the memory of Columbus.

Mr. Gurney told me that Mr. Trelease was beloved by everybody, and that's right.

I noticed in the beds and borders some old fashioned tulips and so asked how old they were, reply: 35 years, propagated right here. I could detect some of the aristocracy of the Dutch period, bizarres, by-blooms, flakes, sels and breeders on long stems, of all colors except blue, sweet scented as violets, lasting a month or nearly in flower, old fashioned, but substantial. Mr. Gurney told me that when he first landed in the gardens all the temporary plants that were there was one Cinnam amabile and eight geraniums with scarlet flowers. I was rather surprised to hear Mr. Gurney say geraniums of course.

By this time I had spent an hour and a half and I am sure 'twas hard for Mr. Gurney to say good night in spite of his report.

JOHN THORPE.

Buffalo.

There was a good attendance at the meeting of the Buffalo Florists' Club on Tuesday eve, 12th inst., which was held at the Tift House, pending the fitting up for occupancy of new quarters for the club.

Considerable interest was manifested in matters pertaining to the coming chrysanthemum show and a report of a committee that had been appointed to make recommendations on ways and means etc. was received. The salient points of the report which was adopted are:

IN THE TERRACE GARDENS, RICHMOND, ENGLAND.

The securing of subscriptions to a guarantee fund of not less than \$2,000, also deficiency subscriptions at same time from persons who preferred, so subscribing, to going into a guarantee fund subscription. This to be gone at directly and prizes to be spread and added to the former issued preliminary list of classes.

A special reception feature of the opening day of the show consisting of invitations, an advanced price of admission for this day and the employment of a special orchestra. All details to be carefully formulated, arranged and provided for. No person not included in special invitations will be barred from admission on that day, but a uniform rate of admission will be charged to all.

Strict enforcement of all rules by the hall committee, especially regarding the control of all exhibits. The matter of selling flowers at the show was brought up and laid on the table for one month.

The details and management of the show was given into the hands of the managing committee, with power, and also with power to add to their committee for this purpose.

The announcement that a fakir hailing from the Hub had applied for street license to peddle flowers, the doing of which has as yet not wearied the eyes of the craft here, created something of a sensation and brought out vigorous discussion and plenty of sentiment against such encroachment, and Adams, Long and Pickelman were promptly appointed a committee to get up and present a petition to our honorable mayor against the issuing of such license. They were also instructed to take any other vigorous legitimate action looking to the utter annihilation of the bean eater's intended inroads here.

J. Blauuw, of Boskoop, Holland, was present and made remarks on the condi-

tion of forcing stocks, etc. abroad, also firing a light shot at the provisions of the McKinley bill as affecting their exportations.

Fred B. Lewis, of Lockport, N. Y., was elected a member of the club.

At a recent former meeting of the club Prof. J. F. Cowell, who recently stepped from the rank of honorary member to that of an active one, briefly outlined his method of propagating chrysanthemums from single eye cuttings. He should give this to the craft through the press columns, and illustrated, it without doubt being an acquisition as a method in propagating.

A revised constitution and by-laws recently adopted, and on more strict lines on payment of dues than formerly existed, is doing the business to a nicety. The earnest members whose influence is beneficial can not bear thought of forfeiting their membership, so they pay, and the club becomes relieved of carrying along dead wood membership to no purpose, as they are soon dropped from the list in case of non-payment of dues. An additional office of financial secretary was also created, his duty including all receiving of money, drawing orders and notifying members of meetings.

J. W. Constantine has notably grown beyond his former sobriquet of the "amateur member" by showing up a very large lot of carnation blooms. Thousands and thousands have found their way recently from his houses at Hamburg to the retailers' counters in the city.

The visit of our former townsman, the Hon. Grover Cleveland, to this city this week called forth some effects in decorating. Christensen held sway in Music Hall on Monday when the G. Y. M. A. gave an entertainment in honor of the city's guest. The stage was decorated

with plants and the front of the boxes festooned with smilax and flowers.

At the citizens' dinner of 150 plates, given in his honor the same evening at the Hotel Iroquois, Long furnished the decorations, consisting simply of plateau baskets filled mostly with roses, while a large quantity of smilax was used on the tables in addition. E. J. Buxton, of the Black Rock District, decorated the new headquarters of the Cleveland Democracy on Washington street, which were formally opened by a reception on Tuesday evening.

L. B. D.

Boston.

The cut flower trade is dull, very dull for the season. This is evident from the large quantities on the street every morning looking for a purchaser at any price and the great heaps of rose buds and carnations displayed all along the sidewalks in the most frequented streets every evening by the swarms of street fakirs, as well as from the very general complaints of the retailers. Outdoor lilacs and lily of the valley are now in full blast, but tulips and daffodils are gone.

The general depression in the business does not extend however to the spring plant trade judging by the crowds that frequent the auction rooms and the prices that are obtained for really good and desirable plants. Six to ten cents for common geraniums and fifteen to twenty-five cents for the newer kinds does not sound much like "ruinous auction prices." Hydrangeas in bloom are also selling well and there seems almost no limit to the number that can be disposed of.

The long delayed and much needed rain has come at last, giving the parched lawns and stunted looking shrubbery a new lease of life and putting an end, it is

to be hoped, to the longest dry spell on record for this time of the year.

The Village Improvement Society of the town of Winchester, a suburb of Boston, has inaugurated the very commendable practice of distributing to the school children flower seeds and bulbs, with the offer of certain premiums to those who excel in the culture of the same. The children have entered into the scheme with great enthusiasm and the general introduction of the plan throughout the country would undoubtedly result in a great benefit to the seed and plant trade. Try.

W. J. S.

Correction

ED. AM. FLORIST:—Permit me in justice to Mr. W. S. Allen to correct a slight error in issue of May 7, in reference to the prize for corsage bouquets at N. Y. C. Club's exhibition. My prize, a silvercup, was offered for two best bridesmaid's bouquets, which was also awarded to Mr. R. A. Merritt, but the prize for corsages, etc. was offered by Mr. W. S. Allen. New York, May 11. Ed. C. HOKAN.

[A correction touching the same matter was received from Mr. John Young in time for last issue and further correction is hardly necessary. Of course Mr. HOKAN did not know this when his note was penned and as the disclaimer of undue credit comes most gracefully from him we give it space.—Ed.]

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advts. not admitted under this head.

SITUATION WANTED—Experienced in all greenhouse work, 3 years' single. Address: CHAS. K. care American Florist.

SITUATION WANTED—By a German cut flower grower. Rose specialty. Single. Good references. Full particulars. T. S. ANDERSON, Florist.

SITUATION WANTED—By a man of 30; good grower of carnations, chrysanthemums, etc. Would like to work on shares. Address: N. J. care American Florist, Chicago.

SITUATION WANTED—By lady who has had some experience, a situation to assist in cut flower work for city trade. Address: HORTON, care American Florist, Chicago.

SITUATION WANTED—By an Englishman, single, 8 years 10 years as manager or foreman, can furnish the best of references. Address: R. C. care Wm. J. Stewart, 67 Bromfield St., Boston.

SITUATION WANTED—By single man, 10 years' experience in the greenhouse business. Speaks French and German, but little English. Address: GARFIELD PARK ROSE CO., 138 Madison St., Chicago.

SITUATION WANTED—By a thorough, practical S. man as head gardener or manager of a large estate or commercial place, experienced in all branches of the art, particularly qualified in roses, fuchsias, carnations, clematis, delphiniums, and landscape gardening. Unexcelled in orchid culture. A successful hybridizer. Wide knowledge of vegetable and crane culture. Only a first class place. Married, small family. 20 years' experience. No 1 references. Address: C. L. S. care American Florist, General Delivery, Pittsburgh, Pa.

WANTED—A good sober, single florist, good rose grower, to take charge of place. Address: A. H. BAKER, New Centre, Ill.

WANTED—Foreman for commercial greenhouses. Good man. Address: S. VAN NELSON & SON, 275 North Paulina St., Chicago.

WANTED—To rent 4 or 6 greenhouses in or near Chicago, with or without stock. Address: T. G. care American Florist, Chicago.

WANTED—Two men who understand general greenhouse work, steady job for right men. Address: P. B. care American Florist.

WANTED—Information of Michael Wilmut by his brother P. Wilmut. Address: R. B. BAKER, 1111 Stratford P. O., Chester Co., Pa.

WANTED—A florist who thoroughly understands roses and who is well up in floral work. Address with ref. checks. G. VAS BOCHINSKY & BRO., Kalamazoo, Mich.

WANTED—A good greenhouse worker; must understand the business; must be sober and industrious—single preferred. Good position and would place to the right man. S. S. S. care American Florist, Chicago. D. B. WOODRUFF, Macon, Ga.

WANTED—Immediately, man to take charge of greenhouse. Must be sober, industrious and well acquainted with all branches of the floral business. None but good men need apply. Write giving references to ASHLERST FLORAL CO., Aberdeen, Nova Scotia.

WANTED—Man for 2 years or more. Must be steady and understand forcing roses, carnations and all winter blooming bulbs. Cash board with owner. State salary wanted by the year and references. A nice place for a good man about June 15th. Address: J. H. BOY, care American Florist.

WANTED—To loan several hundred dollars in the florist business with security and interest. By a respectable lady with good business qualifications, where she could be employed as saleslady with fair salary, or would take charge of branch store. Best of reference given. Address: A. A. 3102 Olive street, St. Louis, Mo.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Monday to secure insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

A SAMPLE of the "Perfection plant label" has been sent us by the manufacturers, Messrs. M. & R. O'Brien, Pittsburg, Pa. It consists of a short bar of malleable metal which can be used either as a standard or a hanger, a place being provided for the holding in a horizontal position of a heavy white glass label with the name printed on and apparently baked into the glass. It is a very handsome appearing label and the materials are such that it can be produced in large quantities at a moderate expense. This label will be very useful, especially in conservatories.

WE ARE much pleased to note the largely increased number of growers who are keeping accurate records of blooms cut from a given space and number of plants. We hope that the number will be still further increased, and that soon at least the majority will be guided in their future operations by actual records of past accomplishments instead of guesswork.

SOME BLOOMS of his new carnation Mme. Cusin are sent us by Mr. John Mcowan, Orange, N. J. The name is evidently given it on account of the resemblance in coloring to the rose of the same name, though the carnation is flaked as well as margined with carmine. It is certainly a very pretty flower.

MR. H. W. BUCKBEE and wife, of Rockford, Ill., are visiting in Los Angeles, Cal., and took a very active part in the recent great rose festival held there. The Los Angeles daily papers speak in eulogistic terms of the assistance given the management of the affair by both Mr. Buckbee and his wife.

SOME specimen blooms of the new white petunia Mrs. Harrison have been sent us by Wilson Bros., Springfield, O. They are of large size, very double, deeply fringed, white with a slight tinge of purple on the edges. The flowers are very effective.

SPECIMENS of *Spiraea astilboides* and *S. japonica grandiflora*, for which they were awarded a silver medal at the May exhibition of the Massachusetts Horticultural Society, are sent us by Messrs. Rea Bros., Norwood, Mass.

THE Minneapolis Florists' Club has issued a schedule of prizes for its chrysanthemum show, November 10 to 13 next. Copies may be had on application to the secretary, Mr. E. Nagel.

SOME pansies of good size and very rich colors, especially the purples, are sent us by Mr. I. P. Sorenson, gardener to F. R. Hawkins, Mountainville, N. Y.

WE ACKNOWLEDGE the receipt of a copy of the transactions of the Worcester County Horticultural Society for 1890-91 from the secretary, Mr. Edward W. Lincoln, Worcester, Mass.

WE HAVE received from Mr. J. B. Heiss, Dayton, O., a bloom cut from a sport from the La France rose which seems to be identical with Duchess of Albany.

SOME flowers of seedling cannas raised by Mr. A. Peley, Fort Lee, N. J., are sent us by that gentleman. They are of good form and colors.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

News Notes.

H. P. JENSEN, assignee, St. Paul, Minn., advertises to sell to the highest bidder, June 10, the stock of A. S. Swanson, insolvent.

UTICA, N. Y.—At the meeting of the Utica Florists' Club held May 13 it was decided to hold the second annual chrysanthemum show November 11 to 13. A list of prizes will be offered.

WM. HORLACIER, of Junction City, and Margrave & Ward, of Hiawatha, Kan., met with a small loss by hail on the 2nd of May. Both are insured in the Florists' Hail Association.

TUCKAHOE, N. Y.—The greenhouses of John P. Shelley were destroyed by fire the morning of May 7. Loss on stock and structures estimated at \$15,000, insurance only \$1,700. He announces that he will continue business as usual and will fill all orders that were not shipped before the fire occurred.

TOLEDO, O.—The remains of the late Thomas Temple, who was drowned October 23 last while yachting, were recovered May 7. Though the body was much decomposed the features were recognizable. The shock of the sad accident last October has been revived by the recovery of the body and his family have the heartfelt sympathy of their numerous friends both in and out of the trade.

CINCINNATI.—The 31st regular monthly meeting of the Cincinnati Florists' Society was called for Saturday eve, May 9, at Parlor A. Burnett House, but owing to the rush of business on the market there was not a quorum present. Cut flowers at present are very cheap and the supply is far in excess of the demand; our retail florists here are not crowded with work. The orchid display of F. T. McFadden at Rosebank is certainly very fine, one of the specialties being a pure white cattleya which is certainly very beautiful.

MONTREAL.—At the meeting of the Montreal Gardeners' and Florists' Club held on the 12th inst. it was decided to offer for competition at the next chrysanthemum show a silver challenge cup open to all competitors. The conditions will be published later. The show will be held in the Windsor Hall, November 11 and 12 next. Several of the boys are trying their hand at growing specimen blooms this year so competition promises to be good. J. Doyle showed a plant of *Gloriosa* bearing about 40 buds and blooms. The blooms were of fine size and quality. He has several other varieties in bloom at present. The report from the late spring exhibition showed a balance of \$133.05. Weather has been very cold and everything late in consequence.

Coming Exhibitions.

June 6, Boston.—Rhododendron show Mass. Hort. Society.

June 23-24, Boston.—Rose and strawberry exhibition Mass. Hort. Society.

June 29, Hamilton, Ont.—Rose show Gardeners' and Florists' Club of Hamilton.

September 1-4, Boston.—Annual exhibition of plants and flowers Mass. Hort. Society.

September 2-3, Galt, Ont.—Fall exhibition Galt Horticultural Society.

September 15-17, Boston.—Annual exhibition of fruits and vegetables, Mass. Hort. Society.

November 2-8, New York.—Chrysanthemum show Madison Square Garden.

November 3-6, Boston.—Chrysanthemum show Mass. Hort. Society.

November 3-6, Milwaukee, Wis.—Chrysanthemum show Wisconsin Florists' and Gardeners' Club.

November 5-11, Bay City, Mich.—Chrysanthemum show Bay County Hort. Society.

November 10-12, Pittsburg—Chrysanthemum show Pittsburg and Allegheny Florists' and Gardeners' Club.

November 10-12, Newport, R. I.—Chrysanthemum exhibition Newport Horticultural Society.

November 10-13, Philadelphia.—Chrysanthemum show Penna. Hort. Society.

November 10-13, Chicago.—Fall exhibition Horticultural Society of Chicago.

November 10-13, Minneapolis, Minn.—Chrysanthemum show Minneapolis Florists' Club.

November 10-14, Indianapolis.—Chrysanthemum show Society of Indiana Florists.

November 11-12, Worcester, Mass.—Chrysanthemum show Worcester County Hort. Society.

November 11-12, Galt, Ont.—Chrysanthemum show Galt Hort. Society.

November 11-12, Montreal.—Chrysanthemum show Montreal Gardeners' and Florists' Club.

November 11-13, Springfield, Mass.—Chrysanthemum show Hampden County Hort. Society.

November —, New Orleans, La.—Chrysanthemum show New Orleans Horticultural Society.

November —, Buffalo.—Chrysanthemum show Buffalo Florists' Club.

November —, Washington, D. C.—Chrysanthemum show Washington Florists' Club.

November —, Providence, R. I.—Chrysanthemum show Rhode Island Hort. Society.

November —, Baltimore.—Fall exhibition and chrysanthemum show Gardeners' Club of Baltimore.

November —, London, Ont.—Chrysanthemum exhibition Forest City Florists' and Gardeners' Society.

November —, Utica, N. Y.—Fall exhibition Utica Florists' Club.

Something for the State V.-P's to do.

ED. AM. FLORIST.—Your suggestion that the Society of American Florists print in its annual report a list of all the clubs and secretaries' addresses is, I think, a very valuable one. Such a list, published annually, would be very useful, and I hope the matter will not be overlooked. Each State vice-president could supply the necessary information at the Toronto meeting. Let him write it down and hand it to the secretary and the gathering of the necessary data would be no trouble or expense to the society. J. B.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

THE NINTH annual meeting of the American Seed Trade Association will convene in Cincinnati, O., on Tuesday, June 9. For particulars, R. R. and hotel rates, write Secretary Jno. Fottler, South Market street, Boston, Mass.

PHILADELPHIA.—Hatton Lake, a formerly well known florist, was laid to rest May 14.

WORCESTER, MASS.—The eighth annual chrysanthemum show of the Worcester County Horticultural Society will be held November 11 and 12 next.

FT. WORTH, TEXAS.—Easter trade here was about 20 per cent better than last year. The stock of flowers was heavier and of better quality than ever before. Harrisii were especially fine.

COLUMBUS, IND.—Mr. Simon Humfeld, now at Cochran, Ind., will remove to this place this summer. His new plant will be devoted to the growing of cut flowers and hardy stuff for catalogue trade.

GERMANTOWN, PA.—At the meeting of the Germantown Horticultural Society held May 14 Mr. Thomas Meehan gave an interesting talk on color and fragrance of flowers and plants. He stated that there were about 100,000 varieties of plants having names and out of that number there were about 10,000 of them having no odor or color nor any particular attractiveness. After Mr. Meehan's address the question of adopting Mr. Woltemate's proposition to hold a chrysanthemum show the coming fall under the auspices of the society was brought up, the time and place to be decided later by the society, he to bear the expense and receive all receipts, if any. He also presented a list of premiums to be offered for the best plants, etc. After considerable discussion the proposition was adopted by a unanimous vote.

SAN FRANCISCO.—The annual flower show of the California State Floral Society held May 6 to 8 was very successful, the display being large and varied. The awards were as follows: Timothy Hopkins—Best and largest collection of cut flowers, a silver cup; best collection of flowering plants, silver medal. Mrs. W. H. Smythe—Best and largest amateur collection of cut flowers, a silver cup; best amateur collection of pelargoniums, \$3. California Nursery Company—Best collection of cut roses, silver medal. H. T. Greenough—Best amateur collection of cut roses, silver medal. H. Yoshuke—Japanese novelties, special premium of silver medal. Warren Cheney—Second best collection of cut roses, bronze medal. Mrs. E. T. Crane—Best collection of pansies, bronze medal; second best collection of pelargoniums, \$2. John Rock—Best collection of pelargoniums, \$5. Mrs. Vestry—Best collection of wild flowers, \$10. Mrs. C. Hohweiser—Best collection of plants, \$25. Mrs. L. O. Hodgkins—For her fine display, \$15. Certificates were awarded to C. Pagh, Mrs. C. Fish, T. C. Hodgkins, Mrs. G. C. Ross, Mrs. R. Townsend and the California Nursery Company for their fine displays.

Philadelphia.

Business has held out fairly well, stocks of bedding plants are being reduced, while in the cut flower line there are not enough fine roses to go around.

Brunners, Laitings and Jacqs are about all cut out, carnations are plenty and sell well.

The Philadelphia Immortelle Design Co. have erected a three story building at No. 725 Arch street. They outgrew their old quarters, No. 904 Filbert street, and will now have abundant space for their increasing business. The first floor is occupied with office and show rooms, the second is the work shop and the third is filled with stock of all kinds. Mr. Kice, the manager of the company, is an enterprising and pushing young man and under his guidance the company is bound to succeed.

Messrs. Harris, Craig, Lonsdale and Burton held a sale of plants at Young's auction rooms in New York Tuesday, 12th inst. Most of the stock brought good prices.

We do not have an auction house in Phila? Referred to Phila. growers.

Mr. Wm. K. Harris has commenced work on his new plant. He has secured a plot of ground, about seven acres, four squares back of his present location, and will erect this season three houses 20x100 and one 28x100; this latter is for palms and is to be a model of its kind.

Bowling is still the favorite amusement. A gold medal has been struck and offered as a prize for the best average made on the club alleys in three games; this is to be rolled for once a month, and the member winning it the greatest number of times in the year is the owner and champion for that year. George Anderson holds the medal for May, he having made an average of 164½ at the first match, Monday May 11. U.

Having now permanently removed from the Wm. C. Wilson greenhouses to our New Greenhouses opposite St. Michael's Cemetery (a short distance above the old place), we find ourselves with more stock than we can take care of, and would especially mention:

CAMELIAS, from 4 to 8 feet high.

DRACÆNA INDIVISA, in flats, for planting out

HYDRANGEA OTAKSA, 3 to 5-inch pots.

LATANIA BORDICANA, 4-inch pots.

ADIANTUM CUNEATUM, 3 to 5-inch pots.

Also a full line of SPRING STOCK.

Send list of what you need and we will give you prices. P. O. Address.

HOW CAN YOU GET ALONG WITHOUT OUR TRADE DIRECTORY?
AMERICAN FLORIST CO., 64 La Salle St., CHICAGO.

A Cactus Society.

EDITOR AMERICAN FLORIST.—The article in the issue of March 26 in the AMERICAN FLORIST in reference to the display of cacti by Mr. Blanc, of Philadelphia, at the spring show of the Pennsylvania Horticultural Society was read with special interest by the members of our society, viz.: "The Baltimore Cactus Society of Baltimore city." This is, to the best of our knowledge, the only society of its kind in the United States. The object is the cultivation of the cacti, and we must say that our efforts thus far have been crowned with success—they far exceeded our expectations. We organized with a membership of 8 in November, 1889, and in April of 1890 were incorporated by the Maryland legislature through the special efforts of the Hon. Theo. B. Fox, Rep. of the Second Legislative District of the state of Maryland. Since then our membership has increased to 28 active and 8 honorary members, which is composed of some of the representative business men of our city including several florists, who have taken up this "hobby," the collecting and cultivating of this rare and beautiful plant, and a few of them have indeed a collection of which they can well be proud. The interest in the community is gradually growing, and the "fever" now seems to attack the gentler sex as well as our brother "cacto-maniacs."

We are banded together as a society for the purpose of promoting the interest in this plant; we will be pleased to communicate with anyone who is interested in its culture and will answer any interogatories regarding them that lie in our power by communicating with our secretary, Mr. Fred W. Lantz, 112 N. Poppleton street, Baltimore, Md. We hold regular monthly meetings, which are well attended, and great interest is manifested by all in subjects brought up for discussion among the members for the promotion of knowledge in the cultivating of this plant and will if agreeable occasionally send items for publication in your valuable paper concerning our meetings and new and interesting points discovered in the cultivation of the plant in which we are so earnestly interested.

"SUTCA."

Just Published. NEW BOOK ON MUSHROOMS.

By WM. FALCONER.

Florists will hail this publication as a boon—there having been no exhaustive treatise specially applicable to their wants heretofore. Having made special arrangements with the publishers of this valuable work we are enabled to offer it at the reduced price of \$1.35 per copy post free to any address in the United States or Canada. We have still a few hundred copies of Mr. Robinson's work on "MUSHROOM CULTURE" left; 50 cents per copy postpaid. Our own little book "MUSHROOMS FOR THE MILLION", 16 pages, you can have free for the asking. Book your orders now for Gardiner's Imported Mushroom Spawn for August delivery—the first of next season's consignments arrives then.

We are also offering at present remarkable values on White Romans, Von Sions, Harrisii, etc., for August delivery. Send for our prices before buying elsewhere. Harrisii grown from our stock the past season were acknowledged to be the "finest ever exhibited in Philadelphia." Don't fool with poor stock. Our Fancy strain of Chinese Primrose should interest you about this time. \$3.50 per 1000 seeds; 50 cts. per 100. A full line of all kinds of Choice Flower Seeds specially selected for florists' use. Mention American Florist.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1½-inch.	3,000	250 lbs.
2-inch.	2,400	250 "
2½-inch.	1,750	250 "
3-inch.	1,400	250 "
3½-inch.	1,200	300 "
4-inch.	800	300 "
4½-inch.	600	300 "

It will be seen at a glance, that our pots are one-third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **SEND FOR PRICES.**

One Way of Advertising.

A correspondent in a western city sends us an adv. clipped from a local daily with some humorous comments on same. It is an adv. "cottoned up by one of our wide awake florists," says our correspondent, "and should be noticed as a modern way of doing things."

In one corner of the adv.—which occupies a large space—appears the portrait of the advertiser and at the side of it in large display type the lines

"DO YOU CATCH ON?"
"TO THIS UGLY MUG,"
"TIS BLANK, THE FLORIST."

This chaste and pleasing way of attracting attention will probably appeal with considerable force to people of refinement, who are the large buyers of plants and flowers.

Then follows the statement that he is the only florist in the place who "makes a specialty of the home trade," and an insinuation that his competitors send all their best plants away and sell to local customers the culls.

But toward the last of the adv. appears a few really good lines. They are as follows:

WHAT WE DO:

We sell plants, bulbs, cut flowers, funeral designs, garden seeds, fill vases, plant flower beds, do everything in the floral line.

We consider this clear, terse statement very effective in an advertisement at this season.

FLORISTS. NURSERYMEN AND SEEDMEN WANT

WIND MILLS
THE HALLADAY MILL
is acknowledged the Standard Wind Mill of the World, and is made in England, Scotland, America, France, Germany, Italy, Spain, Portugal, Greece, Russia, and all other countries. It is adapted to pumping water for Stock and Dairy Farms, Irrigation and Village Water Supply and Fire Protection, Railways, Water Stations, Factories, Breweries, etc.

THE HALLADAY is made upon a plan and guaranteed **The Most Powerful, Durable and Best Regulated and Non-Heating Wind Mill** on the market.

U. S. SOLID WHEEL
And STANDARD VANELESS
WIND MILLS
These Mills are guaranteed the BEST in their class, and are made of heavy iron and strong in construction. They are rapidly taking the lead of all Solid and Vaneless Mills on the market.

PUMPS
We make a complete line of **WIND MILL, HAND and POWER PUMPS, Iron, Brass and Brass-Lined CYLINDERS** Our Heavy Force Pumps have no equal.

TANKS
We make the largest assortment of Tanks on the market, consisting of Round, Half Round and Square Steel Tanks, Milk Cooling Tanks, Stove and House Tanks. All of our tanks made to order.

HALLADAY STANDARD GEARED WIND MILL in all sizes, 1 1/2 to 40 horse power. All Goods Guaranteed. Reliable Agents Wanted in all unoccupied Territory.
U. S. WIND ENGINE & PUMP CO.
BATAVIA, ILLINOIS, U. S. A.
BRANCHES: Boston, Mass.; Fort Worth, Texas.
DEPOTS: Boston, Mass.; Fort Worth, Texas.

HALES' MOLE TRAP
For destroying ground moles in lawns, parks, gardens and country. The only PERFECT mole trap in existence. Guaranteed to catch moles where all other traps fail. Sold by Grocers, Fruitmen, Agricultural Implement and Hardware dealers, or sent by express on receipt of \$2.00 from H. W. HALES, RIDGEWOOD, N. J.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL INSECTIGIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes—Half-a-Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-pint of the Fir-Tree Oil to two or four gallons of water, or two or three table-spoons to the pint.

For Red Spider and Caterpillar—Half-a-pint of the Fir-Tree Oil to two gallons of water, or three table-spoons to the pint.

For Money Bug, Brown or White Scale—Half-a-Pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoons to the pint.

For Mistle and Blight on Fruit or Foliage—Half-a-pint of the Fir-Tree Oil to a gallon of water, or six table-spoons to the pint.

Use with warm water it is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied in Wood, Tin or Pot Vessels.—Galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ring-worm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

Sold in Bottles and Tins.

EVERY MEMBER of the S. A. F. (this means you) in the state of Illinois, Missouri, Wisconsin, Iowa, Kansas, Minnesota, Nebraska and Colorado should personally request his railroad agent to write at once to the passenger agent of his railroad at Chicago, urging him on behalf of your railroad at the next meeting of the Western Passenger Association to vote for reduced excursion rates to the Society of American Florists, for their annual meeting at Toronto, August 18-21, next. See your agent at once and use all your influence to have this letter written to Chicago.

A Famous Massachusetts Garden.

At Milton, one of the pleasant suburbs of Boston, we find the well known homes of Nathaniel T. Kidder, Esq., and his expert gardener, Mr. William Martin.

Mr. Kidder is one of the most enthusiastic patrons of horticulture in this part of the country, as a visit to his Milton estate (where, by the way, horticulturists are always warmly welcomed) will most amply testify. We had the pleasure of a visit one day in the latter part of March.

The estate is small, but stocked to its fullest capacity with material pertaining to our craft. Choice shrubs and hardy herbaceous perennials, to both of which Mr. Kidder devotes ardent attention, abound in the grounds, and the extensive ranges of glass are well filled with the choicest of ornamental exotics. At the time of our visit there were but few flowers in the outer garden to gladden the eye, nothing, in fact, but occasional clumps of snowdrops, crocuses and the winter aconite. But Mr. Martin pointed, with ill-disguised pride, to some preparations in progress, with a view to the formation of a rock garden and the extension of the plantations of herbaceous perennials, which would cheer the heart of any lover of hardy flowers.

On entering the greenhouses we were much impressed with the order and cleanliness perceptible in every department. Much of Mr. Martin's success as a cultivator must doubtless be attributed to the rigid observance of these first elements of good gardening. The plants displayed a wealth of luxuriance which could not have prevailed had opposite conditions obtained a footing.

Stove plants are grown extensively, and they include some very good examples of dracaenas and crotons. Particularly noticeable among the dracaenas were *D. Massangeana*, *D. Butlerii*, *D. Youngii*, *D. amabilis*, *D. Baptistii*, *D. Mooreana* and *D. Goldiana*, all first-class sorts. The last-named plant bore a dense terminal cluster of flowers, something rather unusual. The variegated form of *Ficus elastica* has here been found an extremely useful plant for decorative purposes, as has *Ananas sativa variegata* (the variegated Pine Apple), and *A. Porterae*. *Phyllanthus Lindenii* was another highly ornamental plant which we saw in good condition. The collection of ferns is very rich, especially in adiantums, and we noted a fine specimen of the elegant *Davallia Mooreana*. Referring to the recent discussion in English journals, as to the alleged poisonous or irritating character of this *davallia*, Mr. Martin said he has grown the plant for many years and in handling it has never experienced the smart sensation of pain. A rather pleasing effect is obtained by planting another fern, *Nephrolepis cordifolia*, on the back wall of a corridor which connects two of the

houses. The drooping fronds clothe it with a light and elegant covering of living loveliness.

The orchids are numerous, and that their requirements are fully understood is well borne out by the healthy condition in which we found them. A splendid batch of *calanthes*, judging from their pseudo-bulbs, had just passed their flowering stage, and several exceptionally meritorious varieties of *Lycaste Skinneri* were full of bloom. *Cypripedium insigne* was represented by a grand plant, one which had borne as many as 111 flowers; *C. barbatum Warnerianum*, *C. hirsutissimum* and *C. villosum* were also very attractive. The most conspicuous dendrobiums were *D. Farmeri*, *D. nobile*, *D. Wardianum*, *D. Lowii* and *D. primum*, the first-named being a very pretty specimen. Several pieces of the orchid-like *Utricularia montana*, grown in baskets containing a mixture of sphagnum, peat and crocks, presented a vigorous appearance, and promised to flower freely at an early date.

An intermediate house contained some good hybrid roses and a host of other useful flowering plants, among which we observed *Statice Halfordii*, *Eupatorium ianthinum* and *Agathaea caelestis* (the blue Marguerite) as being unusually desirable and not often met with.

Still more important was the brilliant effect afforded by a large variety of plants in a somewhat cooler house. The gay appearance of this structure was due to the preponderance of well grown azaleas and camellias, cinerarias and cyclamens. Some East Lothian stocks in pots demonstrated the immense utility of these plants for early flowers. The seeds for these had been sown in spring; the plants transferred to the open ground when large enough and taken up and potted early in fall. Here also were such eminently useful plants as *Eriostemon nerifolium*, *Erica Caffra*, *Polygala cordifolia*, *Boronia megastigma*, *Coronilla glauca*, *Grevillea Thelemanniana*, *Haloragchum elegans*, *Chaenostoma hispida* (a compact, bushy little plant with numberless white flowers), *Eurya Latifolia*, *Coprosma Baueriana*, the delightful *Mahernia odorata*, *Spartium junceaum* (Spanish Broom), *Ulex europaeus* (European furze) and *Aphelaxis macrantha* purpurea. All these plants may be depended upon to give a large amount of satisfaction under ordinary greenhouse treatment. It is a rare occurrence now to see a plant of the genus *aphelaxis*. Grand specimens of the New Holland species (by far the most decorative) used to be exhibited at the shows in London and other cities of England, together with equally good examples of *erica*, *pinella*, *dracophyllum*, *episcagnidia*, *aotus*, *genetyllis*, etc., as late as ten or twelve years ago. Alas! The fine old hard-wooded plants have sunk down to a very small circle in the ever-whirling

vortex of fashion. But they will rise again in the deep waters beyond, as the hardy herbaceous plants have done in recent years, and sail proudly in their old haunts and on many a wide new sea. They could be grown to the highest pitch of perfection with one-third the expenditure of time and money now lavished upon orchids. Here is a field with a fortune in it for some wide-awake florist. It was the renowned Josh Billings, I believe, who on being applied to for his autograph, added his signature to the following couplet, quoting the first line from the immortal Bard of Avon:

Thrice is he armed that gets his quarrel just,
And four times he that gets his blow in first.

The first in the field may not always win, but they generally have some advantage over those who arrive later.

Mr. Martin is a very successful exhibitor, scarcely an exhibition of the Massachusetts Horticultural Society passing in which he does not manage to secure some much-coveted trophy for plants, fruits or flowers. Those who visited the show and during convention week of last year do not require to be told of this. The group of plants exhibited on that occasion is not likely to be ever forgotten by those who had the privilege of seeing it. Such results were not obtained by any haphazard system. Earnest forethought and persistent watchfulness were clearly written on every leaf, and it is only by the exercise of these and the assistance and sympathy of such generous employers as Mr. Kidder that success may be achieved.

Cambridge, Mass. M. BARKER.

Practical Greenhouses.

By J. L. DILLON.

[Read before the Florists' Club of Philadelphia at the May meeting.]

"Unacquainted as I am with the papers that have been read before the club, it is with some reluctance, that I choose a subject to entertain you with this evening. No doubt the various plants I grow have been treated and discussed by able penmen than myself; I therefore conclude to select for my subject "Practical Greenhouses."

The successful florist's places (growers, I mean) are, as a general thing, situated widely apart, in favorable localities, and managed by men who give them their whole time and attention, and make them their hobby. These places are often at a distance from a railroad station, or in out of the way places, which make it impracticable to visit them, unless at considerable expense of time and money. The little I may have to say, I hope may bring out discussion, and descriptions of many of these places, which will be of benefit to us all.

In building greenhouses the first consideration is the location. On this will largely depend the work, and cost of building, and in many instances the profits of after years. After many years' experience we would choose a hillside, sloping to the south, with a pitch of 12° to 16°. We would build the houses three-quarter span, 23 feet wide, and when practicable, about 200 feet long. To prevent shading the front benches, the houses should be ten feet apart, which space can be used for a drive-way, or can be covered with glass, and will make a fine house for propagating, or for growing violets, dormant roses and pot plants of all kinds. With a pitch of 20° the houses could be joined together, and no damage would occur from shading.

By sinking the front walk a few inches, and filling up the back walk, we can have

all walks on the solid ground, thereby doing away with the expensive staging, which we have often found dangerous in walking away from the rotting out of the boards and sills. In case of fire these stagings must be regular tinder boxes, often, no doubt, being the means whereby greenhouses are destroyed, whereas, had they not been in use the houses could have been saved.

For growing cut flowers, make the side benches 3 feet wide, walks 2 feet and the middle bench 11 feet, with a walk 1 foot wide in the center. Make raised benches on the sides and the center, which can be made solid or raised, as desired. We make the lower half of the middle bench solid and the upper half raised except where we have the cistern, which we will describe later. Give the house lengthwise a slight fall, say 12 inches to the 100 feet. This will carry off the water in the gutters and walks, and the steam or hot-water pipes can be run through then at an equal distance from the glass and will make the necessary fall, insuring quick circulation. We have in each of our houses, at the lowest end, a reservoir or cistern, into which we conduct the rain-water off of the houses. We make them 8 feet wide at the top, 5 feet wide at the bottom, 5 feet deep and 30 feet long, holding when full 7,300 gallons. In making these cisterns we dig them out, then remove the soft surface ground from around the edges down to where it is solid and on this solid ground we build a concrete wall 10 inches thick, the height required all around, on which we lay our sills for benches. We now give the solid ground (which is often very rough) a coat of cement, composed of one part Portland cement and four parts sand. This is used to fill up the holes and smooth the uneven places. When dry we give the whole inside of the cistern a coat, composed of one-third Portland cement and two-thirds sharp sand. If properly put on there is little danger of the cistern leaking; should such be the case the leaks can be found and easily repaired by enlarging the hole or crack and filling with cement.

From these cisterns we always get pure water for our boilers, saving the disastrous effect of scale, moderately warm water for our roses and other flowers in the winter time and one of them we have turned into a liquid fertilizing tank, using in it in solution nitrate of soda, sulphate of ammonia, sulphate of potash and liquid manure.

Posts (locust if possible) with the part that goes into the ground charred are set 5½ feet apart, against which are nailed boards planed on the inside and painted white, next tarred felt paper, covered and finished with German siding on the outside. For gutter plates we use 10x2½ inch yellow pine plank for bottom, with side strips 2x2½ inches, placed edgewise, kept well painted, and they will out-last two that have been tinned.

To prevent shading as much as possible, we use sash sticks 1½x2 inches, having grooves on the sides to carry off the water; those on the south side 10 feet long, on the north side 7½ feet. In addition to the ridge-board use two pur-lins the length of the house, to support the long sash sticks, size 2½x3½ inches, beveled for the sash sticks to lay on. By placing them 6 feet 4 inches apart, and the same distance from the gutter-plate and ridge-plate, we will have the tops of the upright supports, which we place 8 feet apart, on the upper side of our lower walk, one row in the center of our middle bed, and those which support the ridge-

board on the lower side of our upper walk.

We use ventilators the whole length of the house, 30 inches wide, opening at the ridge. Arms are fastened to one-inch pipe, placed 14 inches below our ridge-board, and attached to our sash, and the sash is raised by levers on our pipe, placed about every 40 feet. In practical use these levers seem to be fully equal to any of the patent ventilating apparatus now in use.

Always use double thick glass, first or second quality. It is much stronger and saves breakage, and will pay for its extra cost in two winters by the saving in heat. As we are in a situation where there is no dust or soft coal used, we butt the glass; first with a Scollay putty bulb, putting in a mixture of ½ each, white lead, putty and oil, on the groove where we lay the glass; after laying the glass we cover the sash sticks with zinc strips, 3 feet long, bent oval, and nail with one inch wire nails, these not only keep the glass solid, and prevent any from blowing out, but protect the sash sticks from the weather and save painting. When there is dust and dirt the glass will have to be lapped, as the dirt goes through the cracks between the glass, and lodges on the inside, making it dark and dirty.

We would heat our houses with steam, and have the necessary valves so as to run one, two or more pipes as needed. If practicable I would place one under the back and first bed; one along the gutters, and three or more equally distant as necessary, hung from the roof of the house, which insures an even temperature throughout all the house.

Our side-hill makes it possible to set our boilers and have no deep ash pit; and no trap to return the water. It protects us from the cold north winds, and makes it warmer for us when the sun shines, thereby saving coal and labor in firing.

We must not forget our force pump; how with 30 pounds of steam, we are able to take the water from our cisterns, and deliver it in every part of our house with such force that all the red spider are easily destroyed, and how by changing cisterns, we can make the plants grow with fertilizing water delivered in every part of the house just as we want it, and where we want it, through the hose.

Neither must the coal-house be forgotten. By placing it up on the hill above the boilers, the coal can be led by chutes down to the boilers, thus saving the handling usually necessary.

In the hasty description given, it has been impossible to give nearly all the good points of this style of houses, but for economy and profit they are all that could be desired, especially for growing cut flowers.

Rare Cacti, Agave, Etc.

At the Shaw Botanic Gardens, St. Louis, I saw a superb collection of cacti and agaves. Among them were some very quaint new forms of mammillaria and echinocactus, the rare *M. sphorocrea*, *Pilocereus Houlettii*, *Cereus pycnophormis* and the charming new filiferous *Agave vestita*, having very pale green leaves margined with pure white and the filaments very long and numerous.

Mr. Garvey informed me that last summer a plant of *Euryale perox* had leaves five feet in diameter, resembling the victoria in appearance. JOHN THORPE.

WHEN you write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

A STUDY IN PINK AND WHITE

A Study in Pink and White.

The basket seen in the illustration is one of a number imported from France. It is made of a beautiful shade of green rush, which harmonizes well with the foliage of the roses and also with the young foliage of the peach. The shape is peculiar but graceful. We can think of no flowers better adapted to such a handle both in color and form.

La France roses were used and contrasted well with the green basket. The natural direction of the branches was changed in three cases, to produce curved lines as a contrast to the naturally straight ones of the boughs. One of the curves will be noticed on the handle at the top, and one from right to left, these two curves have more effect than at first

would be supposed. Lastly the lowest branches are bent in order to have a bit of pink against the green basket at this point. The butts of the branches are placed at different angles and cut in different lengths, which is far better than to have them arranged parallel to each other and cut of the same lengths.

This is one of many baskets we have arranged while the customer is in the store. We often find that doing this not only gives the customer pleasure but is a good way of making a sale when they are undecided what they want.

At no time are intelligent and willing assistants more appreciated. When two can work together upon the same design with entire harmony of thought and action, it gives four hands to one head. In this case while one of our men was

filling with moss, I arranged the cluster of roses. I held a branch of blossoms in position; he made it fast. I bent a branch for the curve; he fastened it with wire. He followed me and fully understood what I wanted and how I wanted it, and I doubt whether a word was spoken between us. I do not speak of this as being anything particularly new, but it is surely a marked contrast to many baskets I have seen filled, when customers were present criticising every flower that went into the design, the florist, meanwhile standing patiently by, wiring or putting a toothpick on every flower and placing it as he was directed. In arranging this basket but five pieces of wire were used, and one can readily understand that it took but a few minutes to finish it. Not a bud or blossom was moved after being once placed.

H. H. BATTLES.

About Floral Designs.

For some years the call for made up designs has been falling off with me, and from reports in the *FLORIST*, this seems to be general all over the country. It has even gone so far that the editors of daily papers have taken up the cry, "away with the designs," to judge from a note in the *FLORIST* of April 30.

In my opinion we need not look far for the cause. We are ourselves at fault. We have gone too far in our efforts to satisfy the popular demand for "original" designs. It can not be denied that thousands of designs have been turned out of florists' shops, which shocked the sensibilities of cultivated people by their hideousness and artificiality, that were a crime against nature. The broken mill-stones, telegraph poles, street cars and what not, in the construction of which thousand of flowers were absolutely spoiled, in response to the demand for "new designs" has in my opinion injured the trade to an extent that it would be difficult to estimate.

We must return to a more natural style of arrangement. In my own business nine-tenths of the funeral designs ordered last year were wreaths, and I am glad to see the wreath come again into prominence. It can be filled in an almost innumerable variety of ways, and there is no more beautiful and appropriate design. It can be made up at any price ranging from \$2 to \$100, and is always satisfactory if tastefully arranged. A well made wreath, pillow or cross is always appropriate and acceptable and can be made up to suit most anyone's taste and still be an artistic success. Let us try our skill on different arrangements of these simpler designs rather than be continually searching for something new in form but harsh in outline. Of course we will occasionally have a customer who will insist on the execution of his or her own ideas, but I question the expediency of permitting anything to go from our stores that will not be a credit to us.

The "original funeral design" described as the heavenly lamp, and which I understand received first premium at the recent exhibition of the New York Florists' Club, may have been, as Mr. Thorpe says, "A unique and very expressive piece of work," but it certainly was not an artistic success. In my opinion we should never attempt to make such pieces. The same flowers arranged carelessly on a table would have been far more beautiful than they were after all the labor wasted in putting them into the shape of a candelabra.

I call to mind a dinner table decoration

described in the FLORIST which was probably most elaborate, beautiful and costly, but it was made in the shape of a wagon wheel. Was this appropriate? Is a wheel in place on a table?

I should like to see these matters discussed in the FLORIST. Am glad to see that the Florist Club in Chicago has taken up the question of the arrangement of flowers and hope that the discussions will be fully reported for the benefit of the readers of the FLORIST. It is certainly a matter of importance to every one in the trade.

ART. G. S. S.

Flowers and Their Color Effects.

In an article appearing in the issue of the AMERICAN FLORIST of February 26 last we considered the theory of color in its adaptation to the arrangement of flowers.

Now, if we would test the strength and truth of a theory, we must put it to the test in practical work and observe the results obtained. Perhaps in some degree we may find our theory correct, and again it may be found in some directions at fault. There is nothing, however, quite so reassuring to our judgment as practical experience.

Suppose then we turn our attention to some of the flowers now in season and study the effects produced when they are placed together under certain conditions.

There are methods of arranging flowers according to color and form out of doors, which would be wholly at fault exercised within doors and vice versa. We naturally expect more refinement and care in the arrangements for our drawing rooms than in those for the garden beds. But just precisely what we look for in either use is good taste and it is good taste which invariably brings about something which is not common-place.

Just now our gardens are filled with tulips; it is a glorious and brilliant family, this royal Dutch company, and it will tax all our ingenuity for its arrangement. Here are some æsthetic plum-purple ones and beyond are some whose petals are delicately rose-tipped; these must not associate with each other, if they do they will quarrel. There is no word which will express the idea of the disagreement quite so exactly. Our purple tulips then are possessed of a peculiar disposition and the light and rosy faced ones are not fit company for them; either they must have the companionship of yonder pale magenta variety or we must off-set their color with the sharp contrasts of yellow or white varieties. Again, we have beside us some brilliant and powerfully colored specimens, which will give us some trouble because (if I may be allowed the expression) they are so "loud-spoken." But we cannot err if we place the yellow beside the white, the oddly slashed and deeply colored ones beside the deep red and the flame beside the scarlet.

Those varieties which are slashed at the edge—one of which is suggestively named the parrot tulip—and those which are dashed with dark stripes of æsthetic color produce most charming effects when mixed with the brilliant single colored varieties. The parti-colored tulip we will find has a confusing effect in large mixed masses and the restful influence of a plain colored variety near it needs no word of recommendation.

And what shall we do with the dainty and airy pink sweet pea? We have forced this summer fairy into an early bloom, we have captured her before her time; Keats says: "She is

"On tiptoe for a flight."

We would better let her remain so and use the airy creature in the daintiest ways for our indoor decorations. The stems together with a bit of pink satin ribbon and let her fly. What an appropriate flower she is for the now fashionable "Pink teas." If she needs a bit of green background what could be better beyond her own natural green foliage than a graceful spray of smilax? Perhaps we do not fully appreciate the value of green in our floral decorations. A glance at the florist's window with its jars of yellow and scarlet tulips massed in separate groups of powerful color would lead us to imagine, if we were unacquainted with the fact, that the flower grew without a hint of green beyond its stem. It certainly

CUT FLOWER BOXES.

must be a false conception we entertain of color if we do not recognize the emphasis which nature lays on her restful greens. They are a necessary background to all her color effects.

Then there are the golden coreopsis with their maroon velvet centers; what an opportunity here for effecting gold and white! I can conceive of nothing more fascinating than the bright faced coreopsis flower mixed with graceful stems of good, old-fashioned white stocks. This is a combination that smacks of our Colonial ancestors. Florists would do well to study the taste which nowadays tends strongly in the direction of Colonial decoration. That means an almost exclusive use of white and gold. Our white carnations, the yellow variety called the Astoria, the white stocks, the golden calendulas and coreopsis, white roses, the yellow roses and the large variety of yellow and golden toned nasturtiums; these are all flowers particularly adapted to the decoration of drawing rooms where the prevailing tones are white and gold. Only let our combinations of form and color be refined and free from conventionality—in a word, let us be natural. Let us be guarded against dangerous combinations; keep the yellow rose away from the coreopsis and the Astoria pink away from either, nor let the nasturtium show its delicate yellow beside the rich calendula.

There are a confusing number of bright colors among our carnation pinks and some of the specimens are wonderfully bright in tone, but dangerous in use with

out the exercise of great care. The Portia, for instance, outshines (especially under gas-light) every red flower that comes near her. It is better to keep her away from every carnation except the white. And it is almost necessary that she should be supported by a generous background of green. Then the Wilder carnation is a dainty bit of pink and is ruinous in effect beside the Astoria. Try her with a bunch of mignonette for company and note the harmonious result. Most any of the carnations will associate agreeably with the white variety and we cannot be too prodigal with the latter.

We must learn the value of white as well as of green, use flowers with the distinct idea that their individual form must be properly visible. Adhere to a principle of simplicity.

In the next article we will consider some combinations and effects among blues and purples, like those in the violet, pansy, hydrangea and forget-me-not, and how best we can relieve flowers of an intense hue.

F. SCHUYLER MATHEWS.

Cut Flower Boxes.

We present herewith an illustration showing the shapes and sizes of the boxes used by Mr. M. F. Gallagher, a Chicago florist, for retail trade. The dimensions in inches are given on each one, the only omission being the depth of the bottom one, which is six inches in depth, this having been accidentally left out by the engraver.

The one at the top Mr. Gallagher calls a violet box, being used mainly for one or two bunches of violets. The next four are rose boxes, being long and narrow, to accommodate from one half dozen to three or four dozen long stemmed roses, without being obliged to bend the stems. The square boxes that follow are for larger quantities of loose flowers or for flat bunches, wreaths, etc. In addition to those shown Mr. Gallagher has the usual boxes for pillows, etc., but those shown are the ones for which he has most frequent use and they are of the sizes that some years of experience have taught him are the most useful in his retail business.

The boxes shown were made to order, of these special sizes. Florists can have them made of the sizes noted, by their local box makers, or if desired they can get them from the party who made those illustrated, and whose card will be found in our advertising columns.

Long Island Notes.

BY WM. FALCONER.

LILY OF THE VALLEY is in splendid bloom. A moderately open position and an annual top-dressing of manure are what it loves. In later localities, what a capital thing it is to have for Decoration Day.

ARMERIA VULGARIS and its varieties, or thrift, as we usually call it, is in full bloom, and it makes the neatest edging of its season. By dividing it in early spring it may be increased in any quantity.

BEDDING OR TIEFFED PANSIES are not used nearly so much here as in European gardens, but we will grow towards them. Those I raised from seed last August are in full bloom; those I raised from seed in February have begun to bloom. Planted out as edgings to beds they are very decided and pretty. They are self, pure white, bright yellow and deep purple.

DOUBLE-FLOWERED PANSIES are more odd than beautiful, but they are very interesting.

FIRST PRIZE BASKET—BY WARENDORF.

SECOND PRIZE BASKET—BY MERRITT.

THE WINNERS OF THE JANSEN PRIZES AT THE NEW YORK SHOW.

BRIDESMAIDS BOUQUETS—BY MERRITT AWARDED THE HORAN PRIZE AT THE NEW YORK SHOW.

SELECTING PANSIES FOR SEED.—Better have a few real good pansies than a host of indifferent ones; then pluck out and throw away every poor pansy in your frame, and if you haven't any very extra pansies throw them all out and spend a dollar for A 1 seed.

MYOSOTIS DISSITIFLORA isn't reliably hardy here, so we grow our large plants in frames in winter to give us flowers in March and April, and our young plants to set out in March for flowering in April and May. The large plants we left out last winter got pretty well killed back, but as the spring advanced they began to grow and for the past three weeks have been full of flowers.

AQUILEGIA CHRYSANTHA ALBA, the new white-flowering golden columbine, a novelty last year, is now in bloom with us

and it is a very desirable plant. The seedlings were raised in spring last year, planted out over summer and left out, and they have now come into bloom—a little ahead of chrysanth, usually. So far the plants are stocky and the flower stems 16 to 20 inches tall, little more than half of what the plain chrysanth usually runs to. And the flowers are large, long-spurred and white, with a tinge of yellow or blue in it. About half of the plants are white flowered and the others yellow, but this large percentage of yellows may disappear with continued isolation and selection. Coming in to bloom so early caused me to think *cœrulea* had a hand in this variety, but as not one of the seedlings have blue flowers, I presume it is chrysanth clear through.

NEW JAPANESE TREE PEONIES.—In the old-fashioned Moutan or tree peonias we have some very handsome large double flowers, and the earliest of all peonias. But these new Japanese tree peonias are single flowered, exceedingly large and a revelation of loveliness and elegance; and in color they range from pure white to silvery and La France pink, and bright glowing crimson. And there are some purple shades among them that I don't like, but you needn't get these varieties. They open wide in the day time and close at night. Some blossoms of our plants by actual measure are 9½ inches across.

DOUBLE PYRETHRUMS.—Aren't they handsome? Pure white, pink, rose and crimson and full double. And they are perfectly hardy. In their way we have nothing finer among greenhouse plants, and they have long, stiff stems, are excellent for cutting and last well. They are increased by division, and, curious enough, some of the finest white varieties are the easiest to increase as they make large clumps that break apart quite easily. Don't you think a big bed of these double pyrethrums in full bloom Decoration Day might help to pay your taxes? Try it.

ROSA RUGOSA ALBA came into bloom May 11, and *R. Kamtschatka* (which is not unlike *R. rugosa*) on the 15th. These are the earliest out-door roses with us this year. We enjoy these early *rugosa* roses very much because the flowers open and remain perfect while they last; about the first of June the rose bugs come in thousands, then we seldom get a perfect rose.

TO SHOW THE HARDINESS of these *rugosa* roses I may state: We had a large dense mass of them several years old, and last year they became badly infested with bark scale; before the winter set in I cut them over clean to the ground which was left exposed. The roots are now sending

up a forest of extra strong shoots, which so far, are perfectly clean.

SPURLESS COLUMBINES.—We now have a race of these with a well-established identity, but they are a detraction and not an attraction to this favorite genus.

HARBY PASSION FLOWERS.—Last winter was not a severe one so far as intensity of cold was concerned, but we had a good deal of sloppy, icy and snowy weather. I left out a lot of "harby" passion flower vines, as *Cucurbit*, *Constance Elliott*, etc., cut them back last fall and mulched about them heavily, but so far not a vestige of a sprout has started from the old roots. Later on some sprouts may appear. Now, under these circumstances they are not hardy here.

SMALL BULBS are harder than large ones. Where we had gladioli growing last summer, the little bulbets that became separated from the large bulbs at lifting time and remained in the earth over winter have come up quite thick all over the ground. Old bulbs get killed out if they are near the surface. *Hyacinthus candicans* is quite hardy and medium sized, and all lesser bulbs live well in the ground over winter, but very large bulbs are likely to rot off.

LAST JANUARY I got a large lot of left-over bulbs of *ixias*, *sparaxis*, *Allium Neapolitanum*, etc. Now, while these are very nice things to grow a few of for cut flowers and greenhouse decoration, I don't think it would pay to grow them in large quantities, because they do not give bulk of blossoms enough for the room they take. So I potted them pretty thickly into 4-inch pots and plunged these close together in a cold frame, protected from hard frost, and left them there till the ground was free from frost in early spring. Then I planted them outside in rows very thickly, and they are doing very well. The *sparaxis* are in fine bloom, the *alliums* opening out, and the *ixias* showing buds. To seedsmen who care to save the bulbs for another year this is a good way to treat them.

WINTERING MONTBRETIAS.—I usually lift a lot of each kind in the fall and store them thick together in a frost-proof cold-frame, and leave the balance where they grew outdoors to live or perish as the winter may devise. In the early spring, I lift out the clumps from the frame and divide and replant them, and they grow freely and blossom beautifully in summer. We are sometimes told the montbretias are perfectly hardy here, but they are not, they are only partially hardy. In a warm sheltered spot and under a mulching they live over winter fairly well. When I mulched the ground with straw or leaves, the field mice completely destroyed all the bulb roots; and a goodly part of them decayed under heavy rotted manure. But last fall I spread a 5 or 6-inch deep layer of old mushroom bed manure over the montbretias, and with complete success, every eye lived and now the old roots are broad thickets of rank "grass." Spent mushroom manure is light and chaffy and does not clog like rotted yard manure, and mice never bother it. It makes a capital mulch for outdoor bulbs and herbaceous plants, and in the case of early starting plants as *hyacinths* there is no need of removing the mulch as the plants push up through it without any impediment or impairment to their foliage.

RHODODENDRON (AZALEA) VASEYI, a recently discovered species in North Carolina is perfectly hardy with us, the earliest blooming of its race, and the loveliest of all azaleas its flowers appear

in great profusion and are of a delicate, lovely, pink color.

XANTHOCERAS SORBIFOLIA.—In the way of shrubs now (May 20,) in bloom, this eclipses everything in profusion and striking character. It is a recent introduction from China, and perfectly hardy, and young plants only 15 or 16 inches high bloom nicely. In habit it is one-stemmed and resembles a miniature tree, and has no appearance of a shrub as a *deutzia* or *hydrangea*. Its flowers are moderately

CYTISUS CANARIENSIS

CYTISUS RACEMOSUS

large and showy, white tinted with red inside at the base, and arranged on long upright racemes, and so floriferous are the plants that, the main stems excepted, nothing but flowers is now visible. What a sensation a few of these plants in full bloom, in pots or tubs, at Easter, would make! There is no denying the fact that church people are looking for something more graceful than stiff *hydrangeas* and bunched *azaleas*.

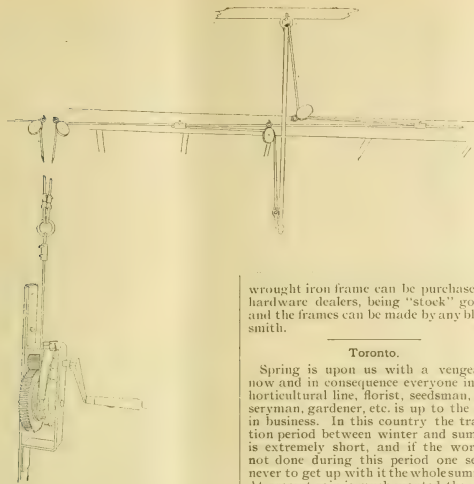

THE THREE SNOWBALLS.—We have three, namely, *Viburnum Opulus sterilis*, which is the common form and has the largest snowballs of any; *V. plicatum*, which is usually known as the Japanese snowball, and is a little later than the other; and *V. rotundifolium*, which although after the fashion of *plicatum* is perfectly distinct from it in wood, habit and time of flowering; its blooms open (become white) four or five days ahead of those of *plicatum*. The three kinds are indispensable. The leaves of *plicatum* and *rotundifolium* are never murred by insects, whereas those of the common sort are always, more or less, infested and curled with aphides.

Cytisus Racemosus.

There is some lack of direct evidence in support of Mr. Falconer's repeated assumption in the columns of the *AMERICAN FLORIST* that this plant is a variety of *C. Canariensis*. The plants are very distinct, as will be seen from the accompany-

ing figures of typical flowering branches. Note the larger leaves, with more pointed leaflets of *C. racemosus*, and the much elongated raceme of flowers. The leaves of *C. Canariensis* are also more densely covered with fine downy material than those of *C. racemosus*. The origin of the latter plant is involved in much obscurity. It was first referred to as a new introduction in 1837. Mr. R. A. Rolfe, a distinguished botanist of Kew, with all the facilities of that institution at command considers it more probably a variety of *C. stenopetalus*, another species from the Canary Islands, and this view is no doubt correct. But Mr. Falconer may be in possession of facts to protect his position. Precise information on this question however has been eagerly sought for many years, and if the latter can now aid in its solution he will confer a much esteemed favor on several interested parties. *C. Canariensis* and *C. racemosus* are both good garden plants, but I consider the latter entitled to preference. It is of more compact habit than the other, and its much larger racemes are more serviceable. The racemes of *C. Canariensis*, it is but right to add, appear in greater profusion, but the number is still insufficient to allow the plant to meet the compensative qualities of *C. racemosus*.
Cambridge, Mass. M. BARKER.

WHEN WRITING advertisers please say that you saw the adv. in the *AMERICAN FLORIST*.

INEXPENSIVE VENTILATING APPARATUS.

Inexpensive Ventilating Apparatus.

Some time since we illustrated a cheap ventilating apparatus used by Mr. J. T. Anthony, a Chicago florist. We now present an illustration of an improvement on the same as developed and used at the new greenhouses recently erected at Lincoln Park, Chicago. We are indebted to Mr. J. A. Pettigrew, superintendent of the park, for photographs and sketches from which the illustration is engraved and also the following description:

"Referring to the sketch of device for greenhouse ventilation would say that while the idea is not new its application in many cases has been cumbersome and crude and failed to do the work required. The sketch shows the method of application in a range of newly erected houses at Lincoln Park.

"The winch comprises a 6 inch bull wheel, a pinion of $1\frac{1}{2}$ inches, a drum of 4 inches, a ratchet and dog and a 12 inch crank handle, set in a wrought iron frame bolted to the inside end of house. This is found to be of sufficient power to operate nine sashes on each side of a house 100 feet by 31 feet, amply sufficient for ventilation, and either side can be worked separately at will by the same winch.

"Heretofore a great objection to the use of this system has been the want of a lock to hold the sash whether open or closed. This has been obviated at Lincoln Park by the use of Mr. O. Parker's device, an idea born of necessity while fitting up the system and for which he has applied for a patent. The lock is accomplished by running an auxiliary cord back from sash to cable in the opposite direction to that of the lifting cord.

"The cost at Lincoln Park has been complete for the apparatus at the rate of \$1.40 per ventilating sash, or \$26 per house of 100 feet long."

All the parts with the exception of the

wrought iron frame can be purchased of hardware dealers, being "stock" goods, and the frames can be made by any blacksmith.

Toronto.

Spring is upon us with a vengeance now and in consequence everyone in the horticultural line, florist, seedsman, nurseryman, gardener, etc. is up to the eyes in business. In this country the transition period between winter and summer is extremely short, and if the work is not done during this period one seems never to get up with it the whole summer. At present rain is much wanted, the grass on some lawns actually beginning to scorch. Bedding out does not begin generally until the last week in May. "After the Queen's birthday" (24th) is the usual response to the query, "when do you begin to bed out?" There are always some venturesome ones of course, but I don't think they get much ahead if I don't of those who plant later in the long run.

The Gardeners' and Florists' Club's regular monthly meeting took place on the 13th. The chrysanthemum show prize list was the "piece de resistance" and there was some pretty lively resistance too. The greatest tussle was over plants being grown on single stems; in the majority of cases those in favor of single stem plants carried the day though the voting was close all through. We think now that we have a prize list as good as the best with the exception of the size of the prizes, which are not quite so large as those of some other cities, but owing to the youth of our club we deem it wise to go slow on this point; however about \$500 is offered and this amount being distributed as it is in the list ought to bring out a first class show.

I should like Mr. Editor, to hear some opinions on this single stem business from some of the "big guns." About the only thing in its favor that I hear is that it is the universal custom in the old country to grow plants for exhibition on a single stem. No doubt it requires more skill and attention to grow them so, but the chrysanthemum is herbaceous and naturally throws up many stems and if better plants can be grown with more than one stem, why not allow them to be grown so for exhibition? What can be more beautiful than a naturally grown spray of chrysanthemum, though no one expects to see the largest flowers on such a spray (I do not intend against large flowers). A floral design may be "fearfully and wonderfully made" and be ever so skillfully fixed up, but it is quite another matter whether it is beautiful from a really artistic point of view. Sometimes shrubs, etc. are clipped

and screwed into most astonishing shapes and forms, but are they beautiful? Is not the skill alone displayed that excites the wonder of the beholder? It seems to me that in these days of enlightenment people want things to be artistic. Can art be more beautiful than nature? Ingrowing plants for exhibition I suppose what is aimed at is to show off all their good points to the best advantage, to do which it is necessary to depart from the natural to a certain extent, but why go out of the way to do so simply because it is an old custom? It is said also that allowing more stems than one opens the door to fraud. Is this really so? Is anybody going to put half a dozen plants into one pot when all the stems he wants will come up of themselves if left alone? I will admit I was among the minority on this question, but am quite willing to be converted, but it must be by a stronger argument than "it is always done in the old country."

There was a report from the entertainment committee that matters in that department were progressing and it is hoped that by next meeting there will be something definite to report. The president also reported that he had secured from the city the horticultural pavilion in which to hold the convention and trade exhibition for the third week in August.

E.

Boston.

A beautiful lawn vase suitably inscribed has been presented to Mr. H. H. Hunnewell by the Gardeners' and Florists' Club of Boston, in recognition of his generous entertainment of the Society of American Florists at the time of the Boston convention. The vase is very large and handsome, somewhat similar in pattern to the one presented to Mr. G. W. Childs on a like occasion a few years ago by the Philadelphia Florists' Club.

The periodical scrimmage between the store florists and the street fakirs has been on during the past week in the form of a complaint in court against one of the street men for obstructing the sidewalk. The party complained of had been selected as a sample and the proceedings were regarded in the light of a "test case." The result of the trial was an acquittal for the defendant and the street fakirs, who are now almost "as thick as flies," are jubilant.

The store men have themselves to thank mainly for the present unsatisfactory condition of things, as they have always opposed or ignored any and all attempts which have been made to systematize the business to regulate the methods of disposing of flowers at wholesale or to secure greater uniformity in prices.

At Horticultural Hall on May 23 Jackson Dawson made a display of lilacs which comprised thirty-four varieties and surpassed any similar collection ever shown here.

There was also an attractive group of Bizarre tulips from J. Warren Clark. These old-fashioned favorites are now seldom seen excepting in an occasional old time garden, but they deserve a better fate.

A party of four or five of the boys took a holiday recently and went twenty miles up into the country with the intention it is said of catching some fish. They were more fortunate than some fishermen are, for they did bring home something, to-wit: A very large bundle of asparagus. The upholstered seat of a bouchée is a comfortable position from which to inspect farms and fill the poor farmers with envy, but

for the purpose of fishing it can hardly be called a success.

Benji Grey, of Malden, has recently published a very neat and instructive catalogue of aquatic plants.

Much interest is manifested here in regard to the coming convention at Toronto, and judging from present indications the delegation from Boston will be the largest on record. W. J. S.

New York.

The cut flower trade has been better than expected, owing to the cool weather and the falling off in the supply. All out door bulbous stuff is gone. There will be several large floral decorations this week of which I will give an account next issue.

Judging from the report of the plant growers, the business at both Spring street and Union Square markets is very good and plants are bringing fair prices.

Dards had the order for the dinner given in honor of Alderman Storm, at the Manhattan Athletic Club, on Wednesday evening, May 20.

The hall was elaborately decorated with palms and other tropical plants. The dining room was a marvel of beauty. The chandeliers were profusely decorated with garlands of smilax, adiantums and orchids, while the mirrors, etc., were very appropriately decorated with the same, and large groups of palms constituted the corner decorations of the room.

On the table which was set for 20 was a very large centre piece of American Beauty roses, edged with calla lilies, and from every third calla a different colored electric light shone.

Many distinguished guests were present, among whom were Mayor Grant and Chauncey M. Depew.

Alex. Varendorf has made a reputation for himself by the very handsome wedding decoration which he made at the Church of the Holy Transfiguration on Tuesday, May 19, at 2:30 p. m., on the occasion of the marriage of Miss Pell. After the wedding ceremony a reception was held at the house of the bride's mother. The bride received her guests beneath a canopy of orchids of the choicest varieties and adiantums, and held in her hand a bouquet made of lily of the valley, tied with a handsome white ribbon. The mantels in the parlor were banked with orchids and adiantums, and taken in all, the decoration was one of the most pleasing that we have seen in some time.

We notice with great pleasure that Jos. Feischman has opened a store on Broadway opposite the Grand Hotel. The store is very handsomely fitted up, the walls being almost entirely covered with mirrors, and his display of roses and other choice flowers is worthy of any florist. He is a young man and started at the foot of the ladder, but by perseverance and attention to business has risen to his present position. We hope he may continue to do as he has been doing.

In a recent issue we announced that Mr. Lawrence Hafner intended opening business for himself. It is now our pleasure to inform our readers that he has opened an elaborate florist establishment at 911 Broadway. It is gratifying to announce this starting in business life and Mr. Hafner has our best wishes for his future success.

At a meeting of the committee for the revision of the by-laws of the New York Florists' Club held at the office of Theo. Roehrs, Mr. Dean, chairman of said committee, presented corrections and amend-

ments which after being debated on by the members of the committee and the necessary changes made were adopted.

A report of this committee will be read at a meeting of the club on June 8, on which occasion the regular nominations for officers will be made for the ensuing year.

Regarding comments on designs on page 781, No. 155, wherein you say that you think that set designs should be abandoned because they take from the grace of the flowers, allow me to say that that is all right in regard to bouquets and baskets, but if crosses, wreaths, and/or any set design were ordered and you were to make them up loose and show the "grace" of the flowers, can you tell me what the design would look like? In regard to Nugent's lamp I think he deserves credit for going to the expense of making up such an elaborate design for the benefit of florists generally. The same may be said of Foley's Candelabra.

JOHN YOUNG.

OBITUARY.

CHARLES M. PRESBY, of the John Henderson Co., Flushing, N. Y., died suddenly, May 17, at Chemnitz, Saxony. He was born in Montreal in 1837, came to New York in 1855 and entered the dry goods trade. Since 1876 he had been buyer for Arnold, Constable & Co., and he was abroad for them at the time of his death.

He was always a great lover of flowers and a few years ago when the late John Henderson retired from active business Mr. Presby associated with Mr. Charles Anderson, for many years foreman for Mr. Henderson, purchased the business, conducting it since that time under the title, the John Henderson Co. The body has been embalmed and will be brought to New York for interment.

THOMAS KERIES.—It is with regret we record the death of Mr. Thomas Keries, who for 10 years has been with Hammond & Hunter, the wholesale florists, and since the dissolution of the firm has remained with Mr. Frank Hunter, who continued the business of the firm.

Mr. Keries was enjoying good health until late on Friday evening, in fact your correspondent was talking with him about half an hour before he was taken sick. He was very popular in the business and a most exemplary man, gentlemanly and upright in all his dealings, and with fervent sorrow all florists mourn his loss.

Chicago.

Business quiet, but little change from last report. No material change in prices.

The statue of Linnaeus, the great botanist, recently erected in Lincoln Park by the Swedish residents of the city, was unveiled and formally presented to the authorities last Saturday afternoon. There was an immense turnout, the various Swedish societies parading their full strength, decorated with badges and flowers. The statue is of bronze, of heroic size, and represents the man of science returning from a botanizing trip, carry-

ing a book of specimens under one arm and a few flowers in his hand.

Final action has not yet been taken by the World's Fair directors regarding the chieftaincy of the Department of Horticulture. It is now reported that nothing will be done until June 9.

"Rogers, the florist, has come to stay," was the sign displayed last week in the store occupied by Tom Rogers on Wabash avenue, but there seems to have been some mistake somewhere, as he is not there this week.

Among recent visitors to the city was Mr. L. S. Swanson, of Duluth, Minn.

Best Selling Coleus.

Will some of the Chicago retailers give me the names of coleus selling best around Chicago. C. F.

IF YOU LIKE THE AMERICAN FLORIST give it your fullest support by confining your orders to those who advertise in its columns and mention the paper when ordering.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) per insertion. Cash must accompany order. Plant ads. not admitted under this head.

THE ARRANGEMENT OF FLOWERS.

In the discussion upon this very interesting subject, thoughts should be expressed with precision, and to that end we ask all to read carefully the following quotations from Webster:

TASTE, noun. Nice perception, or the power of perceiving and relating excellence in human performances; the faculty of discerning beauty, order, congruity, proportion, symmetry, or whatever constitutes excellence of beauty in the fine arts; critical judgment; discernment.

Some consider taste as a mere sensibility, and others as a simple exercise of judgment; but in union of both is requisite to the existence of anything which deserves the name. An original sense of the beautiful is just as necessary to aesthetic judgments as a sense of right and wrong to the formation of any just conclusions on moral subjects. But this "sense of the beautiful" is not an arbitrary principle. It is under the guidance of reason; it grows in delicacy and correctness with the progress of the individual and society at large; it has its laws, which are seated in the nature of man; and it is in the development of these laws that we find the true "standard of taste."

BEAUTY, noun. An assemblage of graces or of properties which pleases the sight or any of the other senses, or the mind, by the quality of an object which delight the esthetic faculty.

SOME TIME since we noticed the formation of an organization of florists in different cities whereby orders taken in one city for flowers or arrangements to be delivered in other cities, were filled on telegraphic order by the member of the association doing business there. For instance, if Mrs. Jones, in Chicago, wanted to send some flowers to Mrs. Jones, in New York, she could leave her order with the Chicago member of the association, he telegraphs the order to the New York member, and delivery is at once made. The New York member charges the same to the Chicago member, less a commission, and the latter, of course, collects from the customer. This association, the idea of which, originated with Mr. C. B. Whitnall, of Milwaukee, now has members in nearly all of the large cities, and a new feature has recently been added in the form of a letter of credit, which members may issue to customers who are going to travel. This is an order on any of the members of the association, good for a stated length of time, anything delivered on account of it to be charged to the one issuing it, he to collect for same, and receive a commission on the sales. By this means it is expected to secure to the association the trade of the customers of each one, while away from home.

THE Bay County Horticultural Society, Bay City, Mich., which will give its first chrysanthemum show November 5 to 11 next, has offered to give twenty-five collections of chrysanthemum plants of one dozen each, to those who will agree to grow the plants for exhibition at the show. Cultural instructions will accompany each collection, and by this means it is expected that considerable interest will

be awakened. The list of premiums foots up to over \$1,000, among them being \$100, \$50 and \$25 for collection of cut blooms, not less than 50 varieties and not less than 100 blooms, open to all outside of Bay county. Premium lists may be had on application to T. J. Cooper, secretary, Bay City, Mich.

THE CALIFORNIANS have recently been enjoying their annual "flower festivals," "rose festivals," etc., and these affairs seem to be increasing in number and magnitude every year. At many of them prizes are offered for best displays of certain flowers, but they are not exactly competitive exhibitions in the sense we in the trade use the term. They are rather a combination of flower show and church fair, but they certainly do much to advance the interest in plants and flowers.

WE COMMEND the notes on color contrasts in the arrangement of flowers which appear in this issue to the careful consideration of our readers. Mr. Mathews is peculiarly well fitted to deal with this subject in a practical way, being familiar with flowers as well as an artist of note. In subsequent issues we shall publish other articles from his pen, treating particularly of the proper combination of flowers then in season.

THE semi-annual meeting of the Missouri State Horticultural Society will be held in St. Joseph, June 2 to 4. The meeting will be held in the Y. M. C. A. Hall. A rate of one and one-third fares for the round trip has been made by most of the railroads. The programme has been printed and copies may be had on application to the secretary of the society, Mr. L. A. Goodman, Westport, Mo.

THE S. A. F. is probably the largest trade organization in America. Shall we not have the ordinary reduced rates given to the smallest societies. We think yes. Western members should act as indicated elsewhere in this issue, immediately.

YOU WILL benefit the FLORIST by mentioning it every time you write one of our advertisers.

PROF. L. H. BAILEY has resigned the editorship of the *American Gardener*.

Our Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president; JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1894.

Government Seed Dept 1885.

In the report of agricultural expenditures, which includes many other items, the money expended by the government for the annual distribution of seeds is one of some interest to seedsmen. We have lately been favored with a set of these records extending back some time and have made some notes of their contents. For instance, in the record for the fiscal year ending June 30, 1885, Norman J. Colman, then commissioner of the department, saw fit to itemize all invoices, stating quantities purchased and prices paid and some of these details are instructive as indicating the sources from which the government deemed it wise to secure its supply. Messrs. P. Henderson & Co. furnished among other things \$1,400 worth of Kentucky Blue and other grass seeds and over \$3,000 worth of ordinary varieties of turnip seeds. F. E. McAllister supplied \$1,000 worth of sweet corn and \$1,500 worth of flower seeds. G. S. Haskell & Co. besides many other seeds, furnished over \$2,800 worth of cabbage seed. The total expenditure for the year ending June 30, 1885, for seed was \$67,410 and for labor \$23,450.

American Seed Trade Association.

SECRETARY'S OFFICE, BOSTON, MASS., May, 19, 1891.

To the Members of the American Seed Trade Association.—At the last regular meeting of our association held in Saratoga, N. Y., June, 1890, the executive committee decided to hold the next annual meeting in Cincinnati, O., beginning the second Tuesday in June (9th), and the same was approved by the association then in session. I am pleased to report that since that time the executive committee have arranged with the proprietors of the Burnett House in Cincinnati, for accommodations and headquarters; special terms to members and their friends at \$3.50 and \$4.00 per day. We are negotiating with the Trunk Line Association, and the Central Traffic Association, for special rates of one and one-third fares for the round trip on the certificate plan, for delegates and friends attending the meeting, covering the territory east of Chicago, Mississippi river and St. Louis, except Michigan and New England, but as yet no reply has been received. I trust, however, that the arrangement may be completed in a very short time, in which case I will take pleasure in notifying the members promptly by postal. In order that members and friends may avail themselves of this special rate, it will be necessary to observe the following:

First. Each person must purchase not more than three days prior to date of meeting (nor later than three days after commencement of meeting), a first-class ticket (either limited or unlimited), to place of meeting, for which he will pay the regular tariff fare, and, upon request, the ticket agent will issue to him a certificate of such purchase, properly filled out and signed by said ticket agent.

Second. If through tickets cannot be obtained at the starting point, the person will purchase to nearest point where such

through tickets can be procured, and there re-purchase through to the place of meeting, requesting certificate filled out by the agent at the place where re-purchase is made. Tickets for the return journey will be sold by the ticket agent at the place of meeting at one-third of the highest limited fare, only to those holding certificates properly signed and countersigned by secretary of the association.

It is very desirable that we have a full attendance at this meeting as there are quite a number of subjects that will be brought up which will be of vital interest not alone to the members, but to the entire Seed Trade of the United States. Those who have attended the annual conventions are unanimous in their belief that it pays them to do so, even when viewed from a financial standpoint. Besides this, social relations are developed to a large degree, and much recreation is obtained that would not otherwise be had. The association has already accomplished a great deal for the benefit of the Seed Trade, but there is much more to be done, and it can be much better

done by united action. It is earnestly requested that, so far as possible, every member be present. The larger the convention the more benefit will result.

Very respectfully,

JOHN FOTTLER, JR., Sec'y.

VISITED CHICAGO, the past week, Geo. S. Haskell, Henry A. Salzer, J. W. Eldering.

Coming Conventions.

THE ASSOCIATION OF NURSERYMEN will hold its sixteenth annual meeting at Minneapolis, Minn., June 3 to 5. Headquarters at West Hotel. Charles A. Green, secretary, Rochester, N. Y.

THE AMERICAN SEED TRADE ASSOCIATION holds its ninth annual meeting at Cincinnati, O., June 9 to 11. John Fottler, secretary, South Market street, Boston, Mass.

THE SOCIETY OF AMERICAN FLORISTS will hold its seventh annual meeting at Toronto, Ont., August 18 to 20. Wm. J. Stewart, secretary, 67 Bromfield street, Boston, Mass.

Palms and Dracaenas.

The largest stock in the west, at \$5.00 per 100 to \$10.00, \$2.00 to \$10.00 each. Cycas revoluta, 50c to \$5.00 and \$15.00 each. Cross leaves 50c to 25c each. **DRACENA INDIVISA and VEITCHII**, 3-inch pots, strong, 15 to 18 inches, 85.00 per 100. Send for wholesale price list and descriptive catalogue.

W. J. HESSE, Plattsmouth, Neb.

News Notes.

PULTON, N. Y.—D. A. Waterman has added a house 9x58 feet for carnations.

COLORADO SPRINGS, COLO.—Mr. S. D. Bradford, the florist, was married recently.

SHELDURNE FALLS, MASS.—L. R. Fuller has built a greenhouse here and is starting into the florist's business.

DOVER, N. J.—W. H. Spangler, Jr., the florist, was, on May 4, elected a member of the common council of this city by a heavy majority.

PLEASANT HILL, MO.—G. M. Kellogg is building three new greenhouses, each 15x19 feet, all glazed with double-thick glass. He expects to have them in running order by July 1. This addition will give Mr. Kellogg a total of about 20,000 square feet of glass.

PROVIDENCE, R. I.—The Rose and Strawberry exhibition of the Rhode Island Horticultural Society will be held in this city June 17. Copies of the list of prizes to be awarded can be had on application to the secretary, Mr. C. W. Smith, 55 Westminster street.

HARTFORD, CONN.—The Hartford County Horticultural Society has published its programme for 1891. A rose show will be held about June 18, an exhibition of plants, flowers, vegetables and fruit about September 22 and a chrysanthemum show November 3 to 5.

TORONTO, ONT.—The Toronto Electoral District Agricultural Society will hold its annual flower show in the pavilion at the horticultural gardens on Wednesday and Thursday, July 22 and 23. The prize list has been printed and copies may be had on application to J. P. Edwards, secretary, 146 Wellington street West, Toronto, Ont.

SHEFFIELD, CONN.—Mr. T. C. Austin, of the firm of T. C. Austin & Sons., florists, had the misfortune to have one of his legs broken May 8. While attempting to lead an unruly yearling he was thrown to the ground so violently as to fracture the bone between the ankle and the knee. Mr. Austin is 80 years old, and his age makes the accident an especially serious one.

BIG RAPIDS, MICH.—On May 15 fire destroyed the dwelling house, barn and a portion of the greenhouses belonging to L. L. Blair, causing a loss of about \$2,500, with insurance of only \$700. Nearly all the plants in the four greenhouses were destroyed or so seriously injured as to be of little value. A couple of rose houses escaped injury. Mr. Blair will certainly have the sympathy of his friends in the trade in the serious loss he has sustained.

NEW YORK.—The annual supper of the employees of Peter Henderson & Co. was held on Wednesday evening at the Dey St. Hotel. After full justice had been done to the elaborate menu, singing and dancing was in order and the talent displayed by the several artists, all of them employees, surprised their fellow workers and gained for them rounds of applause. A pleasant feature of the evening was the violin solo by Mr. Geo. W. Clark. A vote of thanks was passed for the able manager in which the committee of arrangements, Messrs. Thos. V. Smith, Wm. Bruce, Jos. A. Dailey and R. B. Sheridan, had prepared things. It was the "wee sma' hours" when the pleasant gathering sang "auld lang syne" and departed.

ROOTED CUTTINGS.

COLEUS: VERSCHAFFELTI, strong well rooted cuttings in quantity. Also a limited number of GOLDEN BEDDER, (the assorted ones are all sold). Price, \$5.00 per 100, 75 cents per 100. Verschaeffelti alone, 7500 and upwards, at \$5.00 per 100. This will be the last lot. Order at once.

CARNATIONS: Am entirely sold out. Thanks to the AMERICAN FLORIST.

PANSIES.

Still a few left, but only a few; if you can use them, order now, they will not be here long at the price for closing out. \$1.50 per 100; \$12.00 per 1000. All blooming plants.

Pansy Culture.

In a few weeks I will issue a circular containing a short description of my method of culture for producing the best plants for spring sales with the least expense. It will be mailed to all my customers as soon as issued, and to any others who are interested enough to send for it. I would like every Pansy grower in the country to have one.

AMERICAN FLORIST CO., 64 La Salle St., CHICAGO.

"A Battle of Flowers."

In describing one of the "battles of flowers" that occurred during the president's visit to the Pacific coast, the Santa Barbara Press says:

"The last maneuver before the grand stand was the battle of flowers between both counter-marching columns. It began with a deadly flourish of fans, parasols and flags. The first shot was a scattering one, of vari-colored bouquets between a rose-tub and a wild-mustard photon. Both effected great slaughter—of petals—but before arms could be recovered the desperate melee was raging all along the ranks. From the stand down to the arch of welcome the air was at one time bright with flowers. Sprays, wreaths and tied bunches hurtled from sideto side. Heavy ordnance of made bouquets did splendid work and caused many a gorgeous, mounted cavalier to dodge ingloriously. Over all fell a pyrotechnic shower of single blossoms. The air was a floral rainbow and the pavement a carpet of crushed sweets. The battle was waged with much spirit and not at all confined to the marchers. The school-children, sidewalk brigade and allies on the observation stand also took a lively part. A very pretty feature of the mimic war was the choice of ammunition, many of the floral equipages throwing only flowers like the trimmings. The ladies especially expressed great delight at the floral display on the passing carriages; hundreds of bouquets were thrown to the distinguished guests and the President made efforts to catch them all, but as they came in perfect showers his efforts were often in vain."

Ampelopsis Quinquanglemannii.

ED. AM. FLORIST.—Can any of your readers help the history of Ampelopsis quinquanglemannii? Any one who can, will confer a favor by so doing.

J. A. P.

A MOVEMENT is on foot looking to a change in the mail service whereby catalogues and circulars may be mailed at pound rates, doing away with the necessity of affixing a stamp to each one. The change would certainly be a most desirable one and would result in a saving to both the government and those who mail large numbers of catalogues. The *American Garden* is circulating a blank form of petition to use in presenting the matter to the postmaster general.

DURING the recent visit of President Harrison to California at nearly every city he was greeted with a display of flowers in the form of a procession of vehicles elaborately decorated with blossoms on the plan of the floral fetes which are common in Italy and the south of France.

WESTERN MEMBERS S. A. F., use your combined efforts now for reduced western railroad rates. See how to do it on first page of this issue.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equalled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/2-inch.....	3,000	250 lbs.
2.....	2,400	200 "
2 1/2.....	1,750	150 "
3.....	1,400	120 "
3 1/2.....	1,250	100 "
4.....	800	100 "
4 1/2.....	600	100 "

It will be seen at a glance, that our pots are one-third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **LET SEND FOR PRICES.**

ROCKFORD, ILL.—The ladies of one of the local churches are making plans to give a chrysanthemum show next November.

SAN ANTONIO, TEXAS.—During the recent visit of President Harrison, a feature of the festivities was a battle of flowers, and now it is urged that such a display be made an annual event.

ATLANTA, GA.—Next month the Atlanta Horticultural Society will have reached its 20th year. During its existence the society has accomplished much for the advancement of horticulture in Georgia.

AT THE RECENT exhibition of the California State Floral Society at San Francisco, Mr. John Rock, the nurseryman of San Jose, is reported to have exhibited a collection of cut roses that included 200 varieties.

THE Florist Club of California is reported to be considering a proposition to go into the raising of flowers on the co-operative plan at Piedmont. The club is also endeavoring to have an ordinance passed by the San Francisco authorities that will require the fakirs to pay a license.

GREENVILLE, S. C.—The executive committee of the State Horticultural Society met here recently and decided to hold the next meeting of the society in this city August 11, 12 and 13 next. There will be an exhibition of fruits, flowers and vegetables at same time, \$75 being offered in premiums in seven classes.

ALL ABOUT PROPAGATION

THE NURSERY BOOK, by L. H. BAILY, assisted by noted propagators. Describes the best methods of propagating over 2000 Varieties of cultivated plants. Nearly 100 Illustrations. Price, Cloth, \$1.00; Paper, 60 cents.

The Arrangement of Flowers.

BY F. F. BENTLEY.

[Read before the Chicago Florist Club, May 28.]

As the whole subject of the artistic arrangement of cut flowers has been so ably presented to you by Mr. Smyth in his paper read before you at our last meeting it will be only necessary to touch on a few points which he did not fully elaborate. In order to intelligently discuss this matter it seems necessary to enlarge the scope of the subject by adding a most necessary adjunct to cut flower arrangement, namely, plants and vines. No decoration in my opinion is complete without these, but as the arrangement of plants is foreign to the subject in hand, I shall not enlarge upon it any more than would seem necessary.

One of the cardinal points in artistic arrangement is the combination of color, another the proper place to put it in its proper place. Let us consider the former first. Too often it happens that we are hampered right here in producing an artistic effect by an order that the decoration must be done in, say, pink—pink roses—La France, if you please. It is a trying shade of pink at best. No matter what are the tints of the wall, the color of the furniture or the tone of the wood-work; no matter whether in the hall, drawing room, dining room, or private boudoir, pink roses, on mantels, on cabinets, on the hall-tree—no matter of what color—pink roses. No chance here for an artistic color combination.

I would discourage every order of this kind where one color only is wanted to decorate the whole house. The case is far different of course where a lady intends to give a pink dinner or tea. Here the surroundings on the table will be, with the assistance of the caterer, in harmony with the prevailing shade of your flowers. But let us now suppose that you are called upon for a decoration, being entirely entrusted to you to execute in your very best style. The house, let us suppose, to be large and modern. Such being the case you will find large and spacious halls and drawing rooms. Starting with the hall, what is the most suitable kind of decoration? In my opinion nothing but plants should here be used. Decorative plants and plants in bloom, bright colors especially are here desirable. The groups of plants, if the hall is quite large, should be so arranged as to give a rich and massive effect, as the guest enters the house, but care should be taken to so place your plants as not to interfere with the proper use of the floor. If you think it is desirable to add cut flowers use only the larger varieties, such as lilies, tulips, etc.

Let us next turn our attention to the drawing-rooms. This seems to me the proper place for the bolder types of roses, such as the stately hybrids, American

Beauties, Jacques, etc. In all well appointed houses you will find the room decorations, furniture and ornaments in harmonious colors. Now let us be careful not to spoil an artistic effect by choosing the wrong shade of a flower in our decoration. It does not follow by any means that if the prevailing color of this particular room is yellow, that the flowers should be yellow, or if blue the flowers should be of the same shade. The most artistic effect can often be produced by using quite a different shade. Leaving the selection of color to the decorator let us proceed. In drawing-rooms or parlors, plants should be used only sparingly and judiciously. Let us remember what we are here for—to decorate. We are not supposed to create a tropical jungle or turn the rooms into miniature flower gardens. Our object should be to add to the beauty of the surroundings and not to detract from them by an obtrusive display.

Turning our attention to the mantels, always the legitimate prey of the florist, do not insist on having it swept bare, often under protest, of all the beautiful bric-a-brac and ornaments with which it is covered, in order to give you a chance at your tropical jungle. Still if you insist, let us go ahead. If the top of the mantel is to be banded, don't pile tier upon tier of potted plants on it. A mantel is not made for that purpose, neither is such a homely piece of furniture that it must be covered up. A simple arrangement of adiantums or ferns of that nature, not so high as to entirely cover up the glass at the back, adding a few handsome specimen roses or orchids of suitable shade, would be in far better taste. But there are a hundred different ways of making a handsome effect, only let us constantly bear in mind that we are simply to decorate. The base of the mantel of course should be flanked on either side with a few handsome palms, and the grate with ferns, adding perhaps a dash of color in the shape of some bright flowering plant. The most tasteful way, however, to decorate your mantel is to arrange your flowers gracefully and artistically in suitable vases, but as Mr. Smyth in his paper has so ably covered this subject before, it is needless for me to enlarge upon it further. Large groups of plants in parlors, particularly when placed on the floor, no matter how large the rooms are, should not be thought of. A few handsome specimen plants of course would add to the general effect and could hardly be dispensed with. Leaving the hall and drawing-rooms we have little more use for decorative plants—but hold, I had almost forgotten, here is something after all that calls for our best efforts to hide, and if you have a penchant that way here is your chance. Pile up your plants high and mass them together thick. The edict of society has gone forth that the

musician must be heard but not seen, so wherever you find him cover him up well.

Let us now take the liberty of having a peep at the ladies' private boudoir and dressing-rooms; as the whole house is thrown open to the guests we are at liberty to enter. Here is where we should use the more delicate kinds of flowers such as lily of the valley, violets and the smaller varieties of roses, choosing such shades only as will harmonize with the surroundings. Never use large or coarse flowers. If plants are used at all choose only a few choice specimens, not large, and set them in handsome jardinières; never allow a dirty pot to show.

But a decoration of this kind is not an every day affair. Carte Blanche orders are the exception, not the rule. In rare cases out of ten you are not allowed to choose your own flowers. The purchaser will choose them for you and you are expected simply to arrange them in good taste. It is with orders of this kind that the florist is put upon his mettle. To make an artistic display of a dozen kinds of flowers, in a couple of rooms, is not such an easy matter as most people imagine, and the greatest care must be taken in the grouping, in regard to color as well as the size of the flower. Never put more than two varieties of flower in one vase, one kind is better. You cannot do better than to follow Mr. Smyth's advice given you in his paper. The use of smilax or other vines for draping should be very judicious. The draping of doors, windows or pictures gives an artificial effect and should not be countenanced.

And now one word about displaying flowers in your show window artistically. It is here we have the best chance to show the public what can be done in displaying a flower to the best advantage, a chance too often neglected by many of us. Most florists seem to think that stock a day or two old is good enough for this purpose. The stuff is piled into the window every way and anyhow—only have plenty of it. I think we make a bad mistake by pursuing such a course. It is far better to have a single vase filled with a few specimen flowers than a big lot of poor stuff. I am glad to say that some of our floral artists here are fully alive to the importance of this matter. You will probably have noticed that some of our enterprising contemporaries have adopted a novel idea in their window display by placing colored cloth in the window for a background and then displaying flowers of a corresponding shade upon it. The idea is a good one and in the hands of men of good taste the effect will be striking and artistic, but let a novice attempt it and the result is often the opposite from that intended. When I saw such an exhibition the other day it brought to mind a remark made by our president on a former occasion: "In striving for the original be very careful not to run into the grotesque." It is comparatively easy to match a *Perle* rose with a yellow background and not very difficult to match a *Mermet*, but when you attempt to match a *Wootton* or *Jacque* with a red background you will run into a snag. Imagine a brick red cloth with a vase of *Jacques* upon it, especially when the latter are beginning to show that peculiar shade of purple we all know so well. But why must the shade of the flower be the same as your background? There are certain shades of yellow that would set this flower off well. Take a pink flower of the right shade against a sea-green or pen-green and your effect is far better than pink itself.

Speaking of matching flowers with dif-

ferent colored fabrics brings up the matter of ribbons on bouquets and baskets once more. I do not approve of ribbons at all and try to discourage their use, but our patrons will often insist on having them put on. Now you have all had orders in your time to tie a bouquet of *Jacque* roses with a red ribbon to match and you have all failed in the attempt. In all my experience I never found a red ribbon yet that wouldn't spoil the bouquet. But why attempt to match it in red when you can so effectively use an apple green, especially where you use *adiantum* ferns for edging, the shade of which can be matched to a nicety?

Let us look at our conventional bridal bouquet for a moment. You have all read in the papers descriptions of fashionable weddings. "Miss Uperton, the bride, was arrayed in a gown of the softest silk trimmed with the daintiest of laces." Never mind what else she wore, it doesn't concern us; but she "carried an immense bouquet of *Bride* roses." "An immense bouquet"—the size, shape and weight about that of a good sized Drum-head cabbage. I can't compare it to anything else. This monstrosity has to be logged around by a dainty bride. But to cap the climax it has to be tied with about 4 yards of 4-inch ribbon. Just note the artistic effect of the heavy ribbon against the airy raiment of the bride. Truly here is a good field for our artist to do some missionary work. From an artistic standpoint the large and cumbersome bouquet must go and so above all must the ribbon.

Now just one word more about the arranging of flowers in baskets. Let us say an every day basket of mixed flowers: A basket of this kind can be made in very good taste even if we use a variety of colors. True, from an artistic standpoint we would not advocate too many colors, but with the aid of a liberal use of good foliage a very good piece of work might be produced. One thing we have to guard against and that is the indiscriminate jumbling of colors and varieties and above all avoid glaring colors. What would be the point of a basket of mixed roses and—*Delphinium* *fornosum*? I have seen a basket of this kind, put up by one of our best florists, a basket arranged to perfection except for the unfortunate use of some of this same *delphinium*. Look at such a basket and you will see nothing but the intense blue. This flower while very handsome and striking by itself is certainly not adapted to combine with yellow, pink or red roses.

The use of foliage in floral decorations is not fully appreciated by many of us and yet it is just as important as the flower itself. We should be careful to select foliage in form and shade of color to harmonize with the flowers we intend to use. But I hear you say there is not very much to choose from, which is very true. Alas, we are handicapped right here. A few varieties of ferns, *Asparagus plumosa* and the everlasting *smilax* about comprises the list to draw from. But we must make the best of what we have. Suppose you have a bunch of *callas* to arrange in a vase, you certainly would not use *adiantum* ferns; there is nothing that suits this flower better than its own foliage, and the same is true of lily of the valley. Let nature be our guide in selecting our types of foliage and we can hardly go amiss.

Since writing the above I read the valuable and highly interesting article of F. Schuyler Matthews in today's issue of the *FLORIST* on "flowers and their color

effects," and let me conclude by quoting the sentence: "It certainly must be a false conception we entertain of color if we do not recognize the emphasis which nature lays on her restful greens. They are a necessary background to all her color effects."

Steamer Basket.

The flowers were put carelessly in this basket simply to give pleasure for several hours. It was sent on board but a short time before sailing, and as is generally the case, they are discarded a short time after they get under way. A string of *Asparagus plumosus* (which has come to stay) was wrapped around the handle, and sweet peas arranged through the green, large bunches of long stemmed pink and white carnations and daisies were used, but no wires. The effect was a little different and rather pleasing.

Possibly it will be interesting to some to know how it was sold. A lady who is generally hard to please, came into the store in a great hurry. Didn't know what she wanted, and sure that we didn't have it. Wanted something for a steamer, but could not wait, sorry we did not have Jacks, because that was the only thing she cared for, etc. Did we have orchids? Sorry she did not order it yesterday. Did not have time now, etc. While she was talking in this strain one of the boys was unpacking a basket of pink and white carnations and daisies. I got down the basket seen in the illustration, and before she had regained her breath and composure, I had the basket finished, and "T was what she wanted." H. H. BATTLES.

Exhibitions.

Never before in this country has so much thought been given to horticultural exhibitions, and the questions, how to make them pay from both an educational and financial standpoint; what are the best methods of advertising; what are the best means of stimulating competitors; the value and number of prizes to offer, etc.

All of these questions are being discussed, but very little is said about the best means of determining the merits of the exhibits. I have attended many exhibitions, and never for a moment have I doubted the honesty of the judges (a thankless task at the best) but am often curious to know what method of reasoning they employ in arriving at many of their decisions.

Take for example the arrangement of cut flowers: the first prize corsage bouquets are often so large that no lady of taste would wear them. Funeral, and original funeral designs, such as: A clock with the hands pointing to the hour of death, and on the base of the design in letters poorly made and poorly put on are the words, "The fatal hour." What a shock that would give a sensitive or sensible person. That hour would be so impressed upon some minds that a clock would never point to it without recalling with great unhappiness "the fatal hour." And the next time death visited that family you would see in the papers, "Please omit flowers." We have also seen broken wreaths made but have never been able to understand their meaning, unless it be to emphasize the sender's belief that the soul is not immortal, but has an end. Broken columns are frequently sent to infants, lyres to politicians, broken ladders to firemen, gates ajar and palm leaves to a man who lived

STEAMER BASKET

a thoroughly bad life, ended his life by killing a woman and committing suicide, and the inscriptions used are, "Rest," and "Oh, death, where is thy sting," "Oh, grave, where is thy victory."

I know of another case where a party of friends while out rowing met with an accident; one of the number was drowned. They went to a florist to order an appropriate emblem. And a boat was decided

upon as being the most likely to suit the sorrowing family.

But still such designs are often seen at exhibitions and receive first and second premiums. The judges could give some healthy lessons and benefit the whole trade if they would not give them any premiums, but rule them out entirely.

And then table designs. How often do we see them so high and massive that

it is impossible to see or converse with the guest sitting opposite; had combinations of color; roses stripped of their foliage and massed together; no room for wine glasses, relishes, etc., and scarcely room for plates; so little, that the decorations would be a constant annoyance to the guests.

We have known a number of cases where flowers have been removed from the table;

generally when they obstructed the view, but several times when their odor was too oppressive. It would be no more out of place to have a brass band in the room, playing so loudly that people could not hear, than it would to build a wall of flowers between guests. But there are so many things to be considered in wisely decorating a table, that can only be learned by experience and actual contact with the work, that the greatest care should be used in selecting the judges that have knowledge on the subject.

I have before me an article cut from a paper of this date which reads: "Corsage bouquets are entirely 'out' this year. All flowers, unless it be one very perfect rose or orchid, are carried in the hand. Women have come to the very sensible conclusion that handsome gowns are ruined by having flowers pinned upon them, while, of course, to fit a cor or cob-wolly chignon, they mean total annihilation."

The florists have themselves to blame for such notices, which do more harm than many imagine. In most cases it is far better to send flowers loose, than attempt to arrange them for corsage bouquets. If a good assortment is sent you can trust any lady to select the proper flowers for the gown, and to wear so that it will not injure the most delicate lace. But the idea of sending a big wad of flowers tied with a long piece of ribbon, not knowing the color or the cut of the dress that the lady will wear, is simply ridiculous, and no wonder that there is a cry against corsage bouquets, as there often is against sending flowers to funerals, when we see designs that a carpenter could make quite as well and with as good taste as a "Maker up," as some workers in flowers call themselves. Now, as to the judges of exhibition, would it not be advisable to select them from men who have had experience in the branch or class of work that is to be judged. Three would be enough; let the exhibits be numbered or lettered; let the judges judge by points as suggested by the AMERICAN FLORIST, and if the exhibits are of considerable importance they could give their reasons for arriving at their decisions. For if they are competent to judge, so are they competent to teach, and if they cannot give good reasons they are not competent to judge. If they are not willing to accept the position under these circumstances, the exhibitors are fortunate in being rid of an incompetent person. A SUBSCRIBER.

The Arrangement of Flowers.

I have read with great interest the comments on the New York show and admire the way in which Mr. Thorpe and "an exhibitor" "speak right out in meeting." They hit several nails on the head and with such force that I have no doubt they will do a great deal of good. The question of who are the best judges of floral art is a very important one and in the different class of exhibits I think judges should be selected who have had actual experience in that class. A grower will be far more apt to see the good points in plants such as shape, foliage, color, size and form of flowers, etc. and so will a person that has spent many years in the arrangement of flowers be more apt to see the good points in their arrangement.

The exhibitor asks if Mr. Thorpe would like to see his chrysanthemums cut off six inches long so as not to obstruct the view on a table decoration. We see no necessity to cut them off at all; we should use *tall slim* vases and allow the beautiful

flowers to fall in their own graceful way above the line of vision, leaving nothing to obstruct the view but the narrow shaft of glass, which is not at all objectionable in such a decoration. We should however put some low arrangements on the table in addition.

Who are Mrs. Astor and the Messrs. Vanderbilt that we should go to them for instructions as to the most artistic way to arrange flowers? Did they tell the artists how to put the paint on the pictures that are hanging on their walls? Did they tell the wood carver how to do his work, or the upholsterer how to drape their hangings, or did they give instructions how to blend the colors in the Gobelin tapestry that their money has enabled them to buy? We should be very glad to furnish them with all the flowers they use, but if they asked our opinion or if they left the whole work to us we should not arrange flowers for the table that would not allow them to see the guest sitting opposite.

I positively agree with "an exhibitor" in his remarks about the corsage bouquets. Why they should have ribbon on them I cannot understand. The boutonnières I think have also ribbon on them. We have done this a number of times for college or class colors, but never for an ordinary corsage or buttonhole bouquet.

Apropos, to ribbon, I think it is the abuse and not the use that is objectionable. Take a hand bouquet for instance, a handsome piece of ribbon if the color matches the flowers or dress, to my mind is in perfect taste and gives a finish to the bouquet. And on a basket, if it has a meaning, such as fastening flowers to the handle I do not think it objectionable. We have used large silk cord with good effect in many cases, but when we see it we try to see that it has a meaning.

H. H. BATTLES.

Pandanus.

Some two or three species of this interesting family of foliage plants are very well and favorably known among the trade for general use as decorative plants, and these doubtless comprise the best of the genus for general use, but for specific purposes some of the remaining species may well find a place, the majority being highly ornamental in all stages of growth.

Of course Pandanus Veitchii may be considered the pandanus for the florist, and with good reason too; its beautifully striped and graceful foliage giving a good effect whether it be used as a single specimen or in combination with other plants, and being easily grown and readily propagated (providing all available cuttings are put in from time to time), it has naturally taken a prominent place among regular decorative stock.

To grow the most shapely plants of this species it is well to put in small cuttings, the latter usually giving the best result, and also rooting more quickly than large sappy shoots, and in order to keep the plants in good condition they should be potted on as the roots require it, at the same time giving all the light possible without burning the foliage.

P. Veitchii may be grown on very rapidly by giving strong heat, but this practice may be over-done and the consequence be soft foliage and a want of clear coloring.

The second best species undoubtedly is P. utilis, an admirable plant when well grown, but a miserable thing if in poor condition.

As is well known, this species is multiplied by means of seeds, the latter being

imported in large quantities by the leading seedsmen and growers, and if fresh, germinating in a period varying from six weeks to three months.

The seed should of course be placed in a warm house, and some little care given to prevent the soil becoming sodden, as in the latter case the seeds are likely to fail. This plant does not produce any suckers or side shoots while in the small state as does the previous variety, and consequently cuttings are seldom used.

P. javanicus variegatus, or as it is now known, P. candelabrum var., is another pretty variegated species, though much inferior to P. Veitchii.

The leaves of this plant are much longer and narrower than those of P. Veitchii, quite pendulous in habit and handsomely striped with white, but have the disadvantage of being much more profusely armed with spines; those on the under side of the midrib being recurved in the opposite direction to those on the margin; this being a decided objection when it becomes necessary to pack a plant of such character among other plants in a wagon, or for shipping away.

This species also suckers freely, thus being easily propagated, and with plenty of light and moderate heat can be grown rapidly.

A pretty species for small work, such as window boxes, or even in small ferneries is P. graminifolius, a neat-growing plant of dwarf habit that has long been in cultivation.

It has dark green leaves about one foot in length, and half an inch wide, these being armed with small white spines, and the habit of the plant being tufted or freely branching it soon becomes of a useful size in fact pretty little plants may be grown in 3-inch pots.

As a large plant, P. graminifolius is of little value to a florist, but as cuttings seldom fail to root when placed where they will receive some bottom heat there is no difficulty in keeping up a stock of serviceable young stock.

Among the rarer species that are better suited for large specimens for exhibition purposes, P. heterocarpus (or ornatus) is notably good. It has somewhat the habit of P. Veitchii, but the leaves are plain dark green in color, and reach a length of five to six feet.

This species is propagated by seeds, and I have never seen it produce suckers, though the latter may possibly occur when the plant attains fruiting size.

P. Vandermeeschii may be briefly described as an improved P. utilis, being stiffer and more erect in habit, while the leaves are broader and chiefly of dark green color, the midrib and edges being brownish red, and the young foliage frequently somewhat glaucous. P. Vandermeeschii makes a remarkably handsome specimen and is well worthy of more extended cultivation.

The few species to which reference has been made do not by any means exhaust the list, though comprising those of greatest interest to the commercial grower, but many of the members of this genus are only found in botanic gardens or other extensive collections of like character, and would probably be of little value for our purpose.

W. H. TAPLIN.

The Violet.

Propagation: Two systems of propagation are practiced. For the one case the crown of the old plant is subdivided into as many single crowns as it admits, the single crowns are then potted into small pots and kept in a cool greenhouse

SPECIMEN PLANT OF *PANDANUS UTILIS* IN THE CONSERVATORY OF THE
ALLEGHENY CITY PARK.

or cold frame until planted out to make their growth during summer. The second and the best method is that of taking cuttings from the growing plants during February and March, place them in sand having a temperature of 65° and the house not to be warmer than 55°. If careful attention is given to watering, airing and other details the cuttings should be rooted in three weeks. They are then removed from the sand, potted into small pots and placed in a cool greenhouse. By May the young plants should be in condition to plant in the open ground.

Planting: The ordinary method is to set the plants out six inches apart in the rows, and twelve inches between. During the summer every attention should be shown the young plants, as the object is to have strong, healthy specimens by fall in order to insure quality and quantity of flowers for the winter months.

Cultivation: The ground should be kept thoroughly clean and open by frequent hoeing, all suckers and dead leaves should be carefully removed, and where possible during very hot, dry weather they should be watered towards evening. If proper attention has been given the plants during the summer they should be, by the first of October fine strong plants loaded with buds and in condition to be removed to either the cold frame or a cool greenhouse. If removed to the former, air should be given during the winter whenever the weather permits, and the plants should be kept clean as during the summer months. To have them in flower, however, requires a good, sunny greenhouse.

The violets when removed from the open ground should be lifted very carefully so as not to disturb the roots more than necessary. They should, when taken to the greenhouse, be planted on benches containing not more than four inches of light, rich soil. The temperature of the house should not exceed 45° at night; during fine days the air can be allowed to reach 55°; but should the day be cloudy a temperature of only 45° should be maintained. By careful attention to ventilating, watering and cleaning very fine violets should be obtained, which will amply repay for the trouble, care and anxiety they have given during the summer.

Owing probably to being somewhat weakened by over forcing, the violet has developed during the last few years, several killing diseases, and at one time it seemed as though this beautiful little flower would no longer be seen during the winter months; but this calamity has evidently been averted, largely through the fact that new localities have supplied the market to a limited extent, while the supply has nearly ceased from localities where the violet once reigned supreme.

The disease that has proved so troublesome and destructive is due to small encased nematoid worms, which eat into the center of the crown and either debilitate or entirely destroy the plant.

The violet when once weakened becomes an easy prey to several fungi, which grow on the stems and leaves and on the sepals and petals of the flowers; among the most injurious are the following: *Phyllotecta* Violet, *Urocystis* Viola, *Puccinia* Viola and *Cercospora* Viola.

Among the best varieties for forcing purposes the following can be recommended: Marie Louise, lavender, blue and white, very double and sweet; the Neapolitan, pale lavender, very light, double and sweet; Comte Brazza, white, double, sweet scented; The Czar, blue, large, single; White Czar, a white form of the Czar; Queen of Violets, white, flushed with pink, double; Russian Blue, single, large, very free; Victoria Regina, blue, double, large, fragrant.

It is to be hoped that the violet disease will be arrested, in fact there are indications that it is on the wane, for during the last winter a larger proportion of flowers have come to the New York market from Long Island and New Jersey than at any time since the disease first appeared in 1882.

JOHN H. TAYLOR.

Bay Side, N. Y.

A Big Crop of Out Door Violets.

The figures of crops of the different flowers given from time to time in your paper are interesting and to this end we submit the following example of a one seasoned kind of double violet, grown out of doors without protection other than a few dry oak leaves, that in our estimation is worthy of thought among flower growers for the market.

It is well known that as the hot days of spring approach violets of a perpetual blooming character like the Neapolitan and Marie Louise grow smaller and smaller until they cease to furnish flowers enough to pay for the picking.

Now as the "violet season" of native kinds is then just coming in and the streets full of them, their lack of fragrance so grateful in the offspring of the *V. odorata* class is likely always to create a demand for the "sweet violet" so long as the violet season lasts.

Richard J. Donovan, a Chicago grower, has for some years been nursing a batch of the double Russian violet on trial out of doors and at last appears to have struck the key note of success. The principal objection heretofore to their full acceptance in the market was a shortness of stem and enough at a time to make a market.

His bed now is 150 feet long by 6 feet wide, two years planted. The picking commenced this year April 25 and ended May 9, with a total pick of 34,000, which fetched readily 60 cents net per 100, or a total of \$204, a neat little sum from so small a space (and as it happened in his case otherwise useless ground) and well worth looking after.

To show the range of picking we give his figures:

April 25.....	550	May 4.....	3,000
" 26.....	1,400	" 5.....	3,100
" 27.....	1,050	" 6.....	1,900
" 28.....	2,100	" 7.....	1,500
" 29.....	3,000	" 8.....	1,600
" 30.....	3,000	" 9.....	2,350
May 1.....	2,700		
" 2.....	6,750		34,000

The Russian Violet: As is well known the sweet violet of Europe, *V. odorata*, is common as far north as Siberia. It is not unlikely that those of a northern type are a harder race than those of a southern. The first notice we have been able to trace of a Russian violet is in 1828, when the name appears to have been new and questions asked respecting it. This was a single variety. Twenty years ago or so many in the trade catalogued them about as follows: Violets, Russian, double and single; and that is about all the reference we can find either in this country or in England.

The Russian idea in name of Czar, Shoenbrun and some others was quite common among singles. Somewhere about the same time one called King of Violets, a large dark double blue also came out. But whatever may be the origin of the one Mr. Donovan has under the name of "double Russian" it has the characteristics to be sought for. These are first, hardness, so as to preserve full leafage, to get the flower stems as long as possible; second, thoroughly one season, so as to get a heavy crop in a short space of time; third, large size and a very deep color. All these this kind has in an eminent degree.

How these are grown: A portion of Mr. D.'s land is one of the scruboak ridges covered with rather small scrubby oak trees. In this is a slight natural depression, partially denuded of trees. Here the violet bed is made. It has thus partial shade in summer and partial protection in winter from the persistent foliage of the oak. The leaves that fall are allowed lightly to cover the plants.

The consequence of all this is a full old leafage of the violets in the spring. With this partial shade causes the flower stems to extend well upwards, all of which Mr. D. claims is essential as well as a rather close growing of the plants together for the same purpose.

The violet of Europe is classed by botanists as among the hill or rock plants and this dry position probably of a sand bank is favorable. Of course a good soil is given them to grow in and we observe a rather liberal mulching beneath the leaves when it can be applied of a rotten compost mostly of manure.

EDGAR SANDERS.

Long Island Notes.

BY WM. FALCONER.

LYCHNIS VISCARIA FL. PL.—A lady and her gardener were here the other day. We had a clump of this catchily in bloom and her eye caught sight of its vivid blossoms. "Oh, Adam," she exclaimed, "don't get any of that plant, whatever it is, for I cannot bear the color!" The color is described as "brilliant scarlet," "rosy red," "bright rose," etc., but there is purple in it, and I find that among refined people there is quite a prejudice against magenta, solferino and purplish red colors generally. At the same time I myself like this plant, for it is hardy, neat in habit and free blooming and it is in perfection about Decoration day, for which trade our local florists grow it largely.

WHY DON'T YOU ADVERTISE?—A neighbor of mine, a mail trade florist, ran short of Phenomenal, Mrs. E. G. Hill and Storm King fuchsias, to the extent of several thousands and wrote hither and thither for stock, picking up a few dozen or scores here and there, but never getting nearly enough for his demand. And he kept a sharp eye on the adv. cols. of the Florist every week without avail. And here comes a florist from Wisconsin, who tells me a firm in that State is carrying an enormous stock of these same fuchsias, and hasn't got rid of half of them. And why? My neighbor didn't advertise for what he wanted to get and the Wisconsin men didn't advertise what they wanted to get rid of, so both have had to suffer inconvenience and loss. You all may have what you consider stock enough when you issue your catalogue, but you know how trade will run here on some things, light on others, and you soon may run short of some things and have an overplus of others. Then is the time

to advertise for what you wish to get, also for what you wish to get rid of.

VARIEGATED-LEAVED FUNKIAS are now in their prettiest condition and very ornamental. And as they are perfectly hardy, long-lived, easy to grow and easy to increase, they are not bad stock to handle. Don't you remember when we went out to Mr. Hunnewell's beautiful garden near Boston at Convention time last year what a lot of the little much variegated *F. undulata* he had as edgings to the pathways in half-shady places and in clumps about the rockeries? Now, that visit of ours gave quite a boom to this little plant because we saw it there in good condition and admired it and at once concluded it was a good thing to have. But it isn't the only variegated funkia that is worth having. I have now the variegated forms of *F. cordata* and *F. lancifolia* as handsome as fancy caladiums; and clumps of the noble *F. Sieboldi*, which has immense glaucous leaves, handsomer than one-half of our fine-foliaged tropical plants.

DOUBLE WHITE PYRETHRUMS.—A florist at Queens who has a large stock of these is getting a cent and a half each for the cut flowers at wholesale in New York. And the double white one is the easiest to grow and increase.

INERIS CORREFOLIA is one of the handsomest of the hardy perennial candy tufts, and just now, a little while after *I. sempervirens* is past its best, is one sheet of snowy blossoms.

HEMEROCALLIS DUMORTIERI under its old name of *H. rutilans* is grown in quantity by some of our florists, and deservedly. It is a hardy perennial, now in bloom, and has orange yellow flowers tinged with brown on the outside. And still they will search from Jessé to Mozambique for novelties, while from their own back yard this beautiful plant appears to them in vain for recognition.

Some Useful Climbing Plants.

Stephanotis floribunda. This is a very free growing plant provided it has plenty of root room. Its beautiful waxy flowers, pure white and equal in fragrance to those of the jasmine, are very useful for fine floral work, and in England are used extensively by bouquet makers, especially so for bridal bouquets. It can be grown planted out in the border and trained over the roof of the greenhouse or else planted in a large pot or tub and trained on a trellis. It does best in a mixture of light fibrous loam and peat with a moderate amount of well rotted manure added to the soil. Be sure and give it good drainage and in spring and summer when growing freely abundant supplies of water. During the winter water sparingly, but do not let it get too dry. It is very subject to the attacks of mealy bug and therefore should be watched closely and as soon as any are seen should be sponged immediately, as they will destroy the flowers if allowed to remain undisturbed. It is easily propagated from cuttings.

Passiflora princeps (syn. racemosa). This is a noble greenhouse plant and its racemes of bright scarlet flowers are unsurpassed for decorative purposes. It is of very free habit and when it is planted out it is a rampant grower and stands any amount of cutting. I remember one many years ago that was planted out in a greenhouse and trained to the ridge pole. It extended the length of the house and was never out of flower, and for

years the only attention it got was a barrow load of manure at the roots once a year and an occasional soaking of water. It can be propagated from cuttings, but it makes much stronger and better plants if it is grafted on *P. edulis* or *P. quadrangularis*, as the latter are so much stronger rooters than principles.

Rhynchospermum jasminoides. This is a very old but useful plant, useful alike for floral work or as a decorative plant. When trained on small trellises it is useful for forcing and can be had in flower in the winter and early spring. In its general habit it resembles the jasmine. The flowers are produced in clusters, are pure white and very fragrant. The soil most suitable for it is a mixture of peat and loam. Being a native of Japan it does well in a cool house.

Bougainvillea. This is without doubt the most showy stove or warm greenhouse climbing plant in cultivation and the bright colored bracts of rosy flowers are very useful for cut flowers, especially for vases, large baskets or festooning pictures or mantels. It is impossible to describe the gorgeous beauty of a large plant of it when in flower, it must be seen to be appreciated. They are all of free growing habit and soon cover a large space, but should be starved at the roots. Therefore those that are planted out should be confined at the roots, and during the winter should be kept completely at rest, keeping almost dead.

B. glabra makes a very satisfactory pot plant. It requires thorough resting during winter and must be pruned early in spring and started in a brisk heat when it will soon show its beautiful rosy bracts and continue flowering through the summer, producing an abundance of flowers on every shoot. It does best in a light fibrous loam and is readily propagated from cuttings taken from the half ripened wood, put in a good bottom heat.

B. speciosa is much larger and stronger than *B. glabra*. The stems are branched and are provided with large serrated spines. It bears very large panicles of delicate rose, and when in full flower covers the entire plant with a mass of beautiful coloring, the effect of which is indescribable. This plant should be planted out and it may be several years before it flowers freely, but when it does begin it will continue to do so and amply pay for waiting. It should not be pruned more than to keep it within bounds, and then only in spring before the growth commences.

Maywood, N. J.

JAS. S. TAPLIN.

The Mosquito Catcher Plant.

Rejoice New Jersey and be glad Long Island, the music of the festive mosquito has been changed to an agonizing wail, for out of the Flowery Kingdom has come a trap for the unwary, and the blood-thirsty rascal pays for his supper with his life.

It belongs to the milk-weed family of plants and is known botanically as *Vincetoxicum acuminatum*. Generically it has both good and bad relations, for instance the showy *Asclepias tuberosa*, the favorite hoy and the delightful *stephanotis* all belong to the same family, and so too does the fetid *stapelia*.

And this mosquito catcher is a real pretty, hardy, herbaceous perennial and well worth having for its beauty as a garden plant. It grows about 18 to 24 inches high and forms a good bushy clump of somewhat slender shoots that have opposite leaves and axillary loose clusters of starry white blossoms that

THE MOSQUITO CATCHER PLANT. [VINCETOXICUM ACUMINATUM.]

are borne abundantly in May and June and scattering all the summer. In the centre of the flowers in the clefts of the corona is secreted a viscid juice which is peculiarly attractive to mosquitos and some other flies, but woe be to the unwary, whoever dips his proboscis into the alluring liquid never draws it out again for it is held fast and no amount of tugging and plunging and buzzing will free the insect from its cruel captor. Mosquitos often live for two days or more in this trap, but once caught they never escape.

Now here is an interesting, beautiful and useful plant. It is of little avail for cut flowers as it wilts soon after being cut, but if you wish to attract the attention of the children what plant can you place before them that will interest them more? Your own little boy or girl will bring around every little play mate and acquaintance it can scrape up to see the Japanese plant that catches mosquitos. And not only do they see the plant itself, but the mosquitos too that it has caught. It is an indelible object lesson, and there isn't a boy or girl in the country who doesn't want one of these mosquito plants for him or herself and another for his or her mother. Then why don't you, like the world renowned Barnum, do something to please the children? They want mosquito catcher plants. W. F.

ONE of the features at the recent rose festival at Los Angeles, Cal., was "the hanging gardens of Babylon." This might be suggestive to the decorator searching for new ideas.

YOU WILL benefit the FLORIST by mentioning it every time you write one of our advertisers.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XXVIII.

A CUT FLOWER CONTRACT.

In trouble with one of your customers, are you? Well, the world is full of trouble; it began early and will last late.

You say this is a question of construction of a contract. I am not surprised that you business men have trouble in construing your contracts, for two reasons:

First, you enter into them without looking ahead to examine all their possible bearings. Secondly, you don't hesitate, when once in them, to make modifications, or in other words, contracts upon contracts, until the confusion is such, that not even a member of the Blackstone family can see any way out of the medley.

Good, I have listened attentively to you; your contract was as follows:

Your customer agreed to take all your cut flowers for four months, payment to be made on the first day of each ensuing month.

The account was paid only once according to the contract and then the customer made default. You continued to supply him however, for two months longer, and then gave him notice that unless all back indebtedness was paid up, you would discontinue shipment, and as your notice called forth no response you did actually discontinue shipment and begin to deliver your merchandise to a commission man.

In other words, you regarded the contract as at an end, as you had a right to do.

Now let us look at your position at

this moment. What was your remedy? It was a twofold one. You could have continued to ship the customer the cut flowers until the end of the four months and then sue him for all sums due on the contract. But you preferred to give notice of your intention to rescind the contract on account of his default in payment in accordance with its terms.

Your other remedy was to regard the contract absolutely at an end and to sue for all sums due to the date of the default. But you did neither of these two things, for after two weeks, upon receipt of a part of the money due, you resumed shipment just as if no default had been made by your customer, and continued to ship until the end of the four months. In other words, by accepting his money and again shipping to him the cut flowers you acknowledged the contract to be still in existence.

Now your customer takes the position that you must make good to him the loss sustained by him by not receiving any cut flowers during the two weeks above referred to. Such a claim is preposterous and to concede it would be violating one of the elemental principles of law, that no man shall profit by his own acts of negligence or default.

To understand exactly the legal questions involved in this business transaction let me explain that there was first a contract fixed and definite in its terms; then a repudiation of it by you for good legal cause; then a tacit but actual resumption of it by the parties to it.

Now the two weeks must be belittled from it entirely, just as if they never existed, for by resuming operations under the contract, without giving each other any notice of claim for damages, you simply rehabilitated what had ceased to be of any binding force upon you.

Your customer can have no claim for damages against you for the reason that the contract was abandoned by the parties to it for the space of two weeks. During this time he received no merchandise and had no merchandise to pay for. But he may add: Not having the cut flowers, I could not fill my contracts and my customers hold me responsible. This is the result of his own default and he cannot be permitted to take advantage of it.

A contract once entered into continues until it is lawfully ended. It may expire by its own limitation. It may be ended by the default of one of the parties. It may prove to be too hard in its conditions to be performed. It may have originated in fraud. It may be ended by the consent of all the parties to it, or in some cases by the death of one of the parties.

This contract was ended by the default of one party with due notice given. True, it would have been more business like to have made a fresh start with a new contract, and then all chances of claims & damages would have been cut off. As it was, the old contract was revived and your customer was responsible to you for all merchandise delivered under the original contract; that is, up to the full term of three months and a half.

But suppose we admit his claim for damages; then arises your claim for losses sustained and you see the one offsets the other in equity.

I need hardly tell you that it would have been more business like for you to write your customer upon receipt of a payment after default: "Dear Sir: Yours received, covering check for \$50, on acct. of merchandise shipped you. There must be a new memorandum of terms, prices,

etc., before I can ship you any more goods. Shall I ship you from this date in accordance with the terms of the old contract?"

In other words, you should not have complicated the transaction and thus given rise to claims for damages.

Yes, I understand, it is the old, old desire to do business, even at a risk of complications. Taking the chances, men call it, and a very bad thing it is sometimes, to take the chances. The trouble in all such transactions as this is that the customer has had the merchandise and you have not had your money.

You are put to the expense of an action at law to collect, and the matter is still further complicated by the fact that your customer lives possibly a hundred miles away and you must entrust the matter to a stranger. You can't give it your personal attention. In this case, a little caution would have saved you all this trouble.

You must bear in mind that a letter and the reply to it, make up a contract, and if you are careful to keep prescopies of your letters, you have a complete statement of your case when you come into court. This is the only true business way. The moment a man takes a thing for granted that moment his trouble begins. True, men get along for years without a scratch of a pen between them, but what good is all this if the trouble comes in the end after all? State the terms of sale fully in your letter and don't ship until you receive a reply accepting the terms and conditions.

The Nomenclature Committee will meet in session at the Queens Hotel, Toronto, at 9 A. M., the day before the S. A. F. convention takes place in that city next August.

The Nomenclature Committee.

Now that the rush of spring business is over please try to help us. In helping us you are helping yourselves and every florist in the country. If you know of any case in which plants are being disseminated under wrong names bring it to our notice; no matter whether these cases are accidental or intentional, let us know about them. We wish to get up a good report and will do our best towards it, but if you do not help us our efforts will be as 13 to 6,000; but if you all set to

help us our report will be worth listening to, and as 6,000 to 13. Please address any member of the committee you choose.

And as one or two prominent garden amateurs have kindly written to me about the Nomenclature Committee work, I wish to say to these and all others, that we invite and heartily appreciate their co-operation with us.

WM. FALCONER.

Chicago.

At the last meeting of the Florist Club in the discussion of Mr. Bentley's paper on the arrangement of flowers, which appears elsewhere in these columns, all practically agreed that there was need for a larger and more varied supply of foliage for use in arrangement, but the majority expressed doubt as to the willingness of flower buyers to pay an adequate price for such supply. Several maintained that it would be useless to attempt to charge for "green"; that in the majority of arrangements the customer ordered a certain number of flowers, and the work of arrangement and any accessories necessary to complete it must be "thrown in" without charge. But one speaker, who grows some of the flowers he retails, said that he had been able to sell his carnations at a considerably increased price by mixing a few sprays of carnation foliage in his bunches of these flowers. He said that his customers told him his prices were higher than those of other florists but they liked the additional foliage well enough to pay the difference. He maintained it didn't make any difference how you got a fair price for the foliage so long as you got it. But the majority of those who took part in the discussion were of the opinion that the great mass of flower buyers would have to be made to better understand the fact that the cost of producing good foliage was about equal to that of producing good flowers, before its production could be made profitable. All admitted a rapidly growing demand for foliage and their opinion was general that no foliage was better to associate with a given flower than that from the plant on which the flower grew. The necessity of having the foliage used in arrangements properly "hardened" so that it would last well was also mentioned.

During the discussion one member spoke disparagingly of certain floral designs, sometimes made up, which are supposed to represent objects used by, or suggested by the occupation of the late lamented life, such as firemen's hats and ladders, street cars, telephones, locomotives, patrol wagons, etc. He considered it the duty of florists to dissuade customers from ordering such designs, and under no circumstances to suggest them. All assented that such designs were not to be encouraged, but one storekeeper said that if a customer came into his place when he had an icebox full of flowers going to waste and wanted a horse collar or some such monstrosity made of flowers and would pay good money for it, he feared that his desire to maintain the dignity of the profession would succumb to the demands of the cash drawer. But all bore witness to the fact that the demand for such designs was rapidly decreasing, indicating continual improvement in the taste of flower buyers.

No further action was set by the committee of the World's Fair Directory. The report that nothing would be done until June 9 was apparently correct.

Trade last week was very active. Dec-

oration Day was by far the busiest day the trade has seen for many a year. With a fairly good supply the market was entirely cleaned out by Friday night. Beside a good local trade there was an extraordinary demand from the country; every dealer was as busy as a bee and happy as a lark in consequence. Prices of course jumped away up, at least at the majority of the commission houses the prices of most every kind of flower had doubled. Two or three of the wholesale men be it noted only advanced their prices on roses on the average of about \$1 per 100.

Saturday, Decoration Day, prices began to climb downward, stock plenty and demand slack. American Beauties and Jacques are more plentiful and the quality is fairly good.

Roses of every kind are in fair supply, and probably as good quality as might be expected at this season of the year. Owing to the demand for white and light flowers, Brides and Niphetos were rather scarce. This accounts for the high prices these varieties brought.

Snow balls were the stand-by to the retailer, on account of the scarcity of white carnations this season. They were used in designs for cemetery decorations. Cape Jasmines are plentiful; some very fine ones bring \$2 a 100, poor to medium can be bought for 50 cents to \$1.50 per 100.

Boston.

The greatest surprise in Decoration Day supplies was the abundance of carnations, especially the white ones. Prices on these went to pieces at the last hour, and on Decoration Day Tremont street was fringed on both sides with boys, each displaying a big basket of carnations, the supply of both boys and carnations seeming to be next to inexhaustible. Roses sold out clean and many more might have been disposed of, if they could have been obtained. In hardy shrub flowers and other out door stock there was a good assortment, much better than was expected, the steady cool weather having sufficed to keep over the dentzias, snowballs, lily of the valley and even some of the lilacs. The day preceding the holiday was disagreeable and rainy, the retail sales being curtailed in consequence, but the prevailing opinion is that the trade has been in general equal to that of last year, and quite satisfactory all around.

There are a great many weddings to take place in June, and this fact, together with the increasing use of bouquets and baskets for school graduations insures a good and profitable trade throughout the coming month. With average June weather the prospects are that out door roses will be earlier than the average. The great Rose and Strawberry Exhibition of the Massachusetts Horticultural Society will take place on June 23 and 24.

W. J. S.

New York.

Trade during the early part of the week was very quiet, but the increased demand for Decoration Day changed the condition of the market considerably.

Flowers of all kinds found a good market. White flowers especially were very scarce. The average prices obtained were much better than last year.

The decorations at the wedding of Miss Evelyn Baker to Harold St. John, 258 Madison Ave., were executed by Mr. Stump. The mantels were banked with LaFrance roses. The temporary chandeliers were filled with choice palms and ferns.

VICTORIA EMBANKMENT GARDENS, LONDON.

Around the couple was a bower of Madam Cusin roses, trailing from this were garlands of lily of the valley.

In the dining room there were thirty-six tables decorated principally with American Beauty and LaFrance roses. In the hallway were hung garlands of roses and Asparagus tenuissimus. Mr. Stumpp spoke of this decoration as one of the finest he had this season.

Mr. and Mrs. Robt. C. Patterson of Pittsburgh, are visiting us this week.

On Wednesday, May 27, Mr. James Weir died at his residence, Bay Ridge, L. I., in the 84th year of his age. Mr. Weir was one of the pioneer florists of Brooklyn, and was senior member of the firm of James Weir & Sons, Brooklyn.

Sarah E. Benz, wife of Albert Benz, the famous pansy grower, died May 28, at Douglaston, L. I., after a very brief illness. Mr. Benz has the sympathy of all florists in his great affliction.

JOHN YOUNG.

Buffalo.

Scott effectively decorated Music Hall, stage and boxes on occasion of the May Music Festival recently. Laurel roping and curtains, and a row of foliage across the stage supplemented by groups at each end, were employed.

Our general, the genial and gentle Thorpe, was our recent guest. Prof. J. F. Cowell more particularly doing the hospitable. The big-heartedness of the latter projected an excursion to the far-famed Valley of the Genesee, which included a visit to Portage Falls, the noted high bridge over the gorge, deep or high enough to be called a canon in the West, and the extensive eight hundred acre tract of wild growth and scenery named "Glen Iris." This, through the munificence of its owner, Hon. W. P. Litchworth, the noted philanthropist, is

thrown freely open to the general public.

The party, consisting of a sextette, as follows: Thorpe, Cowell, Scott the great, Mepsted, D. B. Long, and last, but not least, modest Wm. Mott, of the Quaker City. After a two hour's ride and listening to impromptu dissertations on botany, hybridizing and (coal-d) storage, of which much was seen near Buffalo, the party did ample justice to the appetizing dinner set forth by our host Varicke, who in his extended peach orchards, strawberry beds, and well trained clumps of lilacs about the premises shows himself to be competent in horticulture as well as hotel keeping.

An extended ramble through the glen followed, up and down, in and out, each turn showing a picture of nature's growth vied only by its successor. The last Indian built council house, occupied in its time by the Senecas on these grounds, and near it repose the mortal remains of Mary Jamieson, a white woman who had been captured by the Indians in childhood, and whose later career, and the vicissitudes she passed through before her death, at ninety-two years of age, form an interesting chapter in the early history of Western New York. Her grave was reverently strewn with wild flowers before our general took himself from its locality. The botanical specimens secured by the brighter lights were numerous. The manner in which Cowell's and Thorpe's eyes lighted on small but choice things and specimens of *Cypripedium acaule*, where the rest of us would see ordinary wild growth only, was surprising. The valleys and scenery so entrancing left no time hanging heavy before the return at 5:30 p. m. The Warsaw Valley, dotted by numerous salt works of recent build, showed beautifully in the waning sun light. The water supply reservoir at this place, close

by the railroad, came in for its share of attention at the instance of the professor's most sober statement that in his younger engineering days he constructed it, and sad to state, evoked a wicked criticism from Scott on its unfinished appearance. The city was reached again at sunset, and the Cowell excursion voted a success with many thanks to its projector.

Roses at fivecents retail, are offered by a prominent Main street florist, and good quality Perles, Mermets, and the like at that. Is it any wonder we don't need the fakir to help us to lower the prices?

L. B. D.

New Plants.

To me has been assigned the preparation of the report on NEW PLANTS to be read at the Florists' Convention in Toronto next August.

As you all know, no one man knows all of the new plants or about them, at least I do not. But as this report should be full, comprehensive and impartial, I earnestly invite the assistance of every florist and other horticulturist. From me alone you cannot expect or get more than my own opinion of the New Plants I know, but if you tell me about the New Plants that you know and have tried, then I will include your report with my own and give you full credit for it. And while I shall very much appreciate the reports of specialists in orchids, palms, ferns, carnations, chrysanthemums, bedding and other popular plants, I also am anxious to get all the information possible from other growers. Please note that I ask for this information and assistance so that I may compile it and return it to you in the form of a report on New Plants at our next convention.

November —, Germantown, Pa.—Chrysanthemum show Germantown Hort. Society.

A copy of the premium list for the second annual chrysanthemum show of the Toronto Gardeners' and Florists' Club, to be held Nov. 10 to 12, next, has been received. Copies may be had on application to the secretary, Mr. A. H. Ewing, 276 Victoria street, Toronto, Ont. The copy we have received encloses an entry blank, and we take this occasion to call the attention of the many organizations who neglect this detail to its value. You will have to have an entry blank printed anyway, and an extra thousand or so costs but an insignificant trifle, therefore have them printed when you get up your premium lists and mail together. The absence of the blank at the time the premium list is received and the trouble of sending to the secretary for one, may be the trifle that will lose a good exhibit. To have your premium list at its best work, everything should be complete when it reaches the recipient, so that if in the mood he may at once jot down the classes in which he may think of competing. It is a simple matter to afterward mail additional blanks on request to those who may have overlooked those first received. Printed matter is cheap, especially additional copies, after the type has once been set, and we believe that it would be well for the managers of all exhibitions to mail both premium lists and entry blanks more than once to the same individuals. For the chrysanthemum shows the list should have been mailed before this date. But along in August, when the matter has dropped a little out of sight with some, and the premium lists, blanks, etc., have probably been mislaid, if another one reached them, it would bring the matter freshly to mind and probably secure additional exhibits. And a third one in October, only a few weeks before the exhibition would be a good time to mail still another, always enclosing entry blanks. It would then be too late for any preparation, but the recipient might have something in hand that needed no preparation, and if he had something, he had begun to give up the idea of showing it, this reminder might be the straw to throw his decision favorably to exhibiting. It is in the nature of advertising. It pays to advertise rightly, and we believe this is 'the right way for managers of exhibitions to advertise in order to secure exhibits. Don't give any possible exhibitor a chance to forget the exhibition and its possibilities, and the cost of the several remailings as noted above is very slight, while the possibilities are large.

THE second annual banquet of the trustees of the Missouri Botanical Garden, under the provisions of the will of Henry Shaw, occurred at the Mercantile Club, St. Louis, the evening of May 21. Eighty guests were present. Bishop Tuttle acted as toastmaster and responses were made by Prof. Waterhouse, of Washington University; Hon. John W. Noble, Secretary of the Interior; Hon. George Lawson, Secretary of Agriculture of Nova Scotia; Mr. Given Campbell; Prof. C. V. Riley, U. S. entomologist; Congressman Niedringhaus, and Professor Coulter, of the Indiana State University.

MR. H. W. BUCKBEE, the florist and seedsman of Rockford, Ill., passed through Chicago last Saturday on his way home from California where he and his wife spent the winter. Mrs. Buckbee did not return with him; she will remain on the coast for at least a year, for the benefit of her health.

SOME SPLENDID blooms of *Gardenia florida* were recently received from Mr. R. Nicholson, of the Fort Worth Nursery and Seed Co., Dallas, Texas. Though sent by mail they arrived in excellent condition, but they were very carefully packed.

ONE OF the novelties in the parks of Allegheny City, Pa., this summer is a bed in which the head of a lion is depicted in echeverias.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash in advance. No money order. Plants, etc., not admitted under this head.

The Good Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOCH, Cincinnati, president; JOHN FORTRESS, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

MR. LEM BOWEN, of D. M. Ferry & Co., will make a European trip for the firm this summer.

The executive committee of the Seed Trade Association are said to have arranged a carefully prepared programme for the Cincinnati meeting.

THE A. B. CLEVELAND SEED CO. have removed their head office from Jersey City to Cape Vincent, N. Y., where they invite the trade to visit and inspect crops.

THE A. C. NELLIS CO. affairs are still badly mixed. The latest move is the arrest of Mr. A. C. Nellis on a charge of forgery.

THAT HARD DAY for seedsmen, June 1, is again at hand. Let us hope the past good season has brought the boy through with a good balance on the right side of the ledger. Of course we shall hear all about it at Cincinnati.

Washington.

Orchids are evidently becoming great favorites at the White House. During a recent visit to the conservatories there I observed several hundred plants of different varieties, among them a group of some twenty-five cattleyas in bloom, a superb specimen of *Sobralia macrantha* and an exquisite *Dendrobium filiforme*.

The space in Lafayette Square facing Pennsylvania avenue and immediately facing the White House where the foundation of the Lafayette monument was originally laid, has been converted into a most artistically arranged mound of immense latanias interspersed with rhododendrons and fringed at the base with pandanus. A finer grouping of tropical plants, covering an area of nearly 1000 square feet, it would be difficult to find anywhere.

Fisher, on Pennsylvania avenue, has lately shown exceptional good taste in his window displays, by simple but effective arrangement of colors.

The Miller Brothers have opened a well stocked florist's establishment on Fourteenth street opposite All Souls church.

The large floral representation of the U. S. Capitol Building (which the Smalls after exhibiting here presented to the Elks of this city, and was fully described at the time in the AMERICAN FLORIST), I see, was awarded the first prize among the competitive "floats" taking part in the recent great conclave and turnout of the National Council of Elks at Louisville, Ky.

BROOKFIELD, Mo.—On the morning of May 20 a severe hail storm smashed about 1,000 lights of glass on the green-houses and hotbeds of Joseph Gamble. No insurance. It was the most severe hail storm known here for 20 years.

CHATTANOOGA, TENN.—Mr. A. Hallett, formerly of Pittsburgh, has leased property on Whiteside street, where he will conduct the business of florist and nurseryman.

The Flower of Luna.

The Yankton, South Dakota, *Herald* is responsible for the following remarkable account of a very remarkable plant. The ipomoeas must now take back seats as "moon flowers." It is said to think that the existence of this "Fleur de Lune" has often been doubted:

Mr. Arnold Brinkworth, who owns, perhaps, the finest private botanical collection in the country, and whose greenhouses near Mount Sterling, Ky., are filled with the rarest and most delicate plants of all nations, is exhibiting with much pride a specimen of the Fleur de Lune, the existence of which has often been doubted, but which was sent Mr. Brinkworth a few months ago by a friend residing near Obydos, Brazil.

It was obtained for him from an Indian, who found it growing in a swamp in the depths of the Amazonian forests, and is the only specimen which has ever reached this country alive. Those who have been favored by a glimpse of the curiosity say it is a delicate, tenacious vine, covered with small, glossy leaves of a bright and very tender green, climbing to a height of four or five feet, bearing here and there a milk white blossom of a disk-like shape.

When the moon is at its first quarter a distinct shadow or stain of a deep yellow, which seems rather in than out of the flower and corresponding to the shape of the moon, makes its appearance on this disk and grows as the planet does, until, when at its full size the yellow stain covers the entire flower. As the moon begins to wane again this retreats in the same ratio and finally disappears altogether, to return once more as the new moon is seen to come back.

When the planet sets the flower closes and does not unfold until the moon rises the following night. It pursues this course month after month whether placed in the open air or kept in a hot-house, though under the latter circumstance the yellow tint is much paler and more undecided, while the white surface takes on a dingy, unhealthy tinge. The plant subsists almost entirely on air, its roots being barely covered with a little moist gravel.

THE NEW YORK *Herald* of April 19 published quite a lengthy and very well illustrated article on the culture of palms in America. The writer speaks of palm culture as "coeval with the growth of a higher civilization, the broadening of a spirit of refinement, the emergence, as it were, from the chrysalis of rugged simplicity peculiar to this land of ours." This is very pretty language, and had it been applied to ornamental horticulture instead of to small division he would be forgiven. But the increasing call for palms is certainly indicative of an advance in taste that is pleasing to note, and this branch of the trade is assuming larger proportions every year.

THE Florists' Club of Philadelphia has one of the finest bowling alleys in the country. It is open all day in care of an attendant, and here any of the florists of America, when in Philadelphia, can pass a few pleasant hours in the popular exercise of bowling. The club has now 150 members in good standing. The club was organized October 5, 1885, and incorporated December 29, 1888.

ment until stock is exhausted.

J. C. GIBSON, WOODBURY, N. J.

Two Nursery Firms Swindled.

Martin's Ferry, May 3.—Leon Einstein, a Jew and formerly a clerk in a clothing store here, has swindled two nursery firms in great style. He sold nursery stock on commission, canvassing the entire neighborhood and was quite successful. He sent these orders to R. B. Niffin & Co., of Paterson, N. J., and received his commission. He then called on each of the persons to whom he had sold, told them he had lost the first order, and asked them to fill out a duplicate. This was done in nearly every case and the second order was sent to Ed. W. Reid, Bridgeport, who also paid Einstein his commission on each sale. Reid delivered the trees, rose bushes, etc. Later on the same quantity arrived from Niffin. It was shipped to Webber & Co., the livermen, with the understanding that they deliver it at a stated per cent. A part of the stock was delivered, and it was mostly refused for the reason the orders had been filled, and the stock is left in the hands of Webber & Co. Niffin & Co. want the swindler's address.—*Cleveland O. Plaindealer.*

"Crape Pulling."

A reporter for the New York Press has been out interviewing florists to ascertain the meaning of this term. Here is a portion of an interview with one florist:

"Each morning these 'crape pullers' pick up the papers and go through the death lists in a very careful manner. They select those people whom they know are in the middle walks of life. One of their men is then sent to the house of mourning and he, upon entering the room where the bereaved relatives are seated, inquires in his most sorrow stricken tones what was the cause of death. Naturally, some one will ask whether he knew the deceased. And the reply will generally be that they have had many and many a good time together. Such a jolly good fellow was Jack. And they were almost brothers. He used to come over to the store every day for his bunch of violets or a pink. Before the relatives are aware of the fact the artful fellow has a ten or twenty dollar order, which he fills with a design made almost entirely of dried flowers."

If such things as above described do exist, for the sake of common decency and the fair name of the trade, the ghouls should be exposed, and we would like to be one of a vigilance committee to treat each one to a coat of tar and feathers.

PRACTICAL TESTS.

UNIVERSITY OF CALIFORNIA.

AGRICULTURAL EXPERIMENT STATION,
BERKELEY, AUGUST 22, 1889.

MESSES. MORRIS, LITTLE & SON, BROOKLYN:

Gentlemen—In regard to the sample of Insecticide submitted by you for trial, I beg leave to state that the preparation has been used on the University grounds with the following results: First, four ounces of the insecticide were added to one gallon of water and applied to woolly aphids on apple trees with a spray pump. The insects were killed wherever touched by the wash, the result shows plainly that the material is effective wherever contact with the body of the insect can be secured. Second, one-half ounce of the insecticide was added to one gallon of water and application made by spray to the greenfly on rose bushes; the insects were killed on all sprigs reached by the spray. The amount of material submitted for experiment was too small to admit of large scale experiments, which would be desirable.

Very respectfully,

(Signed) E. J. WICKSON,
Assistant Superintendent Agricultural Grounds.

FISHING, L. I., June 25, 1889.

Dear Sirs—I have found your Little's "Antisept" very efficacious in destroying the insects injurious to plants, without affecting the plants in any way. I regard it as the best insecticide that I have used, and I would not be without it. It is easily applied, very effective, and can be used with safety.

Yours truly, JOHN HENDERSON CO.

409 FIFTH AVE., NEW YORK, JAN. 12, 1891.

Dear Sirs—We are most willing to testify to the good quality of "Little's Antisept." It is the best and most effective insecticide we have ever used. You can send us another 10 gallons. Yours truly,

SIBBERT & WADLEY.

QUEENS, N. Y., Jan. 8, 1891.

Dear Sirs—I have been using Little's "Antisept" since last September and have no hesitation in recommending it as by far the best insecticide I ever used. While it is sure death to all insects, there is no trace of the compound left on the foliage of plants. Please send us 5 gallons more at your earliest convenience. Respectfully,

JAMES MACKAY,
Foreman V. H. HALLOCK & SON.

PHILADELPHIA, PA., Dec. 3, 1890.

Dear Sirs—I have been using your "Antisept" for several months for water and soil, and find it valuable for that purpose.

Respectfully, JOHN BURTON.

1287 BROADWAY, BROOKLYN, N. Y.

Dear Sirs—I have used Little's Antisept for Manly Box and must say that it is the only remedy that I found to do the work effectively, having used various other insecticides before without result.

Respectfully yours, W. C. KRICK.

Floral Arrangements.

Two or three pretty breakfasts and lunches given within a few days furnished some suggestions for decorations. At one table laid for 24 people daffodils were the chosen blossoms, and were arranged with no green but their own spikes in glasses of different heights and sizes. A more elaborate arrangement of the same flowers was obtained at a smaller dinner by making a bank of moss in the middle of the table between the candleabra. Into this green heap fern fronds were thrust irregularly, and among the ferns were the long-stemmed yellow flowers. To fill up the sides of the table long sprays of daffodils and grass were knotted with yellow ribbons, the end sprays making posies. Yellow candle shades were used, and all the glass had a faint golden tint that helped out the effect wonderfully.

A rose table was one of the most beautiful seen in many seasons. For a ladies' lunch the cloth was laid with a pale green silk center cloth, about which were arranged old-fashioned decanter stands, in which were heaped large pink roses with reddish brown leaves. Less novel, but almost equally charming, was the rose table at which Mrs. Stanley sat down with a few friends the day before she sailed away over the stormy Atlantic with her explorer husband. The center cloth on this quiet little occasion was of pale mauve, and the roses were in small silver baskets tied with mauve ribbons. At afternoon receptions the newest and prettiest idea in floral decoration is to put a velvet cushion upon a table and to throw across this a long spray of orchids with delicate foliage. B.

Giant Banksia Roses.

One of the most remarkable and beautiful displays of climbing roses to be seen in California, is now in all its glory at Mills college. On either side of the front porch of the main building was planted, years ago, a small climbing rose bush, of the white Banksia variety. As year after year passed by, these bushes gradually crept up the sides of the porch, higher and higher, and then began to reach up the sides of the building, as if in friendly competition with each other. Each spring brought more and more blossoms, and each autumn saw the branches on a higher level. On they went, past the second story windows, then past the third, and still they were not satisfied. The fourth story window stands out from the cornice, and over the arch thus formed the two rival climbers flung their topmost twigs, and became mingled together in one. This year the arch of vines has become thickened, and now the whole mass is a perfect cascade of roses, scenting the air, and sending down a miniature snowstorm of petals whenever shaken by a breeze.—Oakland Cal. Enquirer.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL INSECTIGIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes—Half a Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half a pint of the Fir-Tree Oil to two or four gallons of water, or two or three table-spoonfuls to the pint.

For Red Spider and Caterpillar—Half a pint of the Fir-Tree Oil to two gallons of water, or three table-spoonfuls to the pint.

For Mealy Bug, Brown or White Scale—Half a Pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoonfuls to the pint.

For Mildew and Blight on Fruit or Foliage—Half a Pint of the Fir-Tree Oil to a gallon of water, or six table-spoonfuls to the pint.

Used with warm water it is quicker in its action than when cold is used.

Sold or rain water is necessary, and Applied in Wood, Tin or Pot Vessels.—(Galvanized Iron Vessels must not be used.)

FOR ANIMALS.—For Skin Diseases and Killing Grain mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ringworm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

Sold in Bottles and Tins.

CHICAGO, June 9.—Today a large body of prominent horticulturists representing the states of New York, Ohio, Iowa, Wisconsin, Michigan, Massachusetts, Pennsylvania and Illinois appeared before the committee of the World's Fair Directory and made a vigorous protest against the appointment of Walter S. Maxwell as Chief of the horticultural department. Mr. W. C. Barry, of Ellwanger & Barry, Rochester, N. Y., made the leading address.

YOU WILL benefit the FLORIST by mentioning it every time you write one of our advertisers.

The Nurserymen's Convention.

The American Association of Nurserymen convened in annual session at Minneapolis on the 3rd inst. The meeting was held in the Masonic Temple, only a few steps from the West Hotel, which was headquarters. Members who had not before visited the twin cities of the Northwest, expressed themselves as quite overcome by the signs of push and progress on every hand. The West Hotel is a stately pile fitted with every modern convenience and elegantly decorated. In fact it equals the best hotels in the largest cities. The Masonic Temple, where the meetings were held is also a notably handsome and well appointed building, and these were only samples of what was to be seen on every street in the business centre.

President S. M. Emery, of Lake City, Minn., called the meeting to order for the morning session of the first day, promptly on time, about 250 being in attendance. He then introduced Hon. P. B. Winston, mayor of Minneapolis, who in a few words of welcome extended the hospitality of the city to the association. He recognized the importance of the work of the association and hoped that the session would prove so pleasant and profitable that it would again see fit to visit the Northwest on the occasion of a future annual session.

President Wyman Elliott, of the Minnesota State Horticultural Society made a few supplementary welcoming remarks. Governor Merriam was unable to be present.

Present Emery responded on behalf of the association. He laughingly said that while it took men of considerable calibre to be mayors and governors, the requirements were insignificant compared with those which must be possessed by a successful nurseryman. After thanking the previous speakers for their warm words of welcome he proceeded to read the president's annual address which was both practical and humorous by turns.

After mentioning his first connection with the association, at St. Louis, in 1883, and the increase in its membership from 100 at that time to 400 in 1891, he emphasized the value of organization in any attempt to secure recognition from the authorities. He felt that while the association had accomplished much, still more was to be done. He believed that there were some who wrongly considered the conventions as times only for barter and sale. He discountenanced this view and urged that the time be spent rather in ascertaining how to produce first class goods and the best manner of disposing of them. He called attention to the magnitude of the work for the nurserymen to do. Six millions of homes to beautify, to fructify, and to render tenable as earthly abodes. To shield from the burning rays of the sun, to shelter from

the winter's blasts; to supply this vast congregation with fruits, the best of their kind and in due season. Aside from heat, drought and insect pests to be guarded against, the nurseryman must cultivate that rare plant, human confidence, before his labors can be rewarded. "Thornless gooseberries," "blue roses," "seedless apples," have all given the confiding an opportunity to cut their eye teeth. He said:

"We have to congratulate ourselves upon the improved tone of the nursery business. Nursery stock is worth 25 to 40 per cent. more than a year ago. But this is no argument in favor of indiscriminate planting of cheap varieties. The habit of speculation is unsafe and operates against the grower. In my experience I have never known extended and complete financial loss to befall that nurseryman who grew and sold his own stock."

"Among improvements to be desired is the official adoption of a general telegraphic code, by which orders may be abbreviated."

"The committee on freight and express might consider a plan for the introduction of the C. O. D. method of selling plants." The official incorporation of this association ought to be accomplished and the constitution and by-laws revised by a committee to report at this year's meeting. Notice should be taken of the matter of charges for insurance, and a committee should be appointed to confer with the boards of underwriters to secure reduced rates and a standard style of cellar and parking. It might be well to consider the organization of a mutual insurance company among the nurserymen."

He concluded by calling attention to the near approach of the time set for the opening of the World's Fair, and the apparent intention of California to control the horticultural department regardless of the means employed. He alluded to the classification adopted for the department as pathetic in its ludicrousness and declared a vigorous protest against such folly, in order.

The report of secretary Chas. A. Green, showed receipts during the year of \$1,753.71, and disbursements of \$1,273.79. Including the previous balance on hand there is now about \$1,000 in the treasury.

The remainder of the morning session was devoted to a discussion on peach growing in which a number participated, a gentleman from Georgia telling some pretty tall stories about peach growing in his state. A special committee was appointed to consider the matters touched upon in the president's address.

At the afternoon session Mr. J. H. Hale, South Glastonbury, Conn., superintendent of the horticultural department of the eleventh census, talked upon the remarkable growth of the nursery industry

ness as shown by the reports he had received, but which were not yet fully compiled and ready for publication. He spoke of the difficulty encountered in securing accurate information and of obtaining responses to the queries made, and raised a laugh by announcing that among the culprits who had not yet responded were the president and secretary of this association.

Then followed an essay on "One good way to sell nursery stock," by G. L. Grant, Chicago, which is printed elsewhere in this issue, and a talk on "Horticulture in Minnesota," by Prof. S. T. Green, of the State University. He touched upon the availability of the Russian apples for the Northwest, and a very vigorous discussion of the subject ensued. The preponderance of opinion was to the effect that the Duchess of Oldenburg and the Hiberna were the only ones that gave indications of being useful and it was considered the part of wisdom to try the Russians sparingly.

The session opened Thursday morning with an essay by C. S. Harrison, Franklin, Neb., upon Rocky Mountain evergreens. He urged the use of the pines of the Rockies as the only evergreens that would stand the trying climatic conditions of the western plains and make possible a solution of the problem of clothing them with forests, resulting in conditions favorable to the growth of fruit trees.

Mr. W. C. Barry, Rochester, N. Y., gave a short talk upon the work of the American Pomological Society, and urged the young men present to join and assist the society in its work. He announced that the next session of the society would be held in Washington, Sept. 22 to 25 of the present year.

"The northwest as a field for nursery extension work" was the subject of a paper by Chas. A. Keffler, Brookings, S. D. He said:

"I believe the trade will find a profitable field in the prairie regions of the northwest, for means of modifying existing unfavorable climatic conditions must be devised. It is futile to hope for an extensive demand for fruit trees on the prairie, until universal grove planting has been practiced. The winds must be conquered before orchard fruits can be grown in but the smallest way on the prairies. And as the forest tree, owing to the more sturdy organization nature has given it, can thrive in untoward conditions more successfully than the fruit trees, in which ability to withstand adverse climatic knocks has been greatly reduced by high cultivation, the wind break must be the precursor of the orchard. Western farmers recognize this condition of affairs and groveplanting was made the pioneer work in horticulture. The western farmer will grow his own fruit as soon as he has provided a sheltered location for an orchard. Let him conquer the dry south winds, prolific cause of disease in fruit trees, and he will be your best patron."

J. S. Harris, of La Crescent, Minn., spoke upon "the outlook of pomology in the northwest." He related the many unsuccessful attempts to grow there the varieties of fruit trees so useful in the east, and as the final result of these failures the attempt to raise at home seedlings suited to the peculiar climatic conditions of this section and the encouraging progress that had been made in this direction.

The secretary of the Minnesota State Forestry Association introduced a resolution urging upon President Harrison the

exercise of certain of his prerogatives looking to the preservation from fires and vandalism of the remaining forests of Minnesota. It was unanimously adopted.

No session was held during the afternoon, the convention in a body having accepted an invitation from the Mayor, Common Council and Park Commissioners of Minneapolis to take a drive through the Park system that encompasses the city. This proved a most enjoyable and instructive feature of the meeting. The country about Minneapolis is naturally picturesque, and under the direction of Mr. H. W. S. Cleveland, the veteran landscape architect, these wonderful natural advantages have been developed to a high degree. The visitors from the eastern cities were amazed to behold so finished a creation in so young a city as Minneapolis.

The evening was devoted to the enjoyment of an entertainment provided by the Minneapolis hosts, under the direction of Mr. Wyman Elliott, President of the State Horticultural Society.

Mr. Albaugh's much anticipated "pome" had been reserved for this occasion, and it called forth rounds of applause. He related in rhyme the trials and troubles of the nurserymen during the packing season, and the many trade hits and comicalities were much enjoyed.

Mr. H. W. S. Cleveland gave a short description of the work that had been done in the construction of the park system of the city and plans for future operations in the same direction, making the same plain by the use of a large map, and pointing out on it the route travelled by the convention on the afternoon ride. He was received with long continued applause, which was resumed at the conclusion of his remarks.

Mr. J. Jenkins, of Winona, O., presented a bouquet of good old humorous stories about the trials of the tree agent. His "piece de resistance" was the story about the agent who was frozen to death in a blizzard, and when the body was found after the spring thaw the check was still unaffected.

Mr. Geo. S. Josselyn, of Fredonia, N. Y., read a very humorous paper and suggested that the association go into the show business. He thought that several of the members could make their reputations as doorknopers if properly harnessed to a bell punch.

Mr. C. L. Watrous, of Iowa, spoke upon the pioneer nurseryman. In the course of his remarks he related what had been done in his section toward the raising of varieties suited to the locality, by fertilizing flowers of the native crab with pollen from the finer apples. He minutely described the plan followed and urged others to undertake this method of securing varieties of their own suited to their own climatic conditions.

The essays and speeches were interspersed with songs by a very excellent quartette, which was encored after each number. It was a thoroughly enjoyable evening and was a very excellent combination of the entertaining and instructive.

At Friday's session papers were read on "Growing evergreens for protection on the western prairies," by E. H. Ricker, Elgin, Ill.; "Transplanting and pruning evergreens," by Chas. F. Gardner, Osage, Iowa; "Propagation of the apple for western and northern orchards," by J. V. Cotta, Nursery, Ill.; "What the government is doing for pomology," was the subject of an essay by Hon. H. E. Vandeman, Washington, which in the absence of the essayist was read to the convention by a delegate.

Officers for the ensuing year were elected

as follows: President, J. Van Lindley, Pomona, N. C.; Vice-President, W. J. Peters, Troy, O.; Secretary, Chas. A. Green, Rochester, N. Y.; Treasurer, A. R. Whitney, Franklin Grove, Ill.; Executive Committee, W. C. Barry, W. J. Heikes, G. J. Carpenter.

Atlanta, Ga., was selected as the place for the next annual session.

The committee on the president's address reported as follows:

Your committee, having carefully considered the recommendations contained in the very able address submitted by the president, beg leave to report as follows:

Resolved, That a committee of three be appointed by the chair to consider the recommendations relative to insurance of nursery stock in the field and in cellar and report their findings at our next annual meeting. We would also recommend the appointment of a like committee to consider and report at the same meeting a telegraphic code to be used by the association if found advisable.

Regarding the very important subject of the World's Columbian Exposition and the recommendations for protest thereon, we beg leave to submit the following:

Whereas, we believe the classification adopted for the World's Columbian Exposition relative to horticultural subjects is faulty and unjust to the horticulturists of the country and if allowed to stand will tend to hinder the success of that department, therefore

Resolved, That we, the American Nurserymen's Association, representing every state in the union, do most earnestly protest against such classification and ask that the same be changed to conform with the acknowledged, reasonable classification accepted by the horticulturists of the world without fixing the various classes under which exhibits might be made. We suggest the following grouping as satisfactory to the nurserymen, fruit growers and florists of this association:

Department B. Horticulture.

Group I. Pomology, including all fruits on exhibition.

Group 2. Floriculture, including flowers, flowering plants, shrubs, cut flowers, etc.

Group 3. Arboriculture, nurseries and their products.

Group 4. Kitchen and market gardening and their products.

Group V. Horticulture, appliances, methods and tools.

Group VI. Seeds used by nurserymen, florists and gardeners.

Resolved, That we most earnestly protest against the appointment of Walter S. Maxwell, of California, as chief of the division of horticulture of the World's Columbian Exposition. We believe as we do that there should be a man at the head of the great work who by taste, knowledge, experience and sympathy with every horticultural interest of this great country.

The report was concurred in and a committee of four was appointed to present the matter to the exposition directors. This committee is: W. C. Barry, of Rochester, N. Y.; N. H. Albaugh, of Ohio; C. L. Watrous, of Iowa, and Charles W. Garfield, of Michigan.

NOTES.

The foreign nursery interests were represented by Messrs. Fell and Palmer, of England.

The query "what shall we do with the surplus?" was answered: "Send it to Washington."

The Nurserymen's Protective Association held several sessions, but of course with closed doors.

Among the delegates from the east was Mr. H. B. Bentley, of Old City, Pa., secretary of the Florists' Protective Association.

The trade exhibition was not as large as usual. The principal feature was a collection of evergreen seedlings by D. Hill, Dundee, Ill.

In filling out the census blanks one nurseryman replied to the query "How many women do you employ, and what wages do they receive?" with "Two; no wages—wife and mother-in-law."

Some of the members of the association are in favor of forming a mutual insurance company, to insure stock against damage by hail, on a plan similar to that of the Florists' Hail Association.

VASE OF CATHERINE MERMET ROSES

Referring to the Minnesota state law regarding the sale of nursery stock in its limits by nurserymen from other states, President Emery said that at the meeting at Chicago after the passage of the law he barely escaped hanging at the hands of the other nurserymen, and he owed his escape solely to the fact that the lamp posts were not high enough to properly suspend his anatomy.

Mr. James D. Reynolds, of Riverside,

Ill., who has been endorsed by the association for the position of Chief of the Horticultural Department of the World's Fair, was present. He had with him a large plan of the exposition grounds and he gave the convention a half hour's talk, pointing out on the map the location of the horticultural building and the space that would probably be devoted to nursery products.

President Emery completely fitted one's

conception of an ideal presiding officer. Quiet, collected, never rattled, always equal to the occasion and preserving perfect order without overstraining the application of parliamentary procedure; and ready with a quiet bit of humor here and there to relieve a strained situation. There was a general feeling of regret among the members that he did not see his way to accepting a nomination for a second term.

Massachusetts Horticultural Society.

RHODODENDRON SHOW.

The annual Rhododendron Show which was held at Horticultural Hall, Boston, on Saturday, June 6, was somewhat of a surprise in the unusual extent of the exhibition and in the number of visitors who attended. To-day that the show was a great success is putting it very mildly. Such a throng of people have rarely been seen at any exhibition of flowers here, and the display was in every respect worthy of the attention it received.

The rhododendrons were of course the central point of interest. Of these there were a number of exhibits, but, as in former years, the contributions of H. H. Hunnewell and F. B. Hayes far exceeded all others in quantity. Mr. Hunnewell's collection of cut blooms consisted of over one hundred named varieties, and filled the whole front of the stage. The exhibit of F. B. Hayes filled a large table running the entire length of the hall, and was splendidly staged with large masses of blooming shrubbery for a background.

The first premium for a single truss of any tender variety was awarded to Jos. Clark for Sappho.

First prize for twelve hardy varieties was won by John L. Gardner. The varieties shown were Sherwoodianum, Alburn elegans, Everestiana, Lady Clemonet, Caracatus, Queen Delicatisima, H. W. Sargent, Lady Emily Cathcart, Mrs. John Clutton, James McIntosh, and azurcum.

Second prize went to F. B. Hayes for Generic, Stella, Caracatus, Delicatisima, Everestianum, Alburn elegans, Lady Armstrong, roscum elegans, H. H. Hunnewell, Mrs. John Clutton, Maculatum grandifolium, and Maculatum superbum.

The hardy azaleas were only fairly represented, and the tree peonies were conspicuous by their absence.

In assorted hardy flowering shrubs the display was magnificent. The principal collections came from Jackson Dawson, N. T. Kidder, F. B. Hayes, and J. S. Fay.

Herbaceous plants were also seen in grand profusion, the principal exhibitors being N. T. Kidder, J. W. Manning, and Temple & Beard.

E. H. Hitchens, Mrs. P. D. Richards, and W. E. Coburn took first, second, and third prizes respectively for wild flowers, each of them showing a large number of rare species. It was gratifying to note that all the displays of herbaceous, shrubby, and wild flowers were carefully labeled, in some cases both the botanical and common name being given.

The collections of pyrethrums showed a great advance over previous exhibits. Those staged by Temple & Beard were remarkably rich in variety and brilliancy of color. Dr. C. G. Weld, J. L. Gardner, and Mrs. E. M. Gill all showed good collections of pyrethrums.

Among the other attractions in cut flowers were fine roses from Joseph Clement, gloxinias from J. H. White, aquilegias from John L. Gardner, pansies from J. S. Fay, J. E. Coburn, and M. B. Faxon, clematis from J. H. Woodford, carnations from C. Southworth, novelties in peonies, irises, and anthuriums from Pitcher & Manda, and baskets of flowers from Mrs. A. D. Wood and Mrs. E. M. Gill.

David Allan showed a group of beautiful new varieties of *Odontoglossum vexillarium*. One of the finest is that named *Harrisianum* in honor of Mr. F. L. Harris, of Wellesley. The flower of this

variety is four inches across, of the most vivid carmine, a remarkably brilliant color. It was awarded a silver medal.

The variety named *Allanianum*, after its exhibitor, is another flower of rare beauty. The sepals and petals are of a rosy peach, with pure white tips. This plant received a first class certificate of merit.

A first class certificate of merit was also awarded to Pitcher & Manda for *Cypripedium Brownii*, a beautiful hybrid between *magniflorum* and *leucorhodium*.

A group of *encleolarias* from N. T. Kidder, William Martin, gardener, attracted much attention on account of their abundant bloom and dwarf shapely appearance.

Only one thing about the show requires criticism. It is the manner in which the public was admitted to the hall before the hours announced for opening, whereby the exhibitors were hindered in their work of staging their flowers and the judges found it impossible to examine the exhibits and make the awards with that care which is so essential to correct judging. This evil has been on the increase for some time, and measures to correct it cannot be too quickly adopted. W. J. S.

The Drawing Room Exhibits at the New York Show.

I can hardly believe Mr. Thorpe to be so inconsistent to his previous declarations when he tries to assure us in the face of glaring facts, that it gave him great pleasure to discuss the judgments passed upon these particular exhibits. In doing so Mr. Thorpe was evidently oblivious to the fact that he was in the position of a man in a glass-house where people could throw heavy stones at him.

We will allow that in the greenhouse very few would like to dicker with Mr. Thorpe, but when he passes opinions on matters relative to the retailer's branch of the trade he must expect to meet those who will dare to question his judgments.

Let me ask Mr. Thorpe, or any retailer in New York, if he and they considered any of the judges of those exhibits competent? This is where all the trouble springs from and is the most important point to consider. Who were those judges? Would any retailer in New York select them for judges? Is it not a fact that not a retailer acted on the committee of arrangements? Were not the lady judges prejudiced against and entirely opposed to what they considered extravagant and immoral decorations? I can prove to Mr. Thorpe that those judges never had any experience in such matters and were opposed to such extravagance. It is simply absurd for Mr. Thorpe or any one else to try and white-wash with botanical paint the wretchedness of such judgments.

Let us look at the rooms, which were admirably illustrated in a recent issue of the *FLORIST*. I am satisfied that anyone who knows anything of decorating can only have one opinion after looking at those illustrations. It was claimed that Stumpff had the best room. Why? The rooms are of equal dimensions, the only difference being the mantel which Stumpff would have had put in if it had not been there. That mantel was not intended for people to admire themselves in, it was simply used as an ornament. There is a space of something like three feet between the top of the mantel and the ceiling; in this space was placed a group of *Dracena terminalis*, which Mr. Thorpe says was too crowded. The azalea in the centre of the room was

used as a divan ornament; underneath it were placed a few seats. The azalea was immediately under the lights and was not out of place. There was ample space left everywhere for pictures and such bric-a-brac as usually adorns the average drawing room. There was plenty of room left for four persons to pass on all sides, notwithstanding that the room was only 20x18. There were but two colors in the flowers used, namely pink and yellow, except the pansy above, which was yellow and purple. Do not *Acania pubescens* and *Madam Cusin* roses go together in room decoration? Where were the glaring faults in contrast? Has Mr. Thorpe ever seen a Fifth avenue drawing room decorated? Surely no one would allow their drawing room to be designed and their furniture destroyed by nailing on to it such coarse stuff as common palmetto leaves (Mr. Thorpe calls them *chamærops*) which formed the greater portion of Mr. Warendorff's decoration. As shown by the illustration these leaves were actually nailed on to a mirror.

There was less room for furniture and but little walking room in Mr. Warendorff's room; then again, has anyone ever seen a mound of *Lilium Harrisii* in the centre of any fine drawing room? Or has anyone ever seen a gas fixture completely hidden by wild smilax? Suppose the gas was lit? I doubt if there is a reputable florist in New York who will agree with the judges or Mr. Thorpe in this affair. JAMES DAVIS.

The Arrangement of Flowers.

The able articles on decorations, arrangement of flowers regarding their colors, and kindred subjects appearing recently in these columns, should be very welcome reading to the florist who has not as yet learned it all, and if the average flower man was not such an each-hour-busy person, much valuable discussion should follow, such as would set us thinking to a better purpose and towards higher aims in a noble calling.

Are we not given to working towards "high art" as a standard in decorations, beyond what can practically be accomplished? We ought not in this short life to allow any useless waste of our energies. Mr. Bentley's paper abounds in well taken points. In speaking of the drawing rooms he sensibly suggests: "remember what we are here for—to decorate," and the florist's decorating, instead of a high art arrangement accomplished at leisure with materials selected at discretion, is to be a defined result that can be practically accomplished by practical work done on the moment, so to speak, with perishable materials which are often uncertain of command. Here the experience and skill of the decorator play their parts, first in getting together his materials at the needed time in proper condition, exercising ability to measure ahead the extent of prospective work, and how it can best be accomplished at the time, by the most economical means as far as possible, and have this finished work a display, showing the exercise of good taste all through, nothing inharmonious or "quarreling" to borrow Mr. Mathew's term. Is it surprising that some of the "high art," a vague article at best, be often somewhat sacrificed? Good taste combined with practical work goes the farthest.

Consistency, I believe, if followed out well, will help us much. Mr. Bentley's idea of the disposal of palms and other plants, in bold arrangements in the halls

BOWL OF MADAME DE WATTEVILLE ROSES

and large parts of a house is sensible and consistent. The adverse features of those drawing rooms at the recent New York show, to my mind, lay in the apparent transformation of a parlor into a plant conservatory, whereas a decorated parlor was called for. Too much of the floor space was intruded on by plants to the exclusion of lighter and airy decorating, suited to the surroundings. This feature was most noticeable in Warendorf's work. Inconsistency reigned supreme. As an alcove, or side room, to be looked on as scenery only, or a roaming spot, the effects would have been ideal, barring probably the high cost.

If we must use handle baskets for flowers, let them be when finished baskets pure and simple. I refer to the somewhat common style of loading up and down of basket handles with a mass of bloom, oftentimes of heavy character and so generous as almost to divide the flowers between the basket and its handle. The uninformed might easily look on it as being a base of bloom and an arch of flowers rising from it, or be puzzled to tell where the basket stops or the handle begins. A light graceful arrangement of bloom and foliage on the handle is decorative, loading it heavy,

conglomerates the whole and detracts from a graceful and consistent effect.

Ribbons employed moderately I think desirable, as their use helps to produce the required effects without detracting from the beauty of the flowers. But an excessive use of them should be guarded against.

Above all else, simplicity in arranging flowers and naturalness in using them, should always be worked for. Yeoman service can be done here in discouraging complicated arrangements. But when they are ordered, treat them simply, making up the separate parts of as few kinds of flowers as possible. The stiff covering of forms by surface measure with flowers of indifferent or poor quality and texture and encouraging intricate shapes and indiscriminate use of manufactured lettering is a poor recommendation for flowers as they should and could be used, and I believe a harm to the trade at large.

L. B. D.

Packing and Shipping Cut Flowers

Will some experienced shipper of cut flowers tell us the best way to pack and ship, giving methods employed in summer and in winter? S.

Roses in Vases and Bowls.

In this issue we present beautiful engravings of a vase of Mermets and a bowl of Wattevilles. The arrangement of the roses we consider most excellent, and worthy of careful study by all who would excel in this department of the decorator's art. The arrangement is the work of Mr. H. H. Battles.

Returns From Auction Sales.

ED. AM. FLORIST:—What is the rule at auction sales? My reason for asking is this: We sent some plants to an auction a few weeks ago, and have not yet received a statement as to how the plants sold, prices, etc. It seems to me that a detailed account of the sales should go out at the latest two days after the sale, so that the poor florist can form an idea as to how much he has realized from his consignment. P. D. Q.

WILL SOME of your numerous readers please inform me what is the "Lethorian Vapor cone"? E. D.

WILL some reader of the FLORIST give the best plan for building a refrigerator for cut flowers? S.

How shall we grow Chrysanthemums?

ED. AM. FLORIST: Your correspondent from Toronto in your issue of May 28, makes a request that I have made many times to different parties, and as yet, have never been satisfied with the replies received; and I would like to join him in making the request of some of the "big guns" to tell us little ones how to grow the chrysanthemum, to be in the swim, or bang up in style. Should it be for size of plant, size of flower, the number of flowers, or a combination of all? Can it be grown in the combination style and give satisfaction? Information on the above points from the authorities, would save any amount of worry to the small growers.

With my experience I would say that it is hardly any trick at all to grow lots of flowers on an ungainly looking large bush. All that is necessary is to get a rank growing kind, give it lots of feed and plenty of drink and room, and you will get your big plant with lots of poor flowers. But, is that the aim, or should that be the aim of florists? Would it not be in better keeping with this progressive age to grow for quality instead of quantity? Is not a neat, tidy, well trimmed and reasonable sized plant with a few good flowers preferable to the former? With your correspondent, I do not believe in doing so and so, because it was done so in some other country or a century ago, neither do I believe in going back, or keeping in the wild state for fear that we may be imitating some one else. Improvement is what we want.

The present rules or rather want of rules, for growing chrysanthemums, makes some of us feel as though we were groping in the dark, not knowing which way or how to turn, and seeking for light that we cannot find. I should vote in opposition to your correspondent, as I should be in favor of single stem from the ground, and well grown bush, and good flowers, against all unwieldy large plants or the more than useless standards. In all cases "quality before quantity." Will not some of the "big guns" tell us what to do to be saved. B.

The Casket Cross.

The cross as shown in the illustration was made for the funeral of an elderly person, and was composed of ivy leaves, a cluster of wheat lashed on by a band of purple pansies. These crosses we often make five and six feet long. They are generally placed on the casket on the way to the cemetery, and on the mound after the burial, which partly conceals the soil. This design, like all others, is capable of many combinations. This combination we particularly like for age. For a child we should use white and for a young lady we often use delicate pink in our work.

Speaking of covering the soil, it occurs to me that I have never seen in print anything about lining graves; not a pleasant subject, but possibly it will be well to

speak of it. It surely is a good idea to encourage, and I often wonder that it is not done more than it is. We shall have graves until the people get educated up to the idea of cremation. And graves are very ugly sights and leave such a lasting impression that it would be far better if some of the money that is spent for unsightly designs, could be used to hide the newly turned soil, and take some horror from burial.

When we have it to do, we use two boards eight feet long, nine inches wide, and two four feet long, nine inches wide. These we place around the edge of the grave, and on the edge of the boards we put tacks about five inches apart, and from these tacks we hang smilax. Always be sure that the box that the coffin is to be placed in is in the grave before you commence work or you will be obliged to do it all over again. Now, the boards on top are to be concealed, which we do with smilax, fern, asparagus or palm leaves, and after we have a good bed of green we throw flowers carelessly on top, violets and lily of the valley we have used with very good effect, but any flowers are pretty so long as the variety is not too great. We have also fastened a few flowers on the smilax that hangs down, although we should not advise using too many for that purpose. Now the mound of earth should be covered, which can easily be done with laurel or cedar boughs. A vastly different impression will be left on the minds of the unhappy friends. Often some of the friends wish to remain until the grave is filled in with earth; when this is the case, lift the boards that the smilax is fastened to, drawing it to one side, and when the mound is formed, draw it back, thus covering the whole mound with green. H. H. BATTLES.

Easter Plants and Flowers.

BY THOMAS CARLEIDGE.

[Read before the Florists' Club of Philadelphia at the June Meeting.]

The Easter of the present may truly be called a festival of flowers, and deservedly so, for at no other season are they more appropriate, representing as Easter does the glorious consummation of the Savior's life work for humanity, his resurrection and ascension. Occurring each year in the early spring, from middle of March to latter part of April, it always has been a joyous season in every christian community and church, and what can be more appropriate or beautiful for decoration than plants and flowers, nature's own handiwork? In offering to prepare this paper I thought I had it all in my mind, that I knew it all, but find that it requires more time and attention to get at statistics and particulars than I can give in the brief space allotted for its preparation, and shall only offer my opinion of the most useful and salable of the many plants offered at this special season, the quantity grown and sold by a few of our wholesalers, and what have been sold at retail that came under my own special observation.

Twenty-seven years ago, for then my Easter experience commences, we had no Easter trade worth speaking of. A few very ordinary flowers made up in one sided bouquets, a calla in the top and all made as nearly alike as possible for the Catholic churches, a few calla plants, the only Easter lily we then had, was almost the extent of our Easter trade. But I have seen it growing steadily for that time to its present dimensions, the best season of all for the florist, whether whole-

salor or retailer, with its demand for almost every form of plant and flower that comes in or can be made to bloom at this season of the year.

Let us take up the plants and flowers most used in our Easter decorations in the order as they seem to be of most importance.

First the lily, the longiflorum or Harrisii, now most generally known as the Easter lily, the typical Easter flower of the present. I do not think it was used or recognized as such in olden times, as I have never seen it represented in the old pictures of Spanish and Mexican artists in connection with their saints, a subject they were very prone to illustrate, but universally the candidum, which I still think is the true Easter lily of old time traditions. That this is an age of improvement in floriculture is surely evident in the prominence given to the longiflorum and Harrisii, as it is so much superior in every way to the candidum as a church or house decorative plant. Old time tradition must give way to the practical with florists, as with other business, however much we may deplore the substitution of it for sentimental legends of the past.

In referring to the few statistics that I have been able to gather up for four or five of our largest growers, I find that they raised and sold from 6,000 to 7,000 plants that I judge would average 75 cents per plant at least, they being sold at from ten to fifteen cents for each flower and bud. Cut flowers nearly as many. Our own sales at retail being about 750 plants and 1,000 cut flowers for the week ending with Easter eve. I notice that one prominent Bermuda grower promises to have for market this year, at least half a million bulbs, and that one grower wants at least 20,000 for his own use. We had them this past Easter in almost all shapes, some with very tall, weak stems but good flowers, some quite short with flowers not so large, but of good substance, and some splendidly grown ones with from 5 to 15 flowers on a plant, and they all sold equally well. There seemed to be customers for all kinds. Plants were better grown and in better condition this year than usual, or we received them in better condition, which I think is owing in a great measure to having them delivered earlier, before too much out. And this to the grower: Try to deliver them before they are too fully expanded or carefully wrap each flower in soft paper. It saves loss of flowers and cash to the grower, and better still, loss of temper to the retailer. I suppose there was at least as many sold by the multitude of small growers as I have enumerated above.

Mr. James Dean of Bay Ridge, in his able paper read before the Society of American Florists last year in Boston, places the azalea second on the list, and for New York he is probably correct, but I think for our city we must concede the hydrangea second place, at least that is my opinion in referring to purchases and sales; although it may be owing to the scarcity of good azaleas, the supply for Philadelphia being limited, I think our growers were all sold out.

The hydrangea as a decorative plant has few equals, especially the Thomas Hogg variety, when white flowers are wanted for church work and decorations. The one great objection to them is that it is almost impossible to keep them watered enough; they will wilt down if they get the least dry. Give them plenty of water and not too much air, and there is nothing better for lasting.

CASKET CROSS.

Let them be grown slower, give more time to harden off in a cooler house, if season and time will permit, and I think we will have fewer complaints, more color in the flowers of the pink varieties, and better plants generally.

All the varieties that are commonly grown: Thomas Hogg, Otaksa, Hortensia, Rosa, seem to be about even in the race. The red stemmed variety, said to be new, was in beautiful form and color on a few plants I saw at Mr. W. K. Harris', and seemed very desirable, but does not force as well as the others. The sales of our larger growers were about 2,000 plants—250, I suppose, would

cover our retail sales; very few were sold as cut flowers, although a large number of the white ones were cut up and used in white work. The plants could be bought at prices that paid well to cut, in the scarcity and high prices of carnations, etc., for Easter.

The azalea is one of the best of our Easter plants, as far as beauty and durability are concerned. A splendid window plant, very durable and giving the best satisfaction if only fairly well taken care of. Give it plenty of water and it will stand both a hot and cold atmosphere. I do not specially care for the symmetrical trimming our German friends give them

but rather prefer the old bushy style, but the former seems to be the fashion and they sell. Their high price rather keeps them back, but they are getting cheaper and better each year, bringing them within reach of a larger circle of plant lovers. I am not well enough acquainted with the varieties to speak of many of them, but place Madam Vander Krusen first; have sold more of it than any other five varieties. It has more good qualities than any other azalea I know. Deutsche Perle, Bernard Andre alba, and the old Indica alba, are all good whites, Deutsche Perle especially for early. The new double Vervaeuana is a very pleasing color and fine flower; and I hope it may fulfill the great expectations entertained of it. Azalea sales: Growers 2000; our retail 200 plants, large and small.

The *gnosta* or *eytissus*, indispensable in our yellow decorations, is a most useful plant, not so showy or graceful as *Acacia pubescens*, but fills its place, for acacias are not to be had. Our growers report sales of about 500 plants; our sales about 125 plants, large and small.

Astilbe japonica or *spirea*, another most useful Easter plant, remains long in bloom under all circumstances if well watered, reasonable in price, within reach of all, and was very generally used throughout our city this Easter. I think not less than 6000 were sold by our growers. Have no idea how many were used, as the plants were cheap enough to cut up for flowers and green.

Deutzia gracilis is indispensable for florists' Easter work, as there is nothing prettier or more graceful in cut flower work, and if not sold as a plant, can always be cut up to advantage. There was a large quantity around the past Easter and plants sold well.

Lily of the valley, well grown, about ten roots in a 4 or 5-inch pot, always sells well and commands a good price. Should not be allowed to get too far advanced in flower and should be well hardened off in a cool house: one of the Easter plants that can always be used as a cut flower if not sold as a plant. We have used it largely for filling fern pots and in-door window boxes, especially for Easter holidays. The sales of plants and cut flowers must have been large, but did not get any statistics; our sales of cut flowers and plants for the week ran up into the thousands.

Rose plants were scarce, especially hybrids. From what I saw in my visits to the different florists, the imported budded varieties did not do well this season. They either came in bad condition or were taken up at the other side of the water without being properly ripened; when well grown they make the best rose plants for Easter, giving good foliage and fine flowers. Magna Charta, Mme. G. Luizet, Baroness Rothschild, Merveille de Lyon, and Jacqueminot, being favorites among the hybrids; La France, Hermosa, Duchess of Albany, and Madam Plantier apparently doing best in other classes. The new polyantha rose, Clotilde Souper, is in my opinion one of the coming roses for an Easter plant. Well grown roses always sell well at Easter, only they must be sold quickly as they do not last well after being subjected to severe forcing.

Rhododendrons, if well handled by our growers, would be a live competitor with the azalea, especially if we could import them in good condition and at reasonable prices. Their beautiful colors and clean, bright foliage make them very attractive, and we have found that they sell well if in good condition, and an elegant plant in a decoration.

Hyacinths were in very good condition and quantity and they sold well, being used in many decorations in churches and for window boxes, and many other places where a low plant in full flower was required; and a great many were used as window plants in private houses. Our principal growers report sales of about 3,000, which I think may be less than one-half the quantity sold in Philadelphia this last Easter.

The common *Marguerite*, or *Paris daisy*, also came in prime condition, and sold well. I am sure it gave good satisfaction to all parties, as all of our growers who had them in full flower sold out, so far as I know, at satisfactory prices. A very useful plant, not only for Easter, but for general winter use where a showy white flower is needed, does well in the house, and thrives with but little care.

Callas, still favorites with some of our old-fashioned people, I do not think sold as well this season. For the first time in my recollection the supply exceeded the demand, with us, both in plants and cut flowers.

The early flowering *myosotis*, or forget-me-not, was very scarce this year, and it is a plant that always sells well, especially when grown in such splendid five-inch pot specimens as our fellow member Harris had it a few years ago. I trust some of our enterprising florists will try it and do it well for next Easter, as it is much inquired after at that time.

Large quantities of pansies, geraniums, and other small plants in good condition, always will sell, but the expense of delivery to some of us is a drawback to attempting to handle them in quantity. We must send them home for many of our customers, and it costs more to deliver them at long distances, as we often have to do, than the price of the plants; a fine azalea, or hydrangea, on which there is a good profit, can be delivered at the same expense.

More palms were sold this Easter than ever before in my experience. *Areca lutescens*, *kentias*, *latanias*, and *pandanus*, not the very large, expensive ones, but plants running from \$2.50 to \$10, and they always do so well in the house if only given half a chance that it is a real pleasure to sell them; very few complaints about them, and, besides, there is generally a liberal profit for the retailer, or we can keep them for our decorations for another year without loss, and they grow into money for the grower who has a greenhouse and will take care of them.

Before closing with the plants, I must add a good word for the double daffodil, especially as we had it at this Easter so well grown, both in foliage and flower, its beautiful bright yellow, a fashionable color, made it a deserved favorite, both as a cut flower and plant. May our growers keep it up to this year's standard or better. Plants the last year or two have taken a decided lead in our Easter sales, not that cut flowers have fallen off, but they have not advanced anywhere in proportion to our plant sales, one of our largest growers reporting his sales of plants at about \$5,500, cut flowers \$500, for the week ending Easter evening, and other growers of both flowers and plants in about like proportion. I regret that I cannot give more exact flower statistics, as I found that it took too much time to collect them at this busy season for us all, but can say that our firm's sales of roses were not less than 6,000, of all sorts, carnations 10,000 to 12,000, and violets, single and double, at least 8,000 flowers, with large quantities of

snulax, adiantums, double and single daffodils and tulips, jacks and lady-brides selling best in roses, and the carnation, one of our staples, not decreasing the least in its deserved popularity, good double violets coming in next.

Easter is our best of holidays, whether for grower or retailer, a red-letter day in every florist's calendar, for there are more flowers and plants sold, with more profit in this short season, than at any other time; worthy of plenty of time both in thought and preparation, and, in trust we all agree, if our growers especially, endeavor to improve. They have done well this season, but there is still room for improvement. Grow your plants well; not too many of them, but all good. Give a little more time to their preparation for market, clean the pots whenever practicable, cut out all dead wood and yellow leaves, and tie up nicely in good season, and you will find your sales half made and get out your bills and cash beside. Pack carefully for delivering, sending out as many of your likes as you can with flowers just breaking, tie up in paper and arrange carefully in your wagons. There are flowers enough injured many a time to pay for an extra hand or two for a few days. We had but little to complain of this year, our plants being delivered in better condition than any former year. We have found it very desirable to employ extra help for our delivery; a good man or boy will carry out a good many plants in a day, especially for short distances, and without breaking, saving us much complaint and trouble from our customers afterwards.

I have been reading our census bulletin on commercial floriculture by and under the supervision of our commissioner, J. H. Hale, which I suppose you have all received, and are familiar with its contents. I do not think it does us full justice, for we good men or boys will carry out a good many plants in a day, especially for short distances, and without breaking, saving us much complaint and trouble from our customers afterwards.

In nothing is the growing taste for the beautiful more shown than in the rapid development of the culture of flowers, as shown by the statistics given in this pamphlet, and for the first time in our history commercial floriculture has been made the subject of a special census inquiry. It is no doubt true that the great increase in wealth in our large cities has been one great factor in the development of this industry by creating a demand for plants and flowers for the decoration of our homes and parks, but it is equally true that many of humbler means, our mechanics and laborers, are purchasers of plants, especially for their windows and little gardens, for I took particular notice that even among the residents of our smaller streets almost every window had a plant or two, small and inexpensive, but still showing a love for the beautiful and a desire to decorate their humble homes for Easter, a taste we should all encourage, for if every home in this city of homes contained only two or three plants, the supply would fall very short of the demand.

One Good Way to Sell Nursery Stock.

(Read before the American Association of Nurserymen, at Minneapolis, Minn.)

Mr. President and Members of the Association: Before proceeding I desire to say that in responding to the invitation of your secretary to inflict something upon you I wrote: "You may put me down for a short *screen* on one good way to sell nursery stock," and I wish it

distinctly understood that this is a *screen* and not a *read* as announced in the programme.

But to the subject. At the present time in nearly every small place in the country will be found a florist, in the larger towns several. Each one has more or less land in an accessible location. He is to a very considerable extent headquarters for people interested in horticultural matters especially for those leaning toward the ornamental features of horticulture. He knows something about trees and plants. In many cases he is a gardener and small fruit grower as well as a florist. He is a resident of the place, generally has some standing in the community and can be found when wanted. He can't raise nursery stock, but isn't he peculiarly well situated to sell it? If a florist were induced to plant on his place a sample lot of ornamentals, when his customers saw them at their homes wouldn't they be apt to place their orders then, for delivery at the proper season, if he could tell them he could supply specimens like those on his own grounds, and wouldn't it be a great advantage in the sale for the florist to make his prices right and then send a man who knew which end of the tree to put in the ground and plant it properly. Improper planting as you all know has been the cause of the nurseryman receiving much undeserved abuse, as has also the frequent long exposure of the stock in inexperienced and careless hands after unpacking and before planting. If the stock was shipped to a man who not only knew how, but had the facilities to take care of it upon receipt and to whom the customer would look in case of failure, it seems certain that the percentage of failures would be much less and the satisfaction to buyers and consequent increased sales correspondingly greater.

The one good way to sell nursery stock to which I refer is to cultivate closer relations with the florists of the country, and sell to consumers through them.

The florist can, I feel sure, increase your sales and at the same time make a profit for himself. This need not interfere with your present system of selling through agents. The latter reach sections of the country where florists have not yet a foothold. The florist is more generally found in sections that the agents have pretty well drummed over and I regret to add where he has generally left very unfavorable impression behind him. The people in these places do not care to buy any more cats in a bag. They want to buy but they won't do it unless they can deal with someone they know to be reliable and whom they can find again, should the stock not be as represented. And of whom would they rather buy than the man from whom they purchase their other ornamental plants, and in whose judgment on matters horticultural they have confidence? Again, they want to see what they are buying. Colored plates won't do with these people. Colored plates deluded them once, and in colored plates they have no more confidence. Recollections of the Bartlett pear tree that bore Red Astrachan apples still linger in their memories.

You may make arrangements with the florist to take orders for you on commission or you might get them to buy outright wholesale. But the matter must be presented to them in proper shape. I feel sure that the florists are ready for it. Some time since the matter was presented in the columns of the AMERICAN FLORIST and much interest was developed. The

one thing lacking was the knowledge of how and where to get the stock, and the right kind of stock. You nurserymen must supply this. You must present the matter properly to them. Your usual catalogue is not sufficient. You should make up select lists of stock which occurs to you as specially suited for this trade, and be prepared to supply sample lots. Tell them just what you can and will do; talk to them just as the manufacturer of other lines of merchandise talks to those who sell the products of his factory. You are a manufacturer, make the florist a dealer in your goods. I am firmly of the opinion that there will be increased sales for the manufacturer and money for the dealer in this business relation.

Before closing let me point out another advantage of this plan. It is a well known fact that trees and shrubs that do well in one section do not do well in another. Your dealer being right on the ground all the time could soon determine which were best for his locality, and could direct his sales accordingly, thus giving an additional satisfaction to buyers.

I hope that the subject will receive at your hands the consideration which I believe it merits.

Boston.

There has been a big supply of roses and carnations in the market during the past week, but many of the roses are beginning to have that tired look and to get first class stock one has to do considerable selecting. Carnations have been affected favorably by the very cool weather and the average stock is still of very good quality. Lily of the valley is in the market to stay and can be supplied here all the summer through. Sweet peas are quite plenty. A few pink pond lilies are already seen.

The florists have all been kept quite busy on account of the large number of weddings. Norton Bros. were singularly fortunate last week in having three wedding decorations in succession in one church, so that the same plants with slight changes in their arrangement sufficed for all three, without any removal. But having good fortune is Norton's normal condition.

Milk weed balls were used more largely by the florists here than ever before for Decoration Day emblems, some of them having their windows completely filled with these fluffy forms.

E. M. Wood & Co. will offer at the spring exhibition of the Mass. Horticultural Society next year, three special premiums of \$100, \$50 and \$25, for the best blooms of the new rose Waban. Competition will be open to everybody. This is a prize worth competing for and lively times are expected.

J. S. Fay received a certificate of merit for pansies exhibited at Horticultural Hall on May 30. Speaking of pansies, Zirngiebel made a pretty good sale last week. Twelve dollars for twelve plants was the figure.

The rhododendrons in the Public Garden are in splendid shape this year and attract much attention. Pilgrimages to H. H. Hunnewell's to see the magnificent display there are now in order. The place is crowded with visitors every day.

The Gardeners' and Florists' Club at its June meeting voted to include the ladies in the annual excursion this year. This is the first time on record, and is one of the good results of the visit of the National Society to Boston last year.

Mr. A. J. Abbott, who was employed at Horticultural Hall for many years as

janitor, died last week. He was much liked by the people of the society, a number of whom attended his funeral.

Mr. Hugh Dickson, of Belfast, is with us for a few days. If his orders average in length equal to his physical proportions he will have no reason to complain.

Mr. Chas. Storer has gone to Short Hills to spend a few weeks painting orchid pictures for Pitcher & Manda.

Mr. R. C. Patterson and wife of Pittsburgh honored us with a visit just before Decoration Day. It was their first trip to the Hub and their friends here regretted exceedingly the demands of Decoration Day which made it difficult to show the hospitable Bob the attention which he merits.

Mr. Louis Menand, of Albany, has also been spending a few days with his Boston friends. The old veteran is accompanied by his daughter. May he live to come again many times, is the hearty wish of his many admirers and friends here.

W. J. S.

New York.

The past week has been the worst of the season. The market has been overstocked with cut flowers of all kinds and no demand. Never before have roses and other flowers sold for such low prices as last week. But as there are several large weddings during the next two weeks we look for a big improvement.

The supply of roses will be getting shorter from now on, as a number of the large growers have commenced throwing out their old stock and replanting.

There are large quantities of Cape jasmines in the market, shipped here from the south, but the prices obtained for them have been very low.

Mr. P. Connelly, of Madison, sails for Europe Wednesday, the 10th, on the City of New York.

JOHN YOUNG.

News Notes.

OCONOMOWOC, Wis.—J. T. Bartlett's greenhouses were badly hit by hail June 4. Insured in the Florists' Hail Association.

CINCINNATI.—Alfred Forder reports loss of 1,700 feet of glass by hail June 5. His neighbor lost 2,000 feet and many other places were badly cut up.

WOOSTER, O.—The Wooster Floral Club will give its first exhibition November 4 to 6 next. Copies of the premium list may be had on application to the Secretary, Mr. W. A. Porter, Wooster, Ohio.

NEW HAVEN, CONN.—The Chrysanthemum Club has enlarged its executive committee, and expects to have an unusually fine exhibition next November. Prizes to the amount of \$250 will be awarded.

CLYDE, O.—On June 3, E. Hall & Son lost 2,500 square feet of single thick and 250 square feet of double thick glass by hail. No insurance. Many of the stones weighed from four to six ounces. Great damage was done to crops in this section.

EAU CLAIRE, WIS.—C. E. Griffiths has taken an eight year lease of B. F. Millard's place and will continue the business. Mr. Griffiths came from England about a year ago. He is a son of Thomas Griffiths, the well known English rose grower, near Hereford, and was for eighteen years with John Cranston & Co.

ATLANTA, GA.—C. A. Dahl & Co. is the style of a new florist firm here, composed of C. A. Dahl, formerly of Vineville

Greenhouses, Macon, Georgia, and Colonel W. S. Thomson. They are erecting two houses 20x100, and two 10x100, with office 15x35 and potting shed 12x 60. Double thick 14x14 glass is being used, butted after the system described in the FLORIST by Mr. Dale, of Brampton, Ontario.

SPRINGFIELD, MASS.—The spring exhibition of the Amateur Horticultural Society will be held next Tuesday and Wednesday. Memorial Day trade here was the largest in years, though prices were high. Bedding stock is bringing good prices, with the exception of verbenas, pansies and geraniums. Pansies and verbenas are sold at 35 cents a dozen, and geraniums at \$1 a dozen, which leaves but a small margin for the grower. The Hampden County Horticultural Society will hold a rose and strawberry exhibition and festival in the city hall Thursday and Friday of next week.

ST. JOSEPH, MO.—The semi-annual meeting of the Missouri State Horticultural Society, held here June 2, 3 and 4, was a very interesting and successful one. Among the papers read was one on "The florists and their growth in Missouri," by Hans Nielson, of this city. A resolution asking that 20 per cent of the \$150,000 appropriated by the state legislature for a World's Fair exhibit be devoted to a proper representation of the horticultural products of the state, was adopted. A resolution protesting against the appointment of Walter S. Maxwell as Chief of the Horticultural Department of the World's Fair was also adopted.

BALTIMORE.—The Gardener's Club, in order to cultivate a taste for flowers among children, will father a new department for this locality by the free distribution of plants among school children, the plants to be matured and exhibited at the fall chrysanthemum show. Mr. John Donn has already the names of over 100 pupils of public and private schools, which have been given him by the teachers, and he will shortly appoint a day and a place at which the children will be notified to call for their plants. One day of the fall show, to be known as "Children's Day," will be set apart for the young gardeners, and no admission will be charged. Their plants will be put on exhibition, and whatever prize or prizes are up for competition will be awarded by the judges. With each plant given out will be presented printed directions for the management of chrysanthemums. The rules contemplated will not prevent children who have procured their own plants from competing with the others, but no one over fifteen years of age will be allowed to compete. It is the purpose of the projectors of the plan to get eight or ten names of children from each of the schools, through the teachers, who are expected to select those children who will probably expend sufficient care in rearing the plants to bring forth the best results.

WHEN sending us small amounts in postage stamps, please select those of the 2-cent denomination.

WHEN remitting small amounts by check, please add ten cents to the amount or the check to pay the exchange on same.

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

THE AMERICAN FLORIST

Subscription \$1.00 a Year. To Europe, \$2.00.

Advertisements, 10 Cents a Line, Agate;
 Inch, \$1.00; Column, \$14.00.

November 11-13, Utica, N. Y.—Fall exhibition Utica Florists' Club.

November —, New Orleans, La.—Chrysanthemum show New Orleans Horticultural Society.

November —, Buffalo.—Chrysanthemum show Buffalo Florists' Club.

November —, Washington, D. C.—Chrysanthemum show Washington Florists' Club.

November —, Providence, R. I.—Chrysanthemum show Rhode Island Hort. Society.

November —, Baltimore.—Fall exhibition and chrysanthemum show Gardeners' Club of Baltimore.

November —, London, Ont.—Chrysanthemum exhibition Forest City Florists' and Gardeners' Society.

November —, Germantown, Pa.—Chrysanthemum show Germantown Hort. Society.

November —, New Haven, Conn.—Chrysanthemum show New Haven Chrysanthemum Club.

THE FOREMOST QUESTION horticulturally continues to be, who shall be Department Chief of the World's Fair? California having been granted the honor of naming the man in consequence of her efforts financially and otherwise on behalf of that enterprise, it would seem to be the view of the local Board of Control to confirm her nominee, provided certain charges made against him could be disproved.

The latest rumor as we go to press is to the effect that Mr. Maxwell has convinced the Chicago committee of the falsity of some of these; they say further, however, that the matter is not decided. Meanwhile a very strong representative committee from the Nurserymen's Association, with such men as Barry and Garfield at the head, are making a final protest. If these fail, it would certainly appear that horticulturists count for but little in this appointment.

A GLANCE at our list of coming exhibitions in this issue and at the list published at same date last year shows a remarkable increase in the number of exhibitions to be given the coming fall. The stimulating influence upon the trade of all these exhibitions all over the country can hardly be estimated. And the chrysanthemum has been an important factor in bringing this about. With this flower to supply the bulk of the material, exhibitions have been possible where without it the attempt would not have been made. But while the chrysanthemum must be our main dependence in our November exhibitions do not fail to display all other flowers available at the season. Give the people as much of a variety as you can.

WE BELIEVE that the essay on Easter plants and flowers, read by Mr. Thomas Cartledge before the Florists' Club of Philadelphia at its last meeting; and which appears elsewhere in this issue, will be much appreciated by our readers. Mr. Cartledge is a member of the Philadelphia firm of Pennock Bros., and his experience in the retail branch of the business has been long and varied, and what is directly to the point, eminently successful.

WE HAVE received a copy of the preliminary list for a grand horticultural exhibition to be held at Ghent, Belgium, August 23 to 30 next, under the auspices of the Cercle Horticole Van Houtte. There is a lengthy list of prizes consisting mainly of gold, silver and bronze medals.

IF YOU LIKE the AMERICAN FLORIST give it your fullest support by confining your orders to those who advertise in its columns and mention the paper when ordering.

Catalogues Received.

United States Nurseries, South Hills, N. J., new and rare plants; same, hardy perennials; J. M. Thorburn & Co., New York, trade list seeds; same, forcing bulbs; Wilfred A. Brotherton, Rochester, Mich., Michigan wild flowers; same, trade list same; same, plants for carp ponds; Margrave & Ward, Hiawatha, Kan., plants.

Minneapolis.

Mr. R. J. Mendenhall's already extensive plant is being further enlarged by the addition of fourteen large houses, the construction being entirely of brick, iron and glass. And in addition to this he is making arrangements for the erection of a range of ten new houses, to be located some distance out of the city. The construction of the new houses is on an entirely new plan, and the result of the venture will be of decided interest. The sash bars are of galvanized iron, with drip gutters, the glass is bedded in putty, and the bar then covered with a galvanized iron cap attached to the bar by copper strips in such a way that the cap can be readily removed for the replacing of broken glass. The roof has a rather fragile appearance, there being but one purline of angle iron, and consequently but one row of supports through the house. The houses are fully eighteen feet wide. The houses are built together; joined by galvanized iron gutters of large capacity, the weight of the roof resting on iron castings, which set on the brick wall saddlewise and extend up to the top of the iron gutter. Most of the houses are of the three-quarter span style, facing south, and with the view of keeping one from shading the other, each one is six inches higher than the one to the south of it. As they are on level ground, this brings the one farthest to the north pretty high up. In addition to the three-quarter span houses is one with a very high equalspan roof for palms, the sides also of iron and glass, of quite fragile appearance. The roof will be supported by trusses. The action of this house under a high wind will determine whether this construction can be considered desirable. The cost of the iron sash bars by the plan adopted is said to be no more than that of the wooden construction, and the contractor who is building these houses guarantees them to last for forty years. The result of this experiment in construction will be looked for with interest, especially as to the action of the iron sash bars in the climate of Minnesota during what the fruit growers term one of their "test" winters.

Mr. Mendenhall's place is a decided surprise to Eastern visitors. Such a large, well built, and generally well arranged and conducted establishment is not generally looked for in the great new West. Mr. Mendenhall has a very efficient foreman in Mr. Allison, and the young roses which were being grown to stock the new rose houses were in a condition to do credit to any grower.

54 La Salle Street, CHICAGO.

Re Seed Trade.

SEED TRADE ASSOCIATION.

ALBERT M. McCULLOUGH, Cincinnati, president, JOHN FOTTLER, Jr., Boston, secretary and treasurer. The ninth annual meeting at Cincinnati, June, 1891.

The Seed Trade Association.

CINCINNATI, JUNE 9.—The American Seed Trade Association convened in annual session this morning at the Bunnell House. Among those present in person or by representation were the following:

Currie Bros., Milwaukee;
S. F. Leonard, Chicago;
Sam'l Wilson, Mechanicsville, Pa.;
A. J. Brown, Grand Rapids, Mich.;
W. W. Barnard, Chicago;
P. Barteldes & Co., Lawrence, Kan.;
A. D. Cowan & Co., New York;
Wm. Mezgaht, Wethersfield, Conn.;
D. I. Bushnell & Co., St. Louis;
C. Young & Sons Co., St. Louis;
Albert McCullough, Cincinnati;
Jno. Fottler, Jr., Boston;
J. C. Vaughan, Chicago;
Johnson & Stokes, Philadelphia;
V. H. Hallock & Son, Queens, N. Y.;
Emerson Seed Co., Omaha;
Z. De Forest Ely & Co., Philadelphia;
Storrs & Harrison Co., Painesville, O.;
Robert George, Painesville, O.;
F. E. McAllister, New York;
Albert Dickinson, Chicago;
Richard Protischer, New Orleans;
E. B. Parsous, Falsington, Pa.;
C. A. Reeser, Springfield, O.;
Robert Livingston, Columbus, O.;
W. H. Maule, Philadelphia;
And Mr. Ford.

The Cincinnati people will entertain the visitors with an excursion, concluding with a dinner at Kennedy Heights on Friday.

MR. WILLIAM KELWAY, of Langport, England, is making a two months' trip in this country. This happens also to be the honeymoon journey for Mr. and Mrs. Kelway, and they find it quite delightful. Messrs. Kelway & Son are the largest growers of gladioli in England, and do many herbaceous perennials in quite a large way.

JOHN LEWIS CHILDS, of Floral Park, New York, and V. H. Hallock & Son, of Queens, New York, have combined their business, the retail trade to be carried on solely by John Lewis Childs, while V. H. Hallock & Son will devote their entire time to the wholesale trade.

Cleveland.

The partners of the firm of Gooding & Webb, the florists at No. 1216 Euclid avenue, have had a disagreement. Mr. Webb brought suit in the Common Pleas Court yesterday, praying for the appointment of a receiver. He claims that he entered into an agreement about a year ago to buy a half interest in the business for \$2,000, paying \$1,000 down and giving two notes for the balance. He claims to have since discovered that the condition of the business was misrepresented to him. He says that he is a practical florist and has labored hard for the success of the business, but that his partner is not disposed to give him a fair chance. Recently, it is alleged, Mr. Gooding inserted an advertisement in the Pittsburg newspapers offering the business for sale to an "enterprising florist." An injunction was granted restraining Mr. Gooding from selling the business until the controversy can be adjudicated by the courts.—*Cleveland Leader*, May 28.

CHOICE AMERICAN GROWN FREESIA BULBS, READY IN JUNE.

We have had grown for us 100,000 Choice Bulbs of **FREESIA REFRACTA ALEA**, which we offer on contract orders booked now, until stock is exhausted, at the following prices:

FIRST SIZE, SELECTED, much larger than French grown bulbs. Per 100 Per 1000
PURE WHITE, SELECTED, EXTRA, very fine bulbs. \$1.00 \$ 8.00
Special rates on application for large orders.

FLORISTS USING LILY OF THE VALLEY BERLIN PIPS, ROMAN NARCISSUS, NARCISSUS, DUTCH HYACINTHS, TULIPS, Etc. will do well to send lists for our special offers. The quality of our Bulbs is unexcelled.

You will benefit the AMERICAN FLO-
RIST by mentioning it every time you
write an advertiser in its columns.

Sex in Amaryllis.

Mr. Peter Moorshiser, of La Salle, Ill., a German florist and gardener of long standing, had been boarding a reluctant amaryllis for a lady customer, Mrs. A., for some two years, when she called one day with her daughter and asked among other things after the flowering of this bulb. Mr. M. replied that it had not yet bloomed, whereupon Miss A. suggested that it was possibly a male bulb. "No," replied Mr. M., "that can't be, for it has already produced five young bulbs." Of course that settled it.

At the great World's Fair of 1893 every plant exhibited should be plainly labeled. And by plainly we mean labels that can be read at a glance a few feet distant. Large specimens should bear labels legible at a distance of twenty feet. Without such labeling, much of the educational influence of an exhibition is lost. The same principle applies to all exhibitions. We believe no better investment could be made by organizations giving exhibitions than to appropriate a sufficient sum to provide labels of the size and style needed to tell every interested visitor at a glance the name of the plant under inspection.

When you write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words a line). Cash must accompany all ads. Plant ads. not admitted under this head.

SITUATION WANTED—By competent florist and gardener at once. No references. Address: Wm. Klotz, 1017 S. Spring Garden St., Phila., Pa.

SITUATION WANTED—By a lady who has had experience in cut flowers and design work. Address: Florist, 124 Sherman Ave., Cincinnati, O.

SITUATION WANTED—A first class make-up department for the spring market out of town. Address: G. W. Humphreys, 321 West 23rd street, New York.

SITUATION WANTED—By a first class florist: S. German, in a private or commercial place; 8 years' experience; understands handling of greenhouse stock thoroughly. References. Address: G. K. care Biederender & Muller, Hoboken, N. J.

SITUATION WANTED—An experienced nursery grower, used to taking charge of cut flower establishments, wants a good situation as soon as possible. References of the best, such as Craig Bros., Phila., and others. Address: L. B. care Am. Florist.

SITUATION WANTED—As foreman or superintendent of a large commercial place. Best of references from the leading florists in Eastern Illinois, also best of reference from business men of the city and Iandale, Ill. 30 years' experience. Married, small family. Will be ready to come in July or August. State salary and length of term desired. Address: A. C. WASSON, Hopewell, Ill.

WANTED—A good gardener and propagator, and man capable of doing any kind of work on a large commercial place. Address: HENRY MOORE, 54 Beale St., Memphis, Tenn.

WANTED—A married man who has had experience on a commercial place, to take half interest in a large place. Nine years' experience. Will be ready to come in July or August. State salary and length of term desired. Address: A. C. WASSON, Hopewell, Ill.

WANTED—Experienced salesmen with knowledge of seeds, bulbs and plants, wishing a permanent position and willing to start at a moderate salary, where ability and energy will be recognized and by advancement. Should apply by letter, stating experience, age and salary expected. Address: PETER & MANDEL, Short Hills, N. J.

WANTED—PARTNER—A competent reliable man with \$2,500 can secure chance seldom offered. Must know how to raise cut flowers and plants. Unlimited trade now well established. Present manager had had sale for all that rate of 10,000 per acre of glass 2 acres of ground; net business of \$12,000 per annum. Address: W. C. care Am. Florist.

FOR SALE—2,000 feet of 4-inch pipe; also one No. 6 Hitches boiler in good condition. Address: Wm. A. Bock, North Cambridge, Mass.

For Sale.

A fine lot of *FICUS ELASTICA*, 3 to 4 feet, well furnished with leaves; 5 and 6-inch pots. Also *Ficus Nitida* and a fine lot of all kinds of plants in bud. Address: HENRY MOORE, 54 Beale St., Memphis, Tenn.

PANSIES.

PANSIES THAT ARE UP. No need to worry over getting the seed to come up, it is up and ready to plant when I send them.

It is not only the plants that are up, the strain is up also; up to, and a goodly number of my customers say, above any strain in the market. The price is down, considering the quality of the strain, seed as good would cost you about as much per 1000 plants. My price is \$5.00 per 1000, or in lots of 2,500 and over, \$4.50 per 1000.

SEND FOR LIST AND SHORT PAPER ON CULTURE.

PLANTS READY AUGUST 20th TO DECEMBER 1st.

SMILAX.

Plants ready July 1st and later. These will be nice and stocky, and ready to go right ahead. There is some 40,000 here; let me have a chance to fill your order.

Send 10 cents for samples and get my prices before ordering elsewhere.

F. A. BALLER, Bloomington, Ill.

Buffalo.

Decoration day trade up to or somewhat ahead of the average of former years. Cut flowers and plants are called for more each year, designs less. Lilacs were just in season and helped nicely. On Wednesday of last week D. B. Long arranged a hand bouquet for a bride to special order, modeled after those in vogue in the London drawing rooms, the flowers being arranged one-sided and outlined similar to the shape of a garden tower. The flowers used were white roses and cat-tails, with asparagus for the supporting foliage. 'Twas very English. The following Wednesday he arranged a sort of canopy in a large window by suspending or hanging up garlands of snowballs; an inexpensive, quickly made affair, that was graceful and pretty, the fluffiness and pure white of the flowers heightening the general effect to a remarkable degree.

Weddings were numerous this week and all hands busy up to and including Thursday.

The plant men are all driving busy now filling orders and some blocks of stuff in their houses already show a decided thinning out.

J. H. Rebstock made an effective plant decoration in the entrance stairway of the Academy of Music at an opera performance by the Bostonians on Tuesday.

Gustavus Schoenfeld, of Westfield, showed a seedling carnation of a lovely shell pink tint, quite distinct and novel. "Nautilus" is its cognomen. If its habits turn out favorable it is bound to be heard from some day.

Prof. Cowell's greenhouse on East Ferry street is not the largest in town, but the botanical treasures are there, and a scientific glow pervades all. Just now nasturtiums and petunias are conspicuous.

100,000 YOUNG PALMS FOR GROWING ON.

Der Sandwirth.

Edited by
W. WERNICH,
Milwaukee, Wis.

Praktischer Rathgeber für Feld und Haus.

THE FARMER—PRACTICAL ADVISER FOR FIELD AND PASTURE.

Published Monthly,
BY
GERMAN P.T.G. AND
PUB. ASSN.
St. Louis, Mo.

The circulation of "DER SANDWIRTH," German Agricultural Monthly, is now 32,000. The advertising rate of Ten Cents per agate line each insertion is maintained. This circulation exceeds that of any German agricultural paper in the United States, but one, and is exceeded by very few only of the publications of this class in the English language.

To convince advertisers of the merits of this paper as an advertising medium, we have concluded to give them for the first time the benefit of the advertising agent's commission of 15 per cent., when order accompanied by cash, is received before June 20th.

This makes the net price 8 1/2 cents for ten lines, \$5.50 for one hundred lines, \$55.00 for one thousand lines. Considering the circulation, this price is extremely low, and the reduction is made for the JULY ISSUE ONLY.

We trust you will avail yourself of this exceedingly favorable offer. Awaiting your order.

Very Respectfully,

L. BLANKEMEIER, Manager.

NARCISSUS. FOR FALL DELIVERY 1891.

My Special Trade offer of all the leading kinds may be had on application. I have an **IMMENSE STOCK**, probably the **LARGEST IN THE WORLD**. All the leading popular varieties, especially the **MARKET** kinds, to which I pay special attention.

My stock of **DOUBLE DAFFODILS** is remarkably fine, and is recognized by both the American and European trade as being one of the **BEST STOCKS IN THE MARKET**—all of the true deep yellow old English variety, and not the dirty green kind which has been foisted on the market the last few years, and which is of no use to anyone either for forcing or cutting. To ensure this stock you **MUST ORDER EARLY**, as many late orders I was unable to fill last Fall, owing to the increasing demand for this valuable stock. **GOLDEN SPUR**, **OBVALLARIS**, **RUGIOLUS**, **MAJOR**, **PRINCEPS**, **MAXIMUS**, and many of the best yellow Trumpets I can offer upon very advantageous terms. All guaranteed true and carefully graded. **SEVERAL ACRES** of Early White, Late White, and Double White Posticus. My stocks of these are enormous, and I can fill orders to any extent and at very low rates.

Of the newer varieties, I grow only the best, and these in large breadths, and can offer **HORSFIELDI**, **EMPEROR**, **EMPRESS**, **SIR WATKIN**, **BICOLOR**, **GRANDIS**, and all the best of the two colored Trumpet varieties, in fact I can offer every good variety that may be considered worthy of cultivation. Also all the best varieties of the **INCOMPARABILIS**, **LEODI**, and **NELSONI** groups, many of which are of undoubted merit, both for cutting and general decoration. My list also contains many other Miscellaneous types, and before placing your orders you should see my New Catalogue. The stocks are true, and thoroughly well graded; prices low, and will compare favorably with any English or Continental house.

In addition to above will be found a select list of **LILIES**, **IRIS** and **PEONIES**, **PYRETHRUMS**, **BEGONIAS**, and a most unique collection of **HARDY PERENNIALS**, including all the best in cultivation and many other plants not offered by any other house. It also contains a full description of the **NEW PINK**, **HER MAJESTY**, the greatest novelty of the season, and which I purpose distributing for the first time during the Fall of 1891.

Opinion Wanted.

I would like the opinion of some of the brethren in the trade upon the following described transaction:

On January 10, last, I sent an order to a prominent house in the trade for 100 ivy geraniums "in as many varieties as you can furnish."

I received 116 plants labelled Elfrida, Butterfly, Caton, Princess Alexandra, Innocence, Eclipse, Elegans, Candeur, Mad, Dubus, Venus, Leola, Mimme, Premier, King Albert, Ansel I. Simme, and Lucy Lemoine; 8 plants of each except the last of which there were 4. I wrote to the house for a description as to single and double and colors, which I received and the names and colors were printed in our catalogue.

I propagated a stock of about 500 plants and now they have come into bloom. I find the first eight varieties named in the list to be *exactly* alike,—single lavender. The next four are alike,—double magenta-pink. The next two are alike,—semi-double lavender.

So I received in all 64 plants of one variety, 32 plants of another, 16 of another, and 4 of another,—four varieties in all; the descriptions as given do not correspond except in three instances, which are apparently accidental.

The house which made this sale to me insists that the plants were correctly labelled, that the varieties are well known to the trade, that they are exactly as originally received from the French growers, and that in any case, on account of the wording of my order "as many varieties as you can furnish," I have no claim upon them.

Now I am a novice in the trade and would like the experienced members of the guild to tell me whether the varieties named are well known to the trade, and whether they are exactly alike as claimed, and, whether, taken altogether, the transaction was a fair and honest one throughout,—just what any first-class house in the trade would do under similar conditions.

Cyclamens for Early Flowering.

Now that premiums are being offered for cyclamens in common with other winter-flowering plants at the chrysanthemum shows, special attention to their cultivation will be necessary in order to be able to present anything like creditable specimens. The practice generally followed by cultivators of repute is, when the plants have made their season's growth and show signs of going to rest, to shake or partially shake them clear of the old soil and re-pot them. Those who require their plants to bloom in November, however, had better make sure that this work is done sufficiently early in the season to admit of their plants coming into flower at the proper time, otherwise it is advisable to avoid the re-potting and simply give them a good top-dressing with loam, bone meal, sand, and broken shells.

Growers who have vigorous young plants in 3-in. or 4-in. pots may secure the end in view by shifting them into 5½ in. or 6-in. pots and growing them in a cold frame during the summer months. When removed into warmth in autumn assist them with weak liquid manure or some good fertilizer sprinkled on the surface of the soil. By this system we have successfully attained the object in view. Referring to the system of turning cyclamens out of their pots into prepared beds either in the open or under a frame, no objections can be raised provided they are potted up in good time in the autumn. My experience, however, has been that plants which were restricted to pot culture were more readily got into bloom when wanted for conservatory decoration before the end of the year.—*The Gardening World.*

CHICAGO, JUNE 17.—Late yesterday afternoon Director-General Davis presented a third nomination for chief of the horticultural department of the World's Fair. William Forsyth, of California, was the gentleman named, and he was promptly confirmed by the board of control. The directory has yet to act on the appointment. Mr. Forsyth is the national commissioner who pushed W. S. Maxwell for the place.

Color Harmony Among Flowers.

There is a great deal of meaning in the word harmony; it means first of all things—peace; everything outside of and in contrast to harmony simply means—war and distraction. It is absurd for us to believe that flowers are exempt from any elements which will produce dissonance and confusion because they are in themselves perfectly beautiful.

There is a story told of a certain very pretty western girl, who when she heard that a Baltimore belle would be present at the ball she expected to attend, declared her intention of remaining away. Perhaps the young lady was right, it might have happened that both she and her rival were blondes or brunettes, in either case the comparison which would be unavoidable might not be in her favor. Thus it is with our flowers; the most beautiful of them are quite likely to damage each other by mere contact. There are some brilliant and showy scarlet geraniums; they are lovely among the greens of the lawn, but pick a cluster and place it beside any one of the pink varieties and we have instant discord—war! But here is a copper birch beside us; we will pick a slender branch or two and place them with our scarlet geraniums in yonder dull olive green vase standing in the porch; the result is a harmony of color which will rest as well as please our eyes. We must remember too that scarlet is a color which works violently with its surroundings unless they be of the right sort. And although the copper-birch leaf and the geranium flower make a queer couple for a match, at least in point of color, they agree with one another perfectly.

We will have an opportunity now in the early summer of disposing in graceful groups some of these beautiful toned hydrangeas, say for a garden party. Here are some specimens of a decided pink, there are some of a purplish tint, yonder are some perfectly blue ones and occasionally we see some half developed green-white ones; if we combine a good mass of all these colors and arrange them skillfully, so they run together somewhat, we may produce the effect of a lovely bank of graduated color. Beginning at the bottom with our green-white, next taking a number of the palest blue, next the deep blue, and after the purplish blue, then slipping in a pot of the purple color and finally topping all with our pink ones, we will gain an effect suggestive of the rainbow, but delicate of color; the blue thus finally running into the pink gives us a very lovely cool effect for a warm summer afternoon. We will take it for granted that the house is colonial and its decorations are almost entirely in gold and ivories and creamy yellows. Here is our opportunity for the use of any and all the blue flowers we can obtain. If violets

are not gone we may use them in all shades, on the tables, in doors and for bouquets for the ladies, always remembering that the green leaf must not be thrown aside, nor the bit of violet blue ribbon of pale tint forgotten, to tie about the stems. There are forget-me-nots too which we can use plentifully in beds where we wish any, and in the filling of any little white vases we may spy waiting among the brie-a-brac to make themselves useful. Now we can use what white roses we wish, Brides, Niphetos and even the good old fashioned Baltimore Belle. We may even use the Madam Cusin, but we would best leave all "Jacks" and all pink and yellow roses out of consideration; we do not need them and we should in every way emphasize our blue and white combinations, leaving all yellow effects to the house itself. In a word, produce in blue running toward the pink in white and in cream colored flowers all our decorative work. Perhaps the creamy yellow Buttercup pink is none too yellow for our purpose and will combine well with any of our pale blue flowers. We will try the experiment anyway and if there are any pieces of blue and white china about we will fill them with the pinks and perhaps add a blue flower or two. There is plenty of the blue in now and we may employ it in any decoration scheme that gives us a wall for background, not forgetting the beautiful green leaves. I prefer myself to see the iris placed in white or pale green glass vases, so one may see the water, which in nature is its constant company. There are pansies now, blue as violets, and others of a pale purplish tint, which we ought to use where we need an expanse of low or flat decoration. Pansies ought to be mixed indiscriminately; there is a strong temptation to do this on account of the great variety of color they possess. But we would better sort them out, keep the bronze and yellow together and the blue and pale purple side by side. The white ones are very dainty and will always mix well with any of the pale toned varieties. But when we come to the dark purple, black and dark blue-violet varieties we must be careful and employ them sparingly, perhaps only for strong contrasts.

It is an open question whether more than three varieties of a flower can ever properly be placed side by side, and no principle of good taste broken. Our safest combinations of flower color always run inside of three tones. When we use the broad and effective paony for decoration we ought not to put more than two varieties together; try more and see the result. Your third variety, nine chances in ten, will be so much "waste powder and shot" flying over people's heads. A great bunch of white panies in a bowl shaped vase is an effective bit of decoration, especially if the bowl is yellow or

pale blue; add to this group a single one of the pink or crimson variety and your decoration scheme is ruined; there is an element of discord introduced and the harmony is gone.

When it comes to combinations of flowers possessing intense hues we are on particularly dangerous ground. The safest method of treating the "jack" rose, the crimson paeony, the black pansy, the scarlet poppy and the bright hued gloriole is to let them alone; that is, do all you can with them in a group of their own, use white flowers for the sake of sharp contrast if you will, but do not let us attempt any color combinations here; already we have all the color necessary and an added yellow, blue, orange or pink will surely result in chaos. We must remember just here that "enough is as good as a feast" and the time was when baskets of flowers containing from ten to fifteen different kinds all jumbled together so no clear impression of the whole was possible, pleased people. We do not care any more for samples of flower gardens, we want a basket of pinks or a garland of red roses or a jar of golden daffodils; something in fact that will convey to our heads and hearts one simple and perfectly beautiful idea.

F. SCHUYLER MATHEWS.

Paris.

The annual exposition of the National Horticultural Society of France, held May 20 to 25 in the Champs Elysees, was a complete success, as usual. From the fine displays of exotics in the main hall to the rows of lettuces, beans, and radishes modestly growing under a tent at the side the arrangement was perfect.

The Pavilion de Ville, in which the greater part of the exhibits were placed, is a large hall lighted from above, in which the plants shown were arranged in beds and borders, so that the effect of a wonderful garden was complete. Just within the entrance a large grass plot furnished the background for Messrs. Vilmorin's beautiful calceolarias, *Primula cortusoides*, stocks and double cinerarias, which were used to border its four sides, with an edging of nymphaeas. To the right an immense bed of tuberous begonias of remarkable size and loveliest coloring; another small bed of the new tuberous begonia Louise Robert, shown by Messrs. Vilmorin, who have bought the stock; it is a lovely double rose, of medium size and height, and very tree. A very pretty feature of the show were the various exhibits of blooming clematis, grown in pots and displayed where their great discs of blue and white would show to best effect. Jackmani, of course, was there, and Jackmani superba, a deeper shade and rather rounder flower; La France, very large and bright blue, Duchess of Teck, an extra fine white, the Queen, a charming lavender; Ville de Paris and Fairy Queen, very large and pink tinted, but said to be tender; John Gould Veitch, a very popular double lavender; Gloire de St. Julien, a grand white; Henry, Lucie Lemoine, Mme. Van Houtte, Patens Sicboldi and many more made a glorious show.

The collections of orchids attracted, perhaps, the most attention of any class, and were always surrounded with admiring crowds. Gold medals were awarded Messrs. Peters and Garden for very fine exhibits. Mr. Sander sent a plant of *Cypripedium Rothschildianum* showing three blooms on the stem stalk.

Many geraniums were shown, old and

new, but these exhibits were not so attractive as the other classes; the best new sorts I noted were Gloire Lyonnaise; Ceres, a good shade white, but rather small; President Chandon de Briailles, a single pink of a very pretty shade, and very large and full. A new pelargonium, Imperatrice des Indes, was much admired, but is hardly a distinct advance. Fancy leaved caladiums were shown in magnificent assortments, and most of them bore the low temperature of the pavilion very well. Several collections of greenhouse plants showed fine specimens of araucarias, *Dracenas Lindem*, *Camellia*, *rubra*, *terminalis*, etc., crotons, with white leaves and ornamental at the side with red roses and white iris. The most graceful arrangement of all was an onyx pedestal, on which stood a pretty marble Cupid, while behind him rose a stem of reed trimmed with orchids, and two long branches of orchids and a bit of floating asparagus formed a tall canopy over his head. Two bridal bouquets, set in satin and lace holders, were far from showy; one was of white roses, half blown, with sprays of gladioli; The Bride; the other was a pyramid of orange blossoms. The holders are small, and a wide edge of lace falls over the hand. A table decoration consisted of a solid mass of single azalea and rhododendron blooms with three bouquets of *Cocos Weddelliana* and roses. A basket of half a dozen tigered calceolarias plants was gorgeous with ribbons to match; a square bamboo fire screen, hung with blue silk, had sprays of orchids and asparagus, rising from the bamboo frame across the blue with dainty effect; the whole was surrounded with palms. The sides of the hall were largely filled with rhododendrons and Azalea mollis in the greatest variety.

At the west end of the pavilion was a tent 100 yards long and about 10 wide for the rose exhibits, mostly standards, which included all the old favorite sorts. Two very pretty exhibits were made by Messrs. Forget and Vilmorin of annuals and biennials planted in long, rectangular beds, perfect masses of bloom, but so arranged and softened as to color as to lose none of their beauty from sharp contrast. The *Convallaria majalis grandiflora* was shown almost double the size of the ordinary lily of the valley.

The display of vegetables was very interesting, as well as refreshing, after the bewildering floral display. I was amused to overhear one gardener standing before M. Kigault's potatoes say to another: "I would rather have two such tubers than six begonias." So do tastes differ, even in France.

F. L. VAUGHAN.

Group of *Cypripedium Caudatum* forms.

The illustration is engraved from a photograph of a group of plants in the collection of W. S. Kimball, Esq., Rochester, N. Y., kindly sent us by Mr. George

Savage, who has charge of Mr. Kimball's splendid collection.

Regarding the plants shown Mr. Savage writes:

"The one to the left is an extra fine form of *C. caudatum Wallisii*, lasting very much longer in flower than any other of the type.

"On the floor to the left is the new *C. Kimballianum*; next, *C. Schomburgkianum*, also *C. Stonei*.

"Every one that sees a fine grown plant of *C. caudatum*, cannot fail to admire it, this being such a remarkable and singular flower, the petals sometimes growing down to the length of from twenty-five to thirty-five inches."

Advertise the Flower Show.

When engaging in the business of conducting a Flower Show, we enter almost in the occupation of the "showman." Months of earnest work and effort, for which we should be rewarded, needs to be so arranged, planned, and developed, as to result in a success, not only as a show satisfactory to us as florists, but also as an attraction to the public and a financial success as well.

A too frequent report is of such tenor as this: "Our show was a success as an exhibition, but the attendance was light and we did not make a financial success of it." Such a condition of affairs is too generally the case. Must such be? Considering how comparatively light are the actual outlays for a flower show, as a result of the craft donating so much of what makes the display, these cases should almost never occur.

What can remedy this state of affairs? One thing will do it, if gone at rightly, and that is, ADVERTISE THE FLOWER SHOW. Advertise it big, and circulate and display printed matter freely. You are honestly preparing to give the public a large value for the small admission fee to be charged, so you are justified in advertising it boldly, even to boasting some about it.

Someone says: "We did advertise, and all we dared to invest in that way, but it did no good." If such was done, something must have been amiss in the way it was done. Let us look at the matter intelligently and take notes. First, we will notice how thoroughly the amusement loving but selfish public is appealed to by our co-laborers in the amusement field, who are regularly in the amusement business. Spite of the fact of the public being thoroughly posted on what to expect in theatrical entertainments, through continual familiarity with them, the highest grade of plays do not merely announce their coming to town. The advanced period of heralding of their coming is limited only by the number of advance agents they can afford to employ, and who follow each other in succession. Here you have a great advantage, inasmuch as your show can advance agents without salary or traveling expenses, and who are on the ground, familiar with it, acquainted with everybody, and so can exert personal influence in a way that will tell.

These advantages rightly employed should count greatly. Talk about your show often and earnestly. Boast a little, inside of prevaricating. The shows are given only at long intervals, so people forget what they mean, others don't know, or are indifferent, from having seen only poor attempts in this line, and much reminding must be done. It's a mistake, I am sure, to wait till only a

FORMS OF *CYPRIPEDIUM CAUDATUM*, AT MR. W. S. KIMBALL'S, ROCHESTER, N. Y.

week before the show begins to circulate information and printed matter.

In May of this year the Buffalo Musical Association conducted a May festival lasting four days, at which six performances were given. The sum of \$25,000 in round figures was expended, and all but about 10 per cent of it was realized, the only source of income being from admis-

sions. But they advertised it thoroughly. It had been actively projected a full year beforehand, the local press continued to give it publicity. A flourish was made over the liberal subscribing to a guarantee fund of over \$50,000. For a full month before the festival was the town placarded freely with their announcements. If a music festival can

realize such receipts, a good flower show with its affairs well managed should be a financial success every time. On the average in our towns I think 10 per cent of what was realized by the above mentioned music festival would amply pay expenses of a flower show, and 'twould seem a sad reflection, either owing to mismanagement or a positive lack of in-

terest by the general public, could so much not be accomplished.

The different clubs should harmonize, looking to use of similar forms of the miscellaneous printed matter needed, so with a slight changing of names and localities provided for in the get up of such it might all, or nearly, be done by one printing concern. Such an arrangement no doubt would cheapen it much to the clubs individually, and avoid by each the long winded work of preparing the matter, etc. The writer has been studying somewhat on the matter of what is known as a "three stand," (or consisting of nine sheets) poster for large display, and adapted to be used for chrysanthemum shows in the same way that theatrical advertising is placarded. Prospects are consummating of a printing company in this city who are largely engaged in that line of work taking hold of such as a venture of their own, and preparing to supply them in such numbers as may be needed by the various clubs. Lithograph work and printed in four colors is talked of, and it should make the nicest show card going. A reduced size would be adapted for window display. If this project carries out it should be welcome news to all of us.

It is hoped a meeting of the clubs by delegates or otherwise will be gathered together in Toronto in August. Each club's delegates might be authorized and instructed to act regarding the needed printed matter of their coming fall show, and a large amount of business thus be expedited advantageous to the club financially and to the relief of its members and committees in the fall, when other features of the shows demand all of their attention. Let the meeting be arranged. This could no doubt be most easily accomplished by the Toronto club issuing a general invitation to the other clubs to participate in such a meeting, to be held out of S. A. P. session hours.

DANIEL B. LONG.

BUFFALO, N. Y., June 9, 1891.

Long Island Notes.

BY WM. FALCONER

THE YELLOW ASPHODEL has been in bloom for a month or more, but is now becoming ragged because of the large number of seed vessels and withering flowers spread upon the spikes among the perfect blooms. Easily raised from seed and blooms the second year.

LONG-SPURRED COLUMBINES are vastly more beautiful than the short-spurred or no spurred sorts, and strange enough the long-spurred ones are strictly American.

THE LARGE ST. BRUNO'S LILY (*Anthericum Liliastrium*, var. *major*) is a perennial worth having. It has large loose spikes of white fragrant flowers well fitted for cutting or for garden decoration.

OF *SPIRÆA FILIFOLIA* there are two forms, the single and the double; the single is the more vigorous plant in every way and it blooms a day or two ahead of the double one, but for beauty, whiteness and general utility the double one is the best. Both are good hardy herbaceous perennials now coming into bloom.

SALVIA PRATENSIS, a blue flowered hardy perennial species common in old gardens, is now making a great show. It is easy to grow and to raise from seed.

CAT VALERIAN is too showy an old fashioned plant to pass unnoticed. Botanically it is known as *Valeriana officinalis*, horticulturally as garden heliotrope and domestically as a delightful bed for

kitty to roll on. But it is a pretty plant, with now its great mass of pinkish white flowers. It loves moist ground.

CLEMATIS RECTA.—For the next two weeks this grand old perennial will be in generous mood. In good ground the clumps become very large; of course their cymes and the multitude of their fragrant white blossoms are in proportion. Every clump should have a stout stake. But here again, if you will have quality in preference to quantity, get the double flowering variety.

PHYTILIRIUM.—Yes, they are splendid, single and double and all beautiful and all useful and they last well as cut flowers or when left upon the plants.

RED VALERIAN (*Centranthus ruber*), best treated as a biennial. Seedlings of last fall are now in fine bloom. Good enough as a decorative garden plant and to yield a bunch of common flowers, but not good enough for the city market.

FRAXINELLA has come into bloom. Botanically we have known it as *Dictamnus Fraxinella*, but nowadays we are informed that the white flowering form is the species and should be termed *D. albus*. If you can get either one established in your garden you may depend upon having it forever; no, not at all, it doesn't spread; it merely confines itself strictly to the spot where planted.

DORONICUM give us the longest lasting mass of yellow blossoms we have in spring. But they are coarse and of little or no use as cut flowers.

SEMPERVIVUM, commonly known as houseleeks, are very pretty now. If you want them for stock pick out those that are running to flower and give the off sets a chance to grow; and if you are using them in pattern flower bed work pick out and discard all that are running to flower, as blooming kills them, and replace with young plants that won't bloom this year.

DWARF CORNFLOWER (*Centaurea cyaneus nana compacta Victoria*) is in full bloom with me from March onward. It is a perfect little pyramid or ball, dense as an upright speciosa lobelia, about 5 to 6 inches high and full of blue flowers, set close in to the tuft of leaves. It is strikingly neat.

COMMON CORNFLOWERS from last fall's self sown seedlings are in full bloom; spring sowings are not yet in flower.

HELENIUM BOLANDERI is a handsome yellow flowering plant with large showy narrow ray blossoms. It is well worth growing; easily gotten up from seed or by division.

ZINNIA HAAGEANA PUMILA FL. PL. is blooming very prettily in a border here. The old form is a little slender or strawy with age, but this dwarf variety completely erases that fault without in the least detracting from the size, doubleness and profusion of its golden yellow blossoms.

OUR PEONIES are in splendid bloom. First of all came the double flowered tree peonies, then the Japanese single flowered tree ones and the Siberian *P. tenuifolia* single and double, then the old fashioned large double crimson and pink European sorts, followed immediately by the single white, *P. albiflora*, and now we have the great flood of the common herbaceous sorts, single and double, and in color from white to deep crimson.

SWEET ALYSSUM for fragrance. And it has all summer long answered the cry of few pretty flowers that live with us for weeks after the first nip of frost destroys our tender plants.

ANCHUSA CAPENSIS from March sowings is in bloom, pretty, forget-me-not like and 15 inches high. The more vigorous perennial, *A. Italica*, 3 to 5 feet high and forming big branched clumps, are very gay, at the same time rather coarse.

PETUNIA GRANDIFLORA SUPERBISSIMA is the biggest single flowered petunia we have. Bright crimson with open white throats is the prevailing color; there are also nested veined but no striped ones.

CAMPANULA DAHURICA, a perennial with heads of bluish purple flowers, is the best of its race now in bloom with us. But as soon as *C. persicifolia* comes into full flower *C. Dahurica* will lose much of its glory.

DRUMMOED PHLOX.—Self sown seedlings of last fall that had taken shelter among some other plants and got mulched in winter were in bloom as early as the 20th of May. But in open exposed places the fall seedlings seldom survive until spring.

CANTERBURY BELLS.—"At last." About a year ago I told you of a novelty in this line that Henry Cannell is going to give us a couple of years hence. It is a double blue flower with a calycethema "saucer." But Henry didn't have the monopoly, and I am delighted to be able to assure him that I now have a 3 feet high pure white flowered one of the same in bloom and others of other colors last swelling.

POT MARIGOLDS.—I can't help growing a lot; just stick them in here and there wherever there is a vacancy. My! what a difference there is between the big full double orange colored blossoms of the "Orange-King" and the dark hearted semi-doubles of my grandmother's garden. And these Orange-King and Meteors are just too easy to grow the way the old fashioned sorts and they bloom as easily and full. But while we might get along without them in spring I regard them as indispensable in fall, when with sweet alyssum, pansies, mignonette and trimmas, they continue to brighten up our garden till the end of November, or till hard frost comes. But for this purpose they should be sown in July.

FOXGLOVES are opening their showy blossoms and many of the spikes are 5 feet high. Although they act somewhat tender in the open places wherever they scatter themselves among the bushes they repay in vigor and massive spikes the hospitality they receive. In open places we strew some dry leaves or straw litter or evergreen branches over our plants in winter.

THE RHODODENDRONS are in full bloom. They have been blooming more or less since a month and promise to last for a week or two yet. But very dry and warm weather soon drive them past.

OUR DECIDUOUS AZALEAS were never finer than they have been this year. We have had them more or less in bloom since the 10th of May and they will last pretty well through June. The May flowers were much injured by the bumble bees, but now the bees frequent them less hence injure them less than they did last month. Bunches of these azalea blossoms are much liked as cut flowers by private parties.

ORIENTAL POPPIES are in their grandest splendor. Shirley, umbrosus, ranunculus and other small poppies from seedlings last fall are opening nicely, but the spring sowings of the annual sorts will not be in bloom for some time yet. Cut these poppy blossoms early the first morning they are seen with brilliant colors, and flowers you will have, and they will last a couple of days in very good condition.

GROUP OF ORCHIDS AT MR. W. S. KIMBALL'S, ROCHESTER, N. Y.

Wouldn't a few big bunches of them set off your store window pretty nice? Then try them. They cost very little to produce. The flush of Iceland yellow poppies is about over, but early spring raised young plants are beginning to bloom.

AND TRY ESCHSCHOLTZIAS.—When cut they keep very well for a day or two and open lovely. Some rows I sowed outdoors last March are now beginning to bloom.

Group of Orchids.

The illustration is from a recent photograph of plants in the collection of Mr. W. S. Kimball, Rochester, N. Y. His able gardener, Mr. George Savage, writes as follows regarding the plants shown:

"The photograph shows an extra fine

spike of *Dendrobium lituiflorum* Freemanii, with forty flowers on a single erect stem.

"*Cattleya Skinnerii* alba, in the centre of the group, is a beautiful white *Skinnerii*, a very charming and delicate plant.

"Also the free flowering *Dendrobium Jamesianum*, pure white, except lip, which is stained with orange red."

The Hail Storm at Cincinnati June 4.

It was a sad sight that greeted the visitors to the College Hill establishments to view the wholesale destruction of fine ranges of greenhouses. Within a space of five minutes the noble, hard working proprietors and their devoted wives had the work of a lifetime dashed to the

ground. A cessation in the storm brought the remark: "We are safe," but no sooner uttered than the gathered forces returned in treble fury, the end in several cases being total loss, and, worse still, "no insurance." Messrs. Wilson and Corbett lose about 10,000 feet, Henry Corbett, 6,000, both insured; Walter Gray, 12,000; Joseph Linfoot, 5,000, and several others no insurance. It is not so much the loss of glass as the terrific amount of labor and valuable time to get it replaced, besides the additional damage to growing stock.

There are two suggestions worthy of consideration. Walter Gray has one house glazed 18x24, and where other houses are a total loss this one is not injured to half the extent. Again, cannot the Hail Insurance Company fix a rate so as to cover cost of labor in replacing the

glass? Many men here would pay the extra rate.

Upon inquiry the writer found that the sufferers were all church members, but acknowledged they had not attended church in a long time. J. F.

Horticultural Building at the World's Fair.

We present herewith a view of the building which will contain the horticultural exhibits at the World's Columbian Exposition at Chicago in 1893.

The building will be situated immediately south of the entrance to Jackson Park from the Midway Plaisance, and will face east on the lagoon. In front is a flower terrace for outside exhibits. The front of the terrace, with its low parapet borders the water and at its center forms a boat landing. The building is 1,000 feet long, with an extreme width of 286 feet. The plan is a central pavilion with two end pavilions, each connected with the central by front and rear court-forming two interior courts 88x270 feet each. These courts are decorated in color and will be planted with ornamental plants and flowers. The central pavilion is roofed by a crystal dome 187 feet in diameter and 113 feet high. Under this will be exhibited the tallest palms, bamboos and tree ferns. Galleries in each pavilion are designed for cafes, which are surrounded by an arcade on three sides, affording views of the grounds. The exterior of the building is in stucco, tinted, a warm buff color being reserved for the interior and the courts. The appropriation for the building is \$400,000.

Phoenix.

The date palms are among those that have attained considerable prominence in decorative work of late years, and with good reason too, for generally speaking they are of graceful habit and the texture of the leaves being firm gives these plants much endurance, either for indoor decorations or for vases.

They are also of quite easy culture, which is another point in their favor, the chief essentials for rapid growth being brisk heat and sufficient moisture, though from this it should not be understood that strong heat is at all times necessary for their welfare.

The phoenix, like most other trade palms, are propagated by means of imported seeds, which usually germinate satisfactorily when placed in a warm house for six or eight weeks, or sometimes longer if the seed is not quite fresh.

Probably the most widely known of the dozen or so species comprising this genus is *P. dactylifera*, the common date, the fruit of which is so favorably known to hundreds of thousands of the dwellers in the far east (*not down east*, the favorite fruit of that locality being of a different character). In the fruiting size however, *P. dactylifera* would be of little use for our purpose, as at that stage of its development it may be from thirty to sixty feet high or even more, and it is therefore merely as a young plant that we need consider it.

In common with the other members of the genus *P. dactylifera* has pinnate leaves, the pinnae of which are narrow, rather stiff and of grayish green color and stand out almost straight from the midrib. This is decidedly one of the hardiest of the family, and will thrive in a temperature of 50° at night, though naturally making more rapid progress in a warmer house.

P. reclinata is also a handsome species and much more favored for decorating than the preceding, its habit being more graceful, and the leaves are of more attractive color, being glossy dark green. The species in question is also an admirable outdoor palm for summer use, its leaves being very tough. Another good one is *P. sylvestris*, sometimes known as the wild date from the supposition that it was the species from which the cultivated date, *P. dactylifera* was originally derived. *P. sylvestris* is of rather compact growth and in color somewhat glaucous or grayish green, the leaves being very thickly clothed with narrow pinnae, and the latter slightly pendulous. This species also stands exposure well and makes a remarkably pretty specimen in a ten or twelve inch pot.

But the best of the whole genus is *P. rupicola*, now becoming well known and sought for in preference to all others of its class. It has most graceful fronds with long narrow pinnae of dark green color and is of more moderate growth than those above referred to, *P. rupicola* seldom exceeding twenty feet in height. *P. rupicola* is pretty from the time its first character leaf is produced and only increases in grace as it does in stature.

Still another species seen at times and also useful is *P. spinosa*, also known as *P. leonensis*, which has some little resemblance to *P. reclinata* when in a small state, though not quite so desirable as the latter, the leaves being dark green in color and the pinnae somewhat sparse and sharply pointed. As this species attains age it suckers quite freely from the base, and this does not add greatly to its beauty as a specimen.

P. tenuis is also more or less used and makes a rather pretty plant too, being inclined to the dactylifera type, though with a much finer pinnae and a lighter appearance. It is also peculiar in another respect from the fact that its native country is unknown.

A recent addition to the genus, *P. Roebeleni*, may prove to be a very useful one when it becomes more common, but at present I think this species is almost entirely controlled by one European firm and consequently its sphere of usefulness to the decorating florist is somewhat curtailed.

P. Roebeleni is extremely dwarf in habit, being in fact the most dwarf of all the phoenix, and when full grown is only from two to three feet high. The leaves of this interesting little palm are gracefully arched, dark green in color and finely divided into narrow pinnae, somewhat after the fashion of *Cocos Weddelliana*. As a companion plant to the last named *P. Roebeleni* may find a place when produced in sufficient quantity, but we may be allowed to doubt whether the phoenix will prove good enough to supersede the most popular dwarf palm at present in cultivation.

Holmesburg, Pa.

W. H. TAPLIN.

Greenhouse Palms.

Time was when gardeners and others who took an interest in gardening matters in this country, had little regard for elegance and beauty of form in the plants they grew. So much so, that plants which did not produce showy flowers were not much thought of and received little attention. A few of the commoner kinds of ferns were usually to be met with in the plant houses where gardening to any considerable extent was carried out; but as for palms, the most elegant of all plants that will submit to pot culture,

we can well recollect the time when it would have been a difficult matter to have found half-a-dozen in any county, excepting perhaps the few that existed in the limited number of botanic gardens. Little was attempted beyond the cultivation of flowering subjects, and in the arrangement of these in greenhouses and conservatories, one rarely met with any attempt at effective grouping, beyond filling the formal sloping stage, that used to do duty in most plant structures, with plants of equal height, which presented an even unbroken slope, as formal as the roof of the house that enclosed them. There was not much done in the way of decorating dwellings with plants, and that which was attempted was usually of a common-place character.

Now all this is changed. In plant-houses there are generally several kinds that are grown for the effective character of their foliage, or the elegant contour of the plant as a whole. Amongst these, palms play a conspicuous part. As a matter of course, the cool sorts, such as will thrive in a greenhouse, are the most useful, inasmuch as they can be used at all seasons in cool quarters, without suffering in the way that the more tender heat-requiring species do if kept in the winter for a length of time out of season. Of the greenhouse kind the kentias hold the first place. In a small state they are pretty and effective; but it is when the plants get from 4 to 8 or 10 feet high, and begin to show something of their true character, that their elegant habit becomes apparent. There is less difference in the appearance of the four or five kinds usually met with than there is in that of most things which have got a distinctive name. A difference in the size and length of the leaves, and in the length and curve of the individual pinnae, being the only difference existent. *K. Belmoreana* and *K. Fosteriana* are the forms mostly grown, and are enough for ordinary purposes.

One of the best properties these kentias possess is their easy cultivation, and the absence of injury by being kept for any reasonable length of time in a living-room; in fact, if stood continuously near a moderate-sized window, where they will get a fair amount of light, they thrive and maintain themselves in a condition, little, if at all, inferior to that which results when they are kept in a plant-house; only, as might be supposed, their progress is slower. We know of plants that have been kept for four or five years in a room, and which, when first introduced, were not more than 3 feet high, whilst now they are from 6 to 7 feet, and are perfect in the development and color of the leaves.

In the cultivation of these plants, one of the first essentials is to draw the line between cramping the roots too much and over-potting. Of the two evils, the last named is the worse, either when they are grown in a plant house or a living room; for if there is too much soil about the roots, and any deficiency occurs in the drainage, or too much water be given, especially in the winter when the growth is moving slowly, the roots are apt to suffer, and when larger pots than necessary are used for plants that are kept in a house where there is anything more than a greenhouse temperature, it hastens the time when they get too large for the purpose they are required, a condition which is the reverse of desirable. A 12-inch pot is large enough for a specimen 6 or 7 feet high, for with the aid of a little concentrated manure, such as Clay's or Stan-

THE HORTICULTURAL BUILDING FOR THE WORLD'S COLUMBIAN EXPOSITION AT CHICAGO IN 1893

den's, applied to the surface of the soil three or four times during the summer, or manure-water given at intervals, the requisite vigor can be maintained.

As to soil, like most palms, they are not particular. They will thrive in anything from peat of a moderately light fibrous nature to a mixture of half loam and pulverized clay; but some growers prefer yellow loam, with enough sand added to it to enable the water to pass off. The drainage requires to be efficient, and in potting, enough fibrous matter should be placed over the crocks to prevent the soil getting washed down amongst them.

In respect to water kentias require ordinary treatment. The soil must never be allowed to get so dry that the roots cannot absorb as much moisture from it as will compensate for that which is given off from the leaves; at the same time, the plants should not be watered, even in the summer, before the soil is approaching a moderately dry condition. From the time the plants are in 5 or 6-inch pots to their approaching an effective size, where they are required to be got up to this without delay, they do well in a grapery where sufficient space is allowed by not standing them close together. Under the shade of the vines the leaf stalks get a little drawn up, and the whole plants assume more of an erect character, in which condition they have a more elegant appearance, as height, rather than the lateral spread of the leaves, is what in some cases is wanted.

When grown in a dwelling, the plants should be occasionally taken out and well syringed and sponged to free them from dust; this is alike necessary for their appearance as it is for maintaining a healthy condition.

Kentias are now fast taking the place of *Scarforthia elegans*, another beautiful habited palm that a few years back was very much used for room and hall furnishing, but which will not submit to anything like the wear and tear of frequent removal in the way that the harder texture of the leaves of the kentia enables them to. Another drawback to the use of the *scarforthia* is that, if kept for any time in a hall or room where there is less light than it likes, the leaves assume a sickly yellow color, whereas the kentias are indifferent to this, retaining their bright green hue under conditions that would be fatal to the appearance of many plants.—*The Gardeners' Chronicle*.

Trade Exhibits at the Convention.

The Gardeners' and Florists' Club of Toronto, would be glad to hear from those who intend sending trade exhibits to the convention in August, so that the committee appointed to look after that department may have some idea of what arrangements to make in order that they may be displayed to best advantage.

Communications may be addressed to Mr. Thomas Manton, Florist, Eglinton, Ontario, (chairman of committee), or to A. H. Ewing, (secretary), 276 Victoria street, Toronto, Ontario.

AT A RECENT wedding in an eastern city a feature of the decorations was a floral fence with a gate through which entrance to the parlors was obtained. The fence was three feet high and was made up of pink and white carnations and roses on a back ground of ferns.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

OBITUARY.

By the death of Mr. Frederick Schlegel, of Rochester, N. Y., which occurred May 15, many of us have lost a true friend and all who know him personally will regret his untimely departure.

Three days before his death after leaving an electric car and in the act of crossing the street another car came in an opposite direction and struck him, throwing him under the car. He was taken home and although badly bruised and broken his injuries were at first thought not to be fatal, but on the second day the doctors gave but little hope, for his lungs had been punctured by the broken ribs, and they finally had to acknowledge their inability to save his life.

Mr. Schlegel was born in Southern Germany (Baden) in 1832 and came to Rochester when a young man in 1862 and soon after took charge of the greenhouse department at Ellwanger & Barry's in this city, in which position he remained until the latter part of 1867. From that time until 1875 his time and energies were directed to various enterprises, mostly real estate transactions, but his love for plants and flowers induced him to start in the florist business again in the winter of 1875-1876, and ever since he successfully conducted the same with the aid of two of his sons, who will continue in the business. Besides his widow he leaves three sons and three daughters, all grown up, to mourn his unfortunate departure. K.

Chicago.

At the last meeting of the Florist Club Mr. John Thorpe was the guest of the evening. The proper method of growing chrysanthemums for exhibition was a question brought up, and in response to a request Mr. Thorpe favored the members with his views.

He saw no necessity for a rule requiring all plants to be grown to single stems, and believed that as more showy exhibition specimens could be produced by growing two or more plants together in the same pot, it would be well to do so, as the object of the exhibition was to please and interest those who attended it. The main point was to have the rule well defined and to suit the majority. If the majority of the growers believed in single stemmed plants, then make the rule that all on exhibition be grown to single stem, and if they did not, then leave the question open, and let each one follow his own inclinations. Referring to the queries by B. on page 842 of the last issue of the FLORIST, he said that the aim should be to produce plants which combined the largest number of good points—good sized, clean foliated plants, with a good showing of well colored flowers of good size. He did not believe in sacrificing any one of these points to strengthen any of the others.

The question of selection of judges to award the prizes on floral arrangements at the fall exhibition was also brought up and further discussed. The preponderance of opinion as expressed by those present was in favor of adopting the plan pursued last year, namely, the selection of a dozen or more well known lady buyers of flowers, the names to be suggested by those who competed. One objection to the ladies was stated to be that if one of their number who happened to be specially fond of some particular flower should find that flower in one of the arrangements, she would be prejudiced in its favor, regardless of the merits of the

arrangement. But it was admitted that with so large a committee the effect of such personal preferences would be minimized. Another objection was that ladies who belonged to a certain society "clique" would be biased in their judgment by that of the leader of that particular clique. But this is almost entirely avoided by making such provision that the ladies may cast their ballots separately, as they arrive at the hall during a stated length of time, and thus act each on their own individual judgment without meeting the other ladies. One strong point in favor of the lady judges is that they consider their selection a compliment, and at once interest their friends in the show. And their connection with the affair is of decided value in an advertising way, for the newspaper boys at once spread themselves when they learn that ladies from the highest social circles are to act as judges. In view of the light attendance at the meeting it was decided to make the matter the special order for next meeting, when opportunity will be given for further discussion, and a vote will be taken upon the question.

Moses Malsh, who about a month ago started at 115 State street with the avowed intention of making it so unhealthy for the other florists that they would soon be compelled to close their business, just a month ago and then "moseyed" out. A large and varied assortment of placards offering flowers at "cut rates" can now be secured at a bargain.

Tom Rogers has started up again in the basement underneath his old stand on Wabash avenue.

Mr. H. B. Beatty, of the Oakwood Rose Gardens, Oil City, Pennsylvania, has been in Chicago for over a week past, confined to his room by illness. He was at the Sherman House, but in order to insure the quiet necessary to his recovery, Mr. J. D. Reynolds has taken the patient to his home at Riverside, where he is rapidly gaining strength.

Mr. John Thorpe arrived in the city Wednesday last week. He spent the following Sunday at La Salle, Illinois, as the guest of Mr. J. C. Vaughan at his summer home. He left for New York on the 16th.

The work of the body of horticulturists in protesting against Walter S. Maxwell as chief of the horticultural department of the World's Fair, as noted on the first page of last week's issue, was ably supplemented last Friday by a committee from the Seed Trade Association, consisting of Messrs. J. C. Vaughan, of this city, F. T. Emerson, of Omaha, and James Currie, of Milwaukee. They kept hard at work up to the time of the meeting of the local directory, and did yeoman service in the cause.

August Jurgens, of Havelock, was married June 12.

E. E. Parsell, of Lake Forest, is building three greenhouses 20x100. They will be devoted to cut flowers.

Trade last week was active. Commencement exercises at the various colleges and seats of learning have already created a brisk demand for flowers. Outdoor stuff of all kinds is coming in freely. Jacques and other roses from the open ground are being received in large quantities. Jacques particularly are very fine this season. Sweet peas are becoming very plentiful. These flowers are still grown under glass. The out-of-door crop is not expected for three or four weeks yet. The oriental poppy is here in all its glory, a flower that sells readily in

our market. Of peonies there is a glut. The demand for this flower is falling off, and prices are way down. With few exceptions the rose stock under glass is very poor. There is hardly a rose that isn't sadly mildewed.

The banquet given by the World's Fair management to the diplomatic corps visiting the World's Fair city last Saturday at the Auditorium was a swell affair. Thousands of roses were used in this decoration. Several large weddings and receptions are on for this week, notably the reception of the Philadelphia Clover Club at Kinsley's on the 18th.

Some time since Mr. Charles Reissig leased his greenhouses at Riverside to Mr. M. F. Kyle. He has now disposed of his city store to Mr. P. J. Hauswirth, who has been with him for many years, and will retire entirely from the business July 1. Mr. Reissig is now 73 years of age. He was one of the pioneer florists in Chicago and has been actively engaged in the business here for over a quarter of a century.

New York.

Dards had an elaborate order for the West Point cadets at the Murray Hill hotel Friday. The dining room and four adjoining rooms were handsomely decorated. There were two tables, seating sixty at each. A large circle of palms surrounded each table; in the center of one there was a circle ten feet in diameter, in which was mounted a large cannon made of red carnations festooned with white roses. From the mouth of the cannon shone three electric lights of the national colors. The second table was a duplicate of the first, except that the center piece was a field cannon made of white carnations festooned with small American Beauties and hybrids, surrounded by small palms and ferns.

Mr. Dards had two other large orders at the Murray Hill last week, one for the wedding of Miss Lockwood and the other given by the Princeton College Base Ball Club, the entire decoration being yellow, the club's colors.

Fleishman had the decoration for the wedding of Miss Anthon. The chief feature was the decoration of the ceilings and side walls, which were entirely covered with bougainvillea. In the parlor, where the wedding ceremony took place, Mr. Fleishman made an alcove ten feet high of adiantum ferns in pots, over which was a canopy made of smilax and bougainvillea, which had a beautiful effect. The other rooms were profusely decorated with spring flowers, such as white peonies, sweet peas, and corn-flowers.

The Florist Club held a very lively meeting last Monday evening. Mr. Dean, chairman of the committee on the revision of the by-laws, made his report, and after an animated discussion on each section they were adopted as corrected. At this meeting officers were to be nominated for the ensuing year, but it was decided to have the present officers continue until January 1, when the new by-laws would go into effect. It was also decided to make an assessment of \$1.00 on each member to make up the losses caused by the recent show. The secretary made his report, showing that there were 106 members in good standing at the present time.

At the Bowling Club Monday, Mr. Theodore Roehrs again captured the medal with the score of 176. This is the sixth time Mr. Roehrs has won it, so it is impossible for anyone to get it from him.

FLAT BASKET

We received a call during the week from Mr. G. Berterman, of Indianapolis, and Mr. Chas. Young, of C. Young Sons Co., St. Louis, Mo. Mr. W. L. Trumppove, an old New York boy, who has been in Pittsburgh for three years with A. M. & J. B. Murdoch, also visited us during the week. Mr. T. is starting in business for himself at 38 5th avenue, Pittsburg, and has the good wishes of all his friends for his success in his new departure.

Charles W. Farley, who for many years was connected with Thorley and of late with Scallen, died Saturday, June 6, of consumption. Mr. Farley was considered one of the best artists in the business and as a floral decorator could not be excelled.

Trade during the week has been very quiet. The quality of the flowers coming in has been very poor, and the average prices obtained very low.

JOHN YOUNG.

Flat Basket.

The illustration shows a very pretty way to send flowers, and especially so if they are fine, long stemmed roses, that they may be put in water as soon as they are received.

The dark roses are specimens of that magnificent rose, the Ulrich Brunner, whose admirers are not far wrong when they say that for winter forcing it is the finest rose in cultivation. The light roses are Mrs. John Laing and Mme. Gabriel Luizet, who are rivals worthy of each other. Those devoted to the Laing contend that it is more symmetrical when it opens, and that it has not the thorns of the Luizet. But there is a certain grace

about the latter when it does unfold its petals that the Laing does not possess and, too, under certain conditions it has a fire that is peculiarly its own.

Speaking of roses in this light makes me think of other beautiful ones. Who has seen the Anna de Diesbach in her greatest beauty, and felt that she did not deserve the honor of being called "the glory of Paris?" Baroness Rothschild: I wish that all titles were as worthily bestowed and maintained with the same dignity. Captain Christy: I should like to make him a general. General Jacqueminot should be made a field marshal. Paul Neron is big enough to know better. Her Majesty "The Queen, God Bless Her." I guess is more admired in England than here. American Beauty: "When you're good you're very, very good, and when you're bad you're horrid." Marechal Niel is always welcome. Souvenir de Wootton, named after the home of Mr. George W. Childs, one of the finest in the United States, situated at Bryn Mawr, Pennsylvania, about ten miles from Philadelphia. Mr. Childs is president of the Pennsylvania Horticultural Society. His gardens and plants are presided over by Mr. John Hughes. La France: I think the popularity of this beautiful rose is on the wane. Madame Hoste and Duchess of Albany have so recently made their debut that it is hardly fair to criticize, both having many good qualities. The latter, however, is very fine with us now, holding its shape and color, and lasting much better during these warm days than the old favorite, La France.

The Bon Silene, Isabella Sprunt, Safrano and Cornelia Cook we remember with

great pleasure, but we have something very much better in their places, such as Papa Gontier, Madame Hoste, Sunset, and Bride. Speaking of the Bride reminds us of her sister, Catherine Mermet, who deserves all the praise that is bestowed upon her. Still, she will have to look to her laurels when her younger sister, Waban, makes her debut. I have seen her, and assure you she is very beautiful. Niphetos, Souvenir d'un Ami, and Souvenir de la Malmaison, I wish we might see more of, but, like the grand old Marechal Niel, they are put on the shelf by many, and marked unprofitable. The same is said of moss roses. Somebody is to blame for this; either the grower has not the courage to grow or the dealer brains enough to sell this beautiful rose. If properly handled there should be a good demand for these roses.

We started by saying something about arranging a basket of flowers, but got off the track.

H. H. BATTLES.

The American Pomological Society will hold its twenty-third session at Washington, D. C., September 22 to 25 next. The official programme will be issued at an early date.

When remitting small amounts by check, please add ten cents to the amount of the check to pay the exchange on same.

November —, Germantown, Pa.—Chrysanthemum show Germantown Hort. Society. Thos. E. Meehan, Sec'y.

November —, New Haven, Conn.—Chrysanthemum show New Haven Chrysanthemum Club.

IN THIS issue we make an addition to our list of coming exhibitions that will, we believe, very materially enhance its value. To the data already given we have added the name and address of the secretary of each organization giving an exhibition, thus making communication with each one as easy as possible. We anticipate that these addresses will be found a great convenience by all interested.

A copy of the premium list for the fourth annual chrysanthemum exhibition of the New Bedford Gardeners' and Florists' Club, to be held November 10 to 12 next, has been received. Copies may be had on application to the secretary, Mr. Geo. C. Bliss, 34 Arnold street, New Bedford, Mass.

A. T.—The poppy of which you send a flower is *Papaver orientalis*. The one you send is the type and comes true from seed. Some forms other than the type have been disseminated and in order to hold them true they must be propagated by division.

THE NOMINATION of Mr. Walter S. Maxwell as Chief of the Hort. Bureau of the World's Fair has been rejected by the Local Board of Directors. Director General Davis then placed in nomination Gen. N. P. Chipman, of California, saying that this position had been promised to that state. The nomination was immediately confirmed. Gen'l Chipman lacks the confirmation of the National Board of Control and it is said a fight will be made on him in that body. The determined stand made by the horticulturists of America has won for them this fight. The local board made up of business men of the highest character and patriotism have said to the Director General, the rights of the horticulturists shall be recognized and political "pull" is not the sole requisite for the horticultural department. Gen'l Chipman has the endorsement of the well known San Jose nurseryman, Mr. John Rock. We trust the organization of this department will soon be made. At least six months' valuable time has been unnecessarily lost.

Since writing the above General Chipman has been rejected by the National Board of Control. The name of Commissioner Forsyth has been suggested. He is the Californian who originally proposed Mr. Maxwell, and if chosen would probably be the head of the department only in name. We do not believe the local board would endorse him.

IN THIS ISSUE Mr. Matthews resumes his articles on color contrasts in the arrangement of flowers. We trust that none of our readers will fail to profit by the valuable information they contain. We all need instruction in this line, and there is none more competent to teach us than our correspondent.

IN THE advertisement of Jos. E. Bon-sall on page 850 of last issue a bad figure 1 did not show up properly and made Mr. B. offer his smilax at 15 instead of 15 cents. He writes that this misnotation is causing him some little trouble. We trust this explanation will put matters right.

YOU CAN give the AMERICAN FLORIST your fullest support by confining your orders to those who advertise in its columns, and when ordering mentioning the fact that you were induced to order by the adv. in the FLORIST.

THE SALES of flowers for decoration day were this year generally much larger than ever before. Reports from all sections indicate universal satisfaction with decoration day trade.

THE wholesale trade in greenhouse stock about New York this season is reported as lighter than usual.

WHEN sending us small amounts in postage stamps, please select those of the 2-cent denomination.

Watering Chrysanthemums.

Is it advisable to sprinkle chrysanthemums in the middle of the day, when the sun is hot, whether the plants are grown under glass or out of doors?

A SUBSCRIBER.

[When plants are dry, then is the time to water them, sun or no sun. Often times though plants flag or wilt from too much water. Remember that it is always difficult to diagnose a case without seeing the patient.—J. T.]

The Seed Trade.

SEED TRADE ASSOCIATION.

F. BARTELDSE, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., June, 1892.

The Convention.

The ninth annual session of the American Seed Trade Association, which convened at the Burnet House in Cincinnati last week was more fully representative of all sections and branches of the trade than any of recent years. Ten new members were elected. Several matters of importance were considered and disposed of satisfactorily. A strong board of officers was chosen for the ensuing year and after a delightful ride through the suburbs and Spring Grove cemetery the party, 75 in number, dined at Kennedy Heights. Messrs. McCullough, Critchfield and Parvins Sons as a local committee were entitled to much credit.

In addition to those named last week the following were present: J. G. Peppard, Kansas City; W. A. Heath, with A. Dickinson & Co., Chicago; E. W. Burt and F. Claire, Philadelphia; W. H. Marcon, Sec'y Steele Bros. Co., Toronto; F. A. Stecher, Rochester.

Officers for the ensuing year were elected as follows: F. Barteldse, Pres.; Z. De Forest, Vice-Pres.; E. B. Clark, 2nd Vice-Pres.; A. L. Don, Sec'y and Treas.; Frank T. Emerson, Ass't Sec'y; Executive Committee—Robert George, J. E. Willard, S. F. Leonard, D. I. Bushnell; Albertus N. Clark.

Hartford, Conn., is the next place of meeting.

Report of Committee on Fraudulent Importations.

Your committee believe the following facts exist:

1st. That table beet seed is imported as mangrel wurzel or as sugar beet free of duty.

2nd. That cauliflower and other valuable seeds are invoiced under fictitious names at lower prices than their actual cost.

3rd. That cauliflower and other expensive seeds subject to duty are received through the mails free.

4th. We believe the practice exists with some foreign houses of executing duplicate sets of invoices with intent to evade just legal duties.

We recommend that the Secretary of the Treasury be requested to instruct the proper officers at all ports of entry to draw from all seed importations whether free or dutiable such samples as they may deem best for test at the nearest available Government Experiment Station.

Also that your committee be authorized to consult with the Secretary of the Treasury or other government officers on the subject of the importation of seeds by mail to evade duty or other fraudulent practices and take such action as they may deem best and practical.

There has also grown up a system of buying seeds on contract from foreign growers for delivery at a future date, on which duty is paid at contract prices in lieu of market price at time of shipment as is required by the United States statutes.

We recommend that the attention of the Secretary of the Treasury be called to this fact and he be asked that reappraisal be made in accordance with the law in such manner as may be acceptable to the department and just to all con-

cerned and we pledge the assistance and support of The American Seed Trade Association to this end.

Signed:

WILLIAM MEGGAT, }
W. P. STOKES, } Committee.
E. V. HALLOCK, }

This very important report with recommendations was unanimously adopted and constitutes a record of which the association may well be proud.

Mr. W. ATLEE BURPEE is in Spain.

MAJ. CHAS. P. BRASLAN is in California.

Mr. GEO. S. HASKELL is at Hot Springs, Ark.

Mr. C. L. ALLEN, with Mr. F. E. McAllister, has returned from Europe.

Mr. CHAS. HENDERSON and Mr. A. M. Kirby sailed for Europe about June 1.

Mr. J. W. ELDERING, import agent, has located at 78 Barclay street, New York.

THE FIRM NAME of A. D. COWAN & Co. will be changed to Weber & Son about July 5.

Mr. HENRY M. STANLEY will write three articles for the *Mayflower* on the flowers of Africa.

MR. ROBERT GEORGE thinks very highly of the Gold Coin sweet corn—for tinner purposes.

The long white summer radish known as Chinese and as Celestial is having a large sale.

MR. HARRIS, for years with J. M. Thorburn & Co., will retire from business and take up his residence in England.

R. W. CLUCAS, lately with Peter Henderson & Co., has accepted a position with Pitcher & Manda as manager of their seed department.

THE SEEDSMEN'S LEAGUE will hold their annual meeting next month. Mr. Oliver Landreth is president and Mr. M. B. Keeney secretary. Members interested should make a note of it.

MR. B. E. BEEMER, who has been foreman and general manager for Mr. S. W. Robbins, of Wethersfield, Conn., for the past six years, is leaving him to take a similar position with Mr. J. G. Batterson, Hartford, Conn.

Buffalo.

Wm. Scott shows a goodly collection of orchids in his houses, numbering some 500 plants. He has some gloxinias coming on that are very fine.

The local supply of indoor roses is on the wane decidedly and quality failing. Carnations have been in over-supply since Decoration Day, the buyers having matters their own way.

The bedding, box and vase trade in plants this spring bids fair to eclipse all past records. The heaviest growers are now buying up odd lots and all the good stock will be wanted, the space devoted to bedding stuff scarcely being increased in proportion to the growth of the city and its population.

As the last meeting of the Florist Club, the secretary was directed to suggest to the Toronto Club the propriety of the latter extending an invitation for a meeting of the clubs at the time of the convention, as has been suggested in these columns. L. B. D.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

News Notes.

ROCHESTER, N. Y.—Mr. J. B. Keller will start on an European trip next week.

SALEM, O.—Joseph E. Bonsall is now completing five new houses, each 16x120, all to be devoted to the growth of smilax.

MILWAUKEE.—Mr. G. Volk will start from New York on the 17th inst., on a two months' pleasure trip to Europe.

DECONOMOW, Wis.—The greenhouses of Herman Buechler were badly broken up by hail on the 3rd of June. Mr. Buechler wisely had insured his glass in the Florists' Hail Association and he will be able to replace his glass without drawing upon his spring earnings.

KANSAS CITY, Mo.—To the Coates House has been added a conservatory and floral store building 40 x 150 feet, which has been leased to Probst Bros. Floral Co. for 10 years on favorable terms. This when completed will make one of the most attractive sales and show rooms in the country and this enterprising firm is to be congratulated upon securing so favorable a business location.

PATERSON, N. J.—The young carnation stock in open ground is looking well and making rapid growth. In fact considering that we were very late in planting and the season generally backward their present advanced condition is somewhat remarkable, but the weather has been very favorable and rain coming about right every time has caused a steady growth from the start. We are now stopping many the second time. I think on the whole the prospects were never better at this time of the year.

WHERE can I obtain the seed of "bedding or tufted pansies"? M.

ADDRESS:

AMERICAN FLORIST CO.

54 La Salle Street, CHICAGO.

When writing to any of the advertisers on this page please mention the AMERICAN FLORIST.

Cypripedium Lathamianum.

This beautiful hybrid is now fast rising in popular favor. It originated from C. Spicerianum crossed with C. villosum, and partakes largely of the character of both parents. The upper sepal is white, with a dark claret-purple midrib, suffused with purple on each side of this and greenish yellow at the base, showing the influence of the seed parent. The midrib of the petals is also dark purple, and they are otherwise yellow, suffused with brown on the upper longitudinal half, and more or less undulated on the upper edge. The lip resembles C. villosum in form, but is paler in hue. The leaves are similar to those of C. Spicerianum in form, but are of a bright green and almost devoid of the blackish purple spots underneath. A batch of seedlings was raised by Mr. W. B. Latham, of the Birmingham Botanic Garden, and several of them which we have seen differ considerably in the details as to color. Now that the hybrid has had time to establish itself, it shows plenty of evidence of being a robust and strong-growing subject with flowers of great beauty.—*Gardening World*.

Lamborn Carnation.

I send by express this morning a bunch of Lamborn carnation flowers. I have been for some time past gathering on an average of a thousand a day of just such as those now sent. I notice one writer says this variety has a tendency to burst and tip on one side, a tendency never shown to any considerable extent with me. The more I know of this variety the better I like it.

CHITTY.

[The flowers sent were certainly most excellent for the season.—Ed.]

PAINTING WOOD.—It is found that in painting wood one coat takes 20 lbs. of lead and four gallons of oil per 100 square yards; the second coat 40 lbs. of lead and four gallons of oil; and the third the same as the second, say, 100 lbs. of lead and sixteen gallons of oil per 100 square yards for the three coats.—*The Gardening World*.

BATING THE SLUGS OR SNAILS.—A very efficacious means of getting rid of slugs, consists in serving them with beer in terrines (earthenware pans or flats) filled almost to the brim, and sunk in the tan, sand, soil, or ashes. These insects are very fond of that beverage, and it only remains for to destroy them.—*Bulletin d'Arboriculture, &c.*

When writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

The Cultivation of Mushrooms.

Wholesale Catalogue on application.
Mention American Florist.

PANSIES.

PANSIES THAT ARE UP. No need to worry over getting the seed to come up, it is up and ready to plant when I send them.

It is not only the plants that are up, the strain is up also; up to, and a goodly number of my customers say, above any strain in the market. The price is down, considering the quality of the strain, seed as good would cost you about as much per 1000 plants. My price is \$5.00 per 1000, or in lots of 2,500 and over, \$4.50 per 1000.

SEND FOR LIST AND SHORT PAPER ON CULTURE.

PLANTS READY AUGUST 20th TO DECEMBER 1st.

SMILAX.

Plants ready July 1st and later. These will be nice and stocky, and ready to go right ahead. There is some 40,000 here; let me have a chance to fill your order.

Send 10 cents for samples and get my prices before ordering elsewhere.

ABOUT

PROPAGATION

THE RURAL PUBLISHING COMPANY,

Times Building, NEW YORK.

THE NURSERY BOOK, by L. H. Bailey, assisted by noted propagators. Describes best methods of propagating over 2000 Varieties of cultivated plants. Nearly 100 Illustrations. Price, Cloth, \$1.00; Paper, 60 cents.

HALEISSUS. FOR FALL DELIVERY 1891.

My Special Trade offer of all the leading kinds may be had on application. I have an **IMMENSE STOCK**, probably the **LARGEST IN THE WORLD**. All the leading popular varieties, especially the **MARKET** kinds, to which I pay special attention.

My stock of **DOUBLE DAFFODILS** is remarkably fine, and is recognized by both the American and European trade as being one of the **BEST STOCKS IN THE MARKET**—all of the true deep yellow old English variety, and not the dirty green kind which has been foisted on the market the last few years, and which is of no use to anyone either for forcing or cutting. To ensure this stock you **MUST ORDER EARLY**, as many late orders I was unable to fill last fall, owing to the increasing demand for this valuable stock. **GOLDEN SEUR, OBYALLIAN, RUGLOBUS, MAJOR, PRINCEPS, MAXIMUS**, and many of the best yellow Trumpets I can offer upon very advantageous terms. All guaranteed true and carefully grown. **SEVERAL ACRES** of Early White, Late White, and Double White **Forticus**. My stocks of these are enormous, and I can fill orders to any extent and at very low rates.

Of the newer varieties, I grow only the best, and these in large breadths, and can offer **HORSFIELDI, EMPEROR, EMPRESS, SIR WATKIN, BICOLOR, GRANDIS**, and all the best of the two colored Trumpet varieties, in fact I can offer every good variety that may be considered worthy of cultivation. Also all the best varieties of the **INCOMPARABILIS, LEEDSI, and NELSONI** groups; many of which are of undoubted merit, both for cutting and general decoration. My list also contains many other Miscellaneous **Flubs**, and before placing your orders you should see my New Catalogue. The stocks are true, and thoroughly well graded; prices low, and will compare favorably with any English or Continental house.

In addition to what will be found a select list of **LILIES, IRIS AND PEONIES, PYRETHRUMS, BEGONIAS**, and a most unique collection of **HARDY PERENNIALS**, including all the best in cultivation and many other plants not offered by any other house. It also contains a full description of the **NEW PINK, HER MAJESTY**, the greatest novelty of the season, and which I purpose distributing for the first time during the Fall of 1891.

THOMAS S. WARE,

HALE FARM NURSERIES,

TOTTENHAM, LONDON, ENGLAND.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL INSECTICIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleaning purposes—Half-a-Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-pint of the Fir-Tree Oil to two or four gallons of water, or two or three table-spoonfuls to the pint.

For Red Spider and Caterpillar—Half-a-pint of the Fir-Tree Oil to two gallons of water, or three table-spoonfuls to the pint.

For Mealy Bug, Brown or White Scale—Half-a-Pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoonfuls to the pint.

For Mildew and Blight on Fruit or Foliage—Half-a-pint of the Fir-Tree Oil to a gallon of water, or six table-spoonfuls to the pint.

Used with warm water it is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied in Wind, Tin or Pot Vessels—galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ring-worm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

Sold in Bottles and Tins.

Manufacturer—E. GRIFFITHS HUGHES,

MANCHESTER, ENGLAND.

SOLD BY ALL SEEDSMEN.

EXCELSIOR STANDARD FLOWER POTS,

With Patent Ventilated and Perfect Drainage Bottom.

With Patent Ventilated and Perfect Drainage Bottom. We beg leave to call your attention to our **EXCELSIOR STANDARD POTS**. You cannot well afford to be without them, as they are especially adapted for growing **Chrysanthemums** and all valuable plants.

FIRST CLASS CERTIFICATE OF MERIT AWARDED WHEREVER SHOWN.

We still carry in stock a full line of the regular "STANDARD" POTS.

When writing for price list state sizes and quantity wanted.

Price List sent on application to

THE WHILDIN POTTERY CO., 713 & 715 WHARTON STREET, Philadelphia, Pa.

STANDARD FLOWER POTS

We have the following large **Hand-Made Flower Pots** slightly damaged, that we will sell in one lot at a low price, to make room for perfect goods:

150.....12-inch.	40.....18-inch.
50.....14-inch.	30.....20-inch.
50.....15-inch.	20.....22-inch.
75.....16-inch.	25.....24-inch.

A. H. HEWS & CO., CAMBRIDGE, MASS.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/2-inch.....	3,000	250 lbs.
2 1/4.....	2,400	250 "
2 3/4.....	1,750	250 "
3.....	1,450	250 "
3 1/2.....	1,250	300 "
3 3/4.....	800	300 "
4.....	600	300 "

It will be seen at a glance, that our pots are one-third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **SEND FOR PRICES.**

SIPPLE, DOPFFEL & CO., Syracuse, N. Y.

Washington.

The Florist's Clubs of Washington and Baltimore have arranged for their second annual joint picnic to take place at Bay Ridge, on the Chesapeake Bay, six miles south of Annapolis and about equal distance from the two cities. This is a capital idea, as the fraternization of the florists in the two cities cannot fail to beneficially affect both organizations. The place is beautifully located on bluffs similar to those of Milwaukee, alike accessible by steamer and rail, while its groves and inland lakes, its electric railway circuit, gravity road, riding park and immense pavilion render it more than ordinarily attractive. Guests are to be liberally supplied with flowers, in fact, free as air and water, it says on the programme. The 7th of July is the day the affair is to come off, and should any of your readers come this way about that time they will be heartily welcomed and can be assured of having a real good time.

Hale displays in his spacious window an immense oblong floral shield made for the Columbia University law class '01 commencement, the lettering being illuminated by electric lights, and some other novelties in design introduced which attract much attention. Z.

Gasoline for Fuel.

If any reader of the FLORIST has used gasoline for fuel in heating greenhouses, will he please describe the method employed, giving the size and number of burners and quantity of gasoline used by each burner per week? E. W. S.

THE LATEST newspaper statement concerning the chief of the horticultural department is that in the event of the failure of the local board of directors to confirm Mr. Forsyth no further nomination will be made from California. Another statement is made that the horticultural department will be annexed to the agricultural bureau.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

Color Arrangements for Wedding Decorations.

There is to be a wedding, and we are all on tiptoe with interest and glad sympathy. We are in the very month for weddings!

June with its roses—June
The gladdest month of our capricious year,
With its thick foliage and its sunlight clear!

We associate everything that is bright and glad and beautiful with the wedding—or, better, with the bride! She shall have flowers in plenty, banks and bowers, and her pathway must be strewn with them! But first, let us see what we can do about using the flowers in the best way, and arranging them so they shall produce a delicate and dainty color effect. White flowers we shall use in plenty, but even these have their color effects, and a glance at The Bride rose shows us at once the presence of some yellow! Then we must be careful that this lovely rose shall not be injured by any pure white flowers coming too near. And when we employ colored flowers we must be particular in our choice, and use dainty and delicate colors. There are roses whose petals are tipped with blushes, these were made for us to use; for instance, the Madame de Watteville and Madame Cusin. Then we have blushing pinks and rosy paeonies, dainty sweet peas and rose-tipped pond lilies, delicate Mermet roses and luxurious La France roses, in fact, there are all the flowers we wish for ranging through the pink tones, right at our elbows.

But we are running on too fast. First let us start with some single idea, which shall be at once simple and beautiful. We should choose between some delicate symphonies of color. Let it be a symphony in white and rose, or cream and gold, or pink alone or white and pale yellow. Here we have some good starting points, besides those flowers mentioned above; we have daisies and buttercups, (I wish the florists would learn to love these beautiful wild flowers as the poets have), golden coreopsis, yellow centaurea, the iris, Maréchal Niel and Perle roses, yellow nasturtiums, pansies, and a host of other dainty yellow favorites, which only need our artistic touch to form themselves into bowers and festoons of gold and silver.

We have spoken a while ago of set emblematic forms into which flowers are crowded "en masse;" let us consider the matter more fully now, especially with reference to wedding decorations. Emblems are perfectly right and good in their place, but I think we need some sweeping reforms in their style and use. Those wire framed bells, crosses, pillows, lovers' knots, and such like things can certainly be well replaced by something nearer to the genuine article. By all means use the cross, the bell, the anchor, the lover's

knot, and the gateway! But use the real thing as nearly as possible, and turn it into floral decoration. Tie your true lover's knot tight, but with real *hempen rope*, gild it, silver it with bronze paint if you wish, and twine it lovingly with Brides or Mermet, but don't make it up entirely of flowers. Use the basket, fill it with roses, (of one kind, if possible), make a rustic gate, twine it with daisies, gild your cross, hang on it your white roses, cover the altar cloth with flowers, with even *loose rose leaves* for the sake of color effect, but do not try to make cloth out of roses, rope out of carnations, bells out of daisies, and wooden gates out of a mass of conglomerate blooms! The very words printed out in cold type, "Silver Bells," "Silver Lamps," suggests a ring and silvery gleam which flowers in such shapes are doomed to convey. The florist ought to be supplied with cheap and good metal bells and lamps, say in aluminum, made especially for him to use and decorate. A pretty hanging lamp, however plain, in silver, lighted and smothered in not too many Mermet or Niphetos roses, which may be garlanded and allowed to hang down a space below the lamp, simply *must* look pretty. A silver bell, whose metal is perforated to receive the constructing threads of its floral decoration, if half covered with flowers, must have more of the "true ring" to it than a clumsy, solid mass of carnations, which we guess was intended to look like a bell.

Now we come to our color effects. We may always use our yellow and white flowers, mixed together or grouped in golden or white masses, not forgetting the green foliage. Buttercups are rich, with an absolutely pure golden color; burnished gold, too. Cannot we use them often where we do? Make a golden gate for the bride to pass through; leave only enough of the *real* rustic woodwork in sight to allow the usher to handle it with confidence and faith in its reality and security. Tie your cream color and gold color ribbon to the latch. Tie your posts with a profusion of white flowers, and you cannot fail of success in color effect. Change the scheme of color to pink and white, if you please, but be sure your *pink* color is only a suggestion—a blush! And allow the white to be dominant. If the bridesmaids are clad in rose color, do not forget the green leaves and the ribbon for their pink bouquets. Use as far as the law will allow it the Watteville rose, its dainty blush is a treasure for the florist in his wedding decoration work. If there is a chance to use some pans of water on the floor to hold white or pink pond lilies, seize it, and bank the pan edges with moss and little flowers; tie your lilies, plenty of them, with a natural pad or two here and there, lie placidly on the surface of the water! Use your pans in the room corners, where you can

trail or otherwise arrange your green decorations high up behind. There is plenty of spirea to use for banks or borders, and we have also lilies in plenty which can be grouped in graceful masses where we have need of some good decoration lines on the perpendicular. Color we need and must have; an all white effect is monotonous. Pink carnations will come to the rescue now, the paler they are the better, mass them where and how you please, but do not pack them; allow no pure white flowers to come near them, but choose rather the cream or yellowish white blooms for their companionship. Supposing that we have an arbor effect at the end of the room where the happy couple are to stand, let us endeavor to concentrate our color at a point central in the design and gradually work outward to white alone.

Garlands of flowers of quite white at one end and gradually running into a decided pink at the other will produce a charming effect when used in concentrating lines. There are splendid opportunities for pink and white color effects in the use of the various types of peonies and rhododendrons; whenever we find a big vase let us use it with these showy flowers in making up a good background. Be careful about the pink color and if there is any approaching the purple in tone let it go or else isolate it in some forgotten corner.

And let us stick closely to our idea of a symphony of color, even use light, in tone with our color effects, pink or yellow or white, as the case requires; nothing is prettier than this subdued and color tinged light. We will consider later some specific pink combinations, and the effect of light on flowers of this color.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XXIX.

DUTIES OF AN EXECUTOR.

So old Miss Bloomfield is dead, is she and has named you one of her executors? Why, I wasn't aware that she was anything more than one of your customers.

Strange clause in the will is there? Let me hear what it is. "Five hundred dollars to be expended by my executors in beautifying my burial plot with an arbor vine hedge, shade trees and flowering shrubs."

Do I think such a clause will stand? Most assuredly, and I think the old lady made a wise selection in naming you as one of her executors, for she had the satisfaction of knowing that the matter would be attended to properly.

Like to know something about your duties would you? Well, I've no objection to talking the matter over after you have finished rattling those flower pots.

The office of executor is not one likely to afford you any very great satisfaction, for no matter what you do some one will be sure to find fault. However, this is a small estate and you will be able to execute the trust without much difficulty, particularly as the other executor is her lawyer and he will attend to the routine duties, but that fact will not relieve you from responsibility.

No doubt you were chosen for the reason that the testatrix wanted to make sure of having her burial plot beautified according to her directions and she had often conversed with you about it. Old people often set their minds so firmly upon some small matter of this kind that it assumes great importance in their eyes.

The first thing to be done with a will is to present it to the proper officer for probate. That is proof and acceptance as the last will and testament of the deceased. Upon such presentation citations will be issued to the interested parties to attend on a designated day and file their objections if they have any. If none are filed it goes to probate and you receive a certificate setting forth that you are one of the executors. But before this can be done you must qualify. That is, accept the trust in writing. You may or may not accept; it is not obligatory upon you.

As a general rule executors can not be compelled to give any bonds. It is to be supposed that the testator reposed perfect confidence in you upon appointing you.

You must not attempt to do any act in your capacity of executor until the will has been probated. But there is usually one exception to this: You may pay funeral expenses without waiting for the probate.

The next thing after proving your will is to ascertain how much personal property the deceased left. This is done by means of appraisers, two or more officers appointed by the probate judge, who set a valuation opposite each item.

You ask: What about the real estate? An executor has nothing to do with real estate, unless he is charged to turn it into money and distribute it. Of course there may not be personal property enough to pay the debts of deceased and in that case there must be a sale of real estate to pay them. Well we will suppose your inventory has been made. Now you know exactly what property you have to account for. True some of the bonds, corporate shares, notes of hand, due bills, chattel mortgages or other evidences of debt may depreciate in value through no fault of yours. You are only to be held responsible for actual returns, but you must have a voucher for every item you expend, except possibly small current expenses may be set forth without vouchers. In some states every item of \$20 and above must have a voucher.

An executor must regard all debts due the deceased in the same light that he would if they were his own and he must proceed to reduce them to cash. But there is one difference: He must not asin his own business accept less than the face of the note, bill, bond, etc. without the permission of the court first obtained.

The moment cash to any amount comes into your hands you should at once have practicable proceed to put it where it will draw interest, but this cannot always be done.

After six months have elapsed it is customary to advertise for claims against the estate and you may exact that each creditor shall swear to the exactness of the account presented. A careful executor never pays any accounts except funeral expenses, probate fees and possibly physicians' charges at the last illness, until he has advertised for six months and knows exactly what his estate owes.

Some debts must be paid in full, no matter how the general indebtedness may suffer. For instance, debts due to the United States, to the State, for taxes or what not. Then you must, take up any preferred liens, such as have a right to foreclose. All liens are to be paid according to priority in point of time. You will need the services of an honest lawyer in a matter of this kind. Finally you will be faced by the general indebtedness of the deceased. If there be

money enough all must be paid, if not then you must pay *pro rata*.

In making up an inventory, it is customary to omit all heirlooms, such as family pictures, medals, trophies, etc. These may not be sold to pay the debts of deceased.

It is always dangerous to make an advance to a legatee, unless you are certain that the debts will not foot up more than the assets. In case of making an advance, by which I mean pay a bequest before the year or year and a half is up, it is the usual thing to deduct a rebate of interest.

Bear in mind that an executor has no right to make a promissory note, go on a bond or incur any liability as executor. If he does, he simply exceeds his powers and becomes personally liable.

Upon settling up the estate you are entitled to a discharge. The court usually appoints someone to go over your accounts and make a report. The final decree will authorize the payment of all your charges together with your commission for handling the funds. This commission is small. The duties of an executor are largely a labor of love, especially in small estates.

From beginning to end make a practice of keeping debit and credit accounts. All legatees are proverbially hard to please, but well kept accounts can't be spoiled.

UNCLE BLACKSTONE.

The Allegheny Park Conservatories.

We present in this issue two groups of views in the conservatories of the park at Allegheny City, Pa., where the genial Wm. Hamilton is superintendent. We are indebted to Mr. John Thorpe for the photographs from which the views are engraved, and also for the following description:

"The conservatories were donated to the Allegheny City Park by W. H. Phipps Jr. Their construction cost \$60,000. There are frequently over 4,000 visitors on Sunday afternoons, and these visits are one of the greatest features of the Alleghenian's life."

"In group number 1 the view at the upper left hand corner shows a group of palms. *Areca lutescens*, a plant twelve feet high, occupies a position to the right. In the foreground are various other smaller plants. The divided fronds on the extreme left are *Sabal Adansonii*, a plant twenty feet high, with twelve fronds."

"In the upper right hand corner is seen a magnificent plant of *Cycas circinalis* with seventy-five fronds; a fine plant of *Pandanus utilis* is at the left, as is also a portion of the end wall covered with *Clorodendron Balfourii* occupying a space of 35 feet in width and 16 feet high."

"The tall palm in the lower left hand view is *Cocos plumosa*, twenty-seven feet high, at the back of which is a *Cardiodynia* nearly ten feet high and six feet in diameter."

"At the lower right hand corner is a view of one of the aquatic houses, 60x40 feet, in which can be seen *Vallisneria spiralis*, growing in all her glory. The largest of the leaves were six feet and three inches in diameter October 20 last."

"In group number 2, the view in the upper left hand corner shows at the left a *Draena fragnans* twenty-seven feet high, with palms for furnishing. At the right of the walk are great bamboos twenty-six feet high."

"In the view at the upper right hand corner is seen a portion of a plant of *Draena fragnans* reaching to the roof,

VIEWS IN THE ALLEGHENY PARK CONSERVATORIES GROUP No. 1

with a fine specimen of carludovica in the foreground.

"In the lower left hand corner is seen a fine mass of *Philodendron pectusum* or *Monstera deliciosa*. Mr. Hamilton often has as many as twenty ripe fruits on this group at a time. This plant is also known as the 'Lyre plant'.

"In the lower right hand corner is a side view of various palms growing in most tropical luxuriance. It will be seen

there are seaforthias, kentias, cocos, latanias, and several other kinds."

Bignonia Venusta.

How seldom do we meet with this grand old greenhouse climber now; occasionally we see a half neglected apology of a specimen in a private conservatory, where it may or may not produce a dozen or two of its great clusters in mid-winter, and then be admired for the

grand, drooping orange yellow clusters of trumpet shaped flowers. The gardener in charge will then and there resolve to give the plant a better treatment another season, but when spring comes, with its various calls for work in every department, the good resolutions are pushed back, or forgotten entirely.

I remember the time when we considered this plant one of our best and most useful winter flowers, and I do not see

why it should not be used now in many a way for decorating, etc. But we gave it better care than I have seen it get lately in such places as referred to above. In April or May the old plants, which were planted out in different houses and trained along rafters, and in some cases along the ridge or on wires, got a severe pruning, leaving only a few of the strongest branches, all the rest was cut out. In a few weeks the new growth will have made enough headway to warrant a good feeding at the roots, and then all weak shoots are removed again, and only the very strongest left to grow and encouraged in every possible way. The plants require a very sunny and airy position, and if trained along the ridge near the ventilators the leading shoots will harden off sooner than those trained on the rafters, which will do so two or three weeks later, and as their flowering depends on this ripening, the latter will naturally bloom later. Several branches will come out from this year's young growth at nearly every eye along the whole length, and from the ends of these we get the bulk of our flowerheads, although the main branches will also flower. The clusters under ordinary treatment are composed of twenty-five to forty individual flowers and buds, each one of them when fully developed, measuring about five inches long, and one to one and a half inches across the mouth, of a deep orange yellow, and I know of no better ornament for a high greenhouse ridge than a plant of this bigonia in the winter months when in bloom, with all the lateral branches gracefully drooping and swaying, some two to three feet long, others longer if not tied up, everyone of them terminating in a large bunch of yellow curved trumpets.

The plant is not an unsightly one, nor is it very apt to harbor insects of any kind, unless it should stand in a rather close and warm house, which is kept rather dry, when red spiders would probably attack it, but frequent syringing will dispel them very soon. Cuttings of it will not readily root unless great care is bestowed upon them; bottom heat is indispensable, and damping off usually the final result. I have succeeded best in August with a hotbed frame, but layering gives better results, as it can be done at any time in the year and with any kind of wood.

J. B. KELLER.

ROCHESTER, N. Y.

South American Orchids at Home.

Cattleyas, the most beautiful of all American orchids, are found in the most varied positions, sometimes on the branches of giant trees in the virgin forests of the low ground, sometimes on the rocks and steep slopes of mountainous regions, at elevations ranging from 3,250 to 4,225 feet above sea-level. When they grow on trees, as is almost always the case in the low-wooded regions, it is usually on certain species of trees the bark of which seems to be particularly well suited to their requirements, and usually on the border of forests and in clearings, where daylight and sun can freely penetrate. Of all the trees I have seen in my travels, the gourd tree (presencia) seems to have a bark which is best adapted for the

growth of cattleyas and other epiphytal orchids, and this is the reason that the species is very valuable for cultivation in countries where orchids can be grown in the open air. There are in the South American States, hundreds of towns and villages, the population of which is employed in setting quantities of orchids on gourd trees. In the hottest parts of South America, almost every dwelling is surrounded with a little plantation of plantain, sugar cane, coffee, etc. Almost everywhere I found a few gourd trees, spreading their fine clear green foliage among these plants; very often the branches are literally covered with orchids of various genera and species. More than once I have seen sturdy schomburgkia mingling their long floral racemes with those of some beautiful cattleya, magnificent specimens partly shaded by the upper branches of this strange tree, which are themselves splendidly decorated with rodriquezia, ionopsis, small oncidium, and other less luxuriant plants. The gourd tree does not grow to a very great height (the highest I have ever seen was scarcely 23 feet high); therefore, it is admirably adapted for the culture of orchids in the open air. The vigor and health of plants which grow on this tree are marvellous. Its bark certainly contains some substance exceedingly favorable to the nutrition of roots and plants which grow upon it, as upon no other tree is the same vigor of roots and shoots observable.

In cattleyas, especially, I have always remarked the strength and size of the roots which the plants send out most abundantly in all directions, and which twine closely around the branches and trunk. I saw some years ago in the Botanic Garden at Demerara (British Guiana), a very fine collection of orchids, many of which were cultivated upon gourd trees. Several long avenues of these elegant trees were devoted to the growth of epiphytal orchids, and the plants seem to thrive well under this simple and inexpensive mode of treatment. The great secret or success in all systems of cultivation is to follow nature herself; I therefore recommend the pursuance of similar investment in our European glass houses.

The natural habit of the branches of gourd trees allows the light to penetrate everywhere, and they can be selected of whatever size is desired. On the borders of this "orchid garden" (at Demerara) are rocks, suitably arranged on which species which in tropical regions grow on rocks and in stony places can easily be cultivated. Cattleyas can be managed in two ways, as they grow upon rocks as well as upon the trees. Many times have I seen splendid plants of cattleya in the mountainous regions of America growing on enormous perpendicular rocks, where trees also grow and where the specimens are accessible only to the most intrepid of the natives, whose only support when gathering them is a strong rope fastened to the summit of the precipice. When cattleyas grow in forests they are usually found in more shady places than those which grow upon rocks, consequently the leaves and bulbs are always darker in color and less firm in texture; while on the other hand exposure to the sun colors the leaves and bulbs of the others with clearer hues and renders the substance of the foliage much firmer and stiffer.

Judging from what I have observed an excess of shade is far more injurious to cattleyas than excessive light. In a South American village I saw hundreds of cattleyas planted on the tops of walls of earth, exposed to the full sun and flour-

ishing splendidly. As regards size I do not believe that any other orchid attains to such enormous proportions as the cattleyas when placed in a favorable situation and at the same time have plenty of warmth and moisture. I have seen plants weighing more than 150 lbs. each, and bearing more than 300 bulbs. It must have been many years before, even in their native land, plants could have grown to such a size, and in this case it was only under conditions the most favorable to their development.

Cattleya eldorado grows only upon trees of medium size, with uneven and rough barks, on the borders of dense virgin forests, close to streams and usually in districts which are flooded during some months of the year.

In the same forests and under similar conditions are found *C. superba* and its varieties and *C. Holfordii* or *lutcola*, the latter generally growing low down on the smallest and lowest trees. *C. Gaskelliana* grows in high and mountainous regions usually on very tall trees of enormous breadth, in the thick forests on the sides of mountains. The different varieties of the Mossie group are found in high regions on tall trees on the borders of forests.

C. Mendellii and its varieties are seen on small trees and very often on rocks and the sunny slopes of precipices. *C. Percivaliana* always grows on high blocks of rock or on the slopes of mountains and sometimes grows perpendicularly on rocks in the very high regions not far from the habitats of odontoglossum. *C. Warocqueana* is only met with on trees of giant height in moderately high situations.—E. Bungeoeth in *Journal des Orchidees*.

Dendrobium Thyrsiflorum Var.?

This new and fine variety recently flowered in the collection of William W. Lunt, of Hingham, Massachusetts, and comes from a new locality. It differs from the type in having much longer bulbs, the foliage, also, being larger and very broad. Bulbs 30 to 35 inches long, and very stout. Leaves 7 to 8 inches in length by 3½ to 4 inches in breadth. This plant was imported about a year ago, and flowered this season from the imported growth, bearing two racemes of flowers 8½ and 9½ inches in length respectively, and bearing 35 and 38 flowers, some of the flowers measuring fully two inches across. The flowers are pure white, with very broad sepals and petals, thrown boldly backward, with a fine yellow lip, broadly expanded, lighter and brighter in color than the type. The broad sepals are finely cut or toothed along their edges, in the way of a carnation, and have a glistening or sparkling appearance, as though covered with frost or small particles of mica. An added charm is its delicate fragrance.

Cyp.

CYMBIDIUM MANDAIANUM.—This is a lovely variety, for at present I do not think it a new species. The plant in its growth and manner of blooming resembles *C. Lowianum*. At present it has about fourteen flowers on the spike, but they will doubtless increase in number as the plant gains strength. The flower now before me, sent by Mr. Manda, of the United States nursery at Hextable, is upwards of four inches across, the sepals and petals yellow, tinged with green; lip white at the base, with a large patch of citron yellow where the color is deep maroon in *Lowianum*. The side lobes

VIEWS IN THE ALLEGHENY PARK CONSERVATORIES. GROUP No. 2.

are also tinged with yellow at the extreme base of the lip, and at the base of the column is a blotch of rich yellow, the lip being ornamented with two large, raised, white fleshy ridges. It is a magnificent and distinct plant.—*W. H. G. in London Garden.*

Ixoras.

The ixoras are among the most beautiful flowering stove plants in cultivation, and certainly deserve more extensive cultivation than they receive in this country. In England they are among the most popular plants for stove and greenhouse decoration, and specimen ixoras are a marked feature of all the horticultural exhibitions in that country. One reason that they are not grown more extensively is that many gardeners have the idea that they are plants of difficult cultivation, which is a mistake, for with a little attention and labor, together with sufficient heat, anyone can grow them. They are usually of compact, bushy habit, and require little or no training to make sharply plants. They are natives of Asia and Africa, although a few species have been found in tropical America and the Pacific Islands.

Ixoras should be grown in a warm

house or stove, and when growing plunged in bottom heat and kept shaded; do not let them get dry at the roots, and syringe frequently in order to ward off the red spider and thrip. A summertemperature of about 75 degrees suits them, and an ordinary stove or warm greenhouse is sufficient for winter. Re-pot after flowering, using fibrous peat, a small quantity of fibrous loam, and a little fine sand, potting very firmly. When they are growing freely and setting the flower buds, an occasional watering with liquid manure is beneficial. In autumn and winter keep a little dryer, and give less shade, so as to thoroughly ripen the wood. About March give more water and bottom heat and plenty of moisture till growth is completed and flowers set. Then give less shade and move to cooler house to flower.

There are over twenty different varieties in cultivation, ranging in color from white to orange scarlet, many of the best of them being greenhouse hybrids.

I. coccinea is one of the finest species, and blooms very freely in a young state, producing immense trusses of bright red blooms. This species is a native of Java, where it is considered a sacred plant and from the color and quantity of its flowers it received the name of tree of fire.

Ixora acuminata is a very strong growing species, with large, dark green leaves, and large white flowers. Native of East Indies.

I. amabilis, a garden hybrid of good habit and vigorous growth, producing large corymbs of deep salmon colored flowers.

I. Colei, a garden hybrid of good habit, producing in great abundance large, round corymbs of pure white flowers.

I. Griffithii, (syn. *I. hydrangea-formis*) a very large growing plant with bright orange flowers, and is one of the best of the large growing species.

I. Javanica, very distinct and free flowering; the flowers are produced in dense corymbs, and are orange in color.

I. Javanicus floribunda, a garden hybrid similar to the above except that the flowers are bright scarlet.

I. Prince of Orange, a garden hybrid of very dwarf habit and remarkably free flowering. The flowers are rich orange, tinged with violet, and are produced in dense corymbs.

I. Williamsii is a garden hybrid, and is one of the best in cultivation; it is of very free growth, the flowers dark salmon and very large.

I have enumerated only a few of the most distinct varieties. There are many

others, but they all have the same general characteristics, and as the taste for stove plants is on the increase, I am sure they will soon be as popular here as they are in England.

Maywood, N. J. JAMES S. TAPLIN.

I am not going to deal with this subject in any scientific way, inasmuch as I know nothing about it (which is a confession, perhaps, some scientists will also make). It is defined by some as a bud- or seed-variation, and it is with the former of these I have now practically to deal. It is one of considerable interest to the gardener, and we all know how frequently it occurs in chrysanthemums, whilst we have many instances of it amongst roses.

There are two ways in which this variation occurs in the rose—(1), in a change in the habit of its growth; (2), in a change in the color of the flower. We have many instances of what are called climbing varieties of many of our roses, the most notable of these being perhaps climbing Devonensis, and climbing Niphetos. We have also Victor Verdier, Captain Christy, Charles Leclerc, and others, which have developed the same tendency. The why or wherefore I have never yet heard explained. Take, for example, Devonensis, in its normal condition a very small and even delicate grower, there appeared many years ago with Mr. Pavitt, of Bath, a very vigorous shoot, which took away to a length of sixteen or eighteen feet in one season. This was so very remarkable, that he determined to propagate it; it has remained true to its character, and makes shoots sometimes of twenty feet in a season. At the same time there is no deterioration in the flowers, which are so like those of the type that the National Rose Society has bracketed them together. Another instance of a similar character has occurred recently in climbing Niphetos. I have brought out two years ago by Messrs. Keynes, Williams & Co., the noted Salisbury firm: this, like that previously mentioned, will sometimes grow twenty feet in a season, although as it is well known, the plant itself is a dwarf tree, but of more vigorous constitution than Devonensis. I do not at all know how this is to be explained. Climbing, of course, in the true sense of the word, they are not, but why these particular plants should have so acted is a puzzle. [Possibly from atavism, or reappearance of some ancestral condition, Ed.]

Amongst the hybrid perpetuals we have also several so-called climbers, but they do not attain to the same vigor of growth as the teas mentioned, still they will make shoots sufficiently long to make them good pillar roses, such as Captain Christy, Bessie Johnson, Charles Leclerc, and Victor Verdier, but I have not seen on any of these as good flowers as could be gathered from dwarfs of the same variety; this may not be the experience of others, but it certainly is mine. They make very effective pillar roses, and when these are required it is better to use them than hardy summer-blooming roses.

But the most frequent and most interesting cases of sporting are those which occur in the flower; they are continually taking place, and perhaps in more cases than we are aware of. The usual procedure is this: A branch of some particular variety shows a bloom of a different shade of color; buds are taken from this branch; the budded or grafted plants are carefully watched to see whether the sport is what is called fixed, i. e., whether the blooms produced on plants budded from the original one will show flowers of the same form and color; sometimes they do not, and at other times they remain true. A neighbor of mine got on one of his plants of Anna Olivier a very beautiful orange-yellow flower. As the rose stands A1 in its form and substance, it need hardly be said that a flower like it, but of this color, would have been a great acquisition; it was placed in the hands of one of our most eminent rose growers, who gave it a fair trial; but, alas, the plant reverted to the type, and the hopes raised on it have been disappointed.

I have noticed that very often on these sports there is some deterioration in the substance of the flower, as in the case of White Baroness, which is not nearly so full as the rose from which it has originated; while in another flower of the same origin we have an entirely different build, as Merveille de Lyon; it is more open, and not such large petals; has a great tendency to show the eye. I once thought I had obtained a white Catherine Mermet, that was before The Bride was introduced, but it did not remain true. Some roses are much more inclined to sport than others, Baroness Rothschild is one, and Madame Clemence Joigneux another; from the former we have had Mabel Morrison, White Baroness, Merveille de Lyon, and, perhaps, Puritan; from the latter, Pride of Reigate, and William Warden. In the case of the sports from the Baroness, they are all in the direction of white flowers, the pale tinge in the type being eliminated; the sports from the latter are curious, one is a craped flower, not only of no beauty, but I think of positive ugliness, and William Warden is of a very delicate shade of pink, but cannot be depended upon, as it is constantly receding to the original color.

Lady Mary Fitzwilliam has given us the sport of Lady Alice, but its distinctness is, in many cases, very questionable. I have seen them distinct, but I have also seen them so alike that they might have been exhibited under either name.

There is one unpleasant thing connected with these sports, and that is, you can never be sure that they will not hark back again, thus there can be no more distinct sport than that remarkable rose, Sir Rowland Hill, a sport from Charles Leclerc, of the most taking deep claret color, but in one instance I heard of this year it had reverted to the type, and was a veritable Charles Leclerc. I do not, however, think that this is any proof against the fixity of the sport, but where this is general, where there is no certainty of what character the bloom may be, there one may reasonably question whether the sport is worthy of relation in a separate form. If, let us suppose, in half a dozen plants of any variety, five were to revert to the type, then it would be valueless. It is quite possible, too, that soil and situation and stock may all have influences of which we may be ignorant, and so, in many cases, lead to disappointment. I was this year acting as judge at a northern show; we had to judge some stands of 48's, and in one of

them there appeared, under different names, two roses which certainly bore a most remarkable resemblance to one another; they had different names, and as the judging had not commenced, it was permissible, according to the rules of the National Rose Society, with which this society was affiliated, to call on the exhibitor to take one away. He was accordingly sent for; he protested that he exhibited them under the names they bore, and that they were not duplicates. This satisfied me, but not my fellow judge. In vain I told him this had not been bracketed among the "too much alike" roses, and that therefore the exhibitor had a perfect right to put them up. Nothing would satisfy him, and before we judged the stands this had to be altered. I think I was right, but it only shows the difficulties that may arise from these sports. I think it would have been a monstrous thing to say that the person who sent out the sport had acted improperly, as he had grown and tested it. It bore all the character he gave it, and this was only another instance of the vagaries of sports. By-the-by, is Princess of Wales a sport from Comtesse de Nadaillez?

Here are some cases, then, in which the sport is quite equal in beauty to its parent, such as in the case of The Bride, and some in which it is, I think, inferior, as in Pride of Reigate, but I know of no case in which it surpasses the parent in beauty.—*Wild Rose in Gardeners' Chronicle.*

Lining Graves.

In response to the article in the AMERICAN FLORIST of June 11 by H. H. Battles, I will tell the little I know about lining graves. It has become quite the fashion in this small town, and is sometimes very nicely done.

About twenty yards of bleached muslin are required—not necessarily of best quality. The box being lined with the muslin, neatly tacked in, the edge is drawn over the edge of box, and tacked on the outside. Then cut for the grave, long enough to reach from top of box to top of grave, and about half a yard extra, cut a sufficient number, so that when sewed together on a machine the width will smoothly tuck around the outside of the box. Next a panel of boards, as described by Mr. B., is laid around the opening to the grave; these should be halved together at the corner to make a smooth surface. While two persons are tacking the box in the grave a third holds the lining gathered in his hands, and no earth can get inside; this lining is then cut at the corners sufficient to allow drawing it smoothly over the panel, tacking it to the outside; the corners will need a square piece to cover them, and all tack heads should be concealed by pushing the point through the cloth upward, and then, when turned point downward, the cloth covers the head. Over this panel, on one grave, for an old gentleman, small evergreen branches were laid, and on these pretty sprays of *Deutzia gracilis*, while at intervals, but not in set form, around the top of the lining, were pinned sprays of the same flower. The box cover is also covered on both sides with the muslin, and the top trimmed to correspond with the grave; the strap blocks are first removed; these are also covered and replaced. I assisted in trimming such a lining, and we used white asters and smilax in dainty bunches, festooned to the lining with coarse wire hair-pins, which readily push through the muslin, and the

BASKET OF LILACS

loop holds the flowers. Evergreens were laid on the panel, and asters and smilax over them, but not to conceal all the white surface; at the head of the grave, on the panel, was a bouquet of white flowers. In both instances the mounds of earth were entirely concealed by branches of evergreen.

For the funeral of an elderly lady recently I saw just the box cover, which was covered with cream white cloth, and the head of the cover was neatly draped with the cloth by laying it in plaits at the edges, and leaving the centre somewhat loose. In the centre was the word "Rest," made of small oval round leaves sewed or stuck on. Around the edge of the foot half of cover was a vine of smilax caught with bunches of dark pansies, also a pretty bunch below the wood. It was very beautiful, except the letters, which were not to my taste, but were pretty in many people's eyes. A grave with white lining, neatly put in, loses all its ugly look, and is a comfort to the friends.

L. S.

Basket of Lilacs.

The basket used in the illustration is one that we have filled in various ways with good effect. We tried for a long time to get just this shape. The dealers in baskets had many kinds of hampers, but not just what we wanted. Finally we found it in small champagne baskets (pint bottles, I think). Some we painted with Aspinalls enamel which can be had

in beautiful colors; others we gilded. Should you attempt this let me caution you against using the cheaper kinds. We have found it much better to buy the powders and the liquid separate, mixing as we wish to use it.

The illustration is more to show the style of basket than the arrangement of the flowers. We simply put the lilac in carelessly that it might make an attractive picture, the basket being used more as a box to send loose flowers in than anything else.

One Christmas we had quite a number of these baskets and used them only for particularly fine flowers. We sold none for less than ten dollars and some for fifteen and twenty; in every case to the entire satisfaction of the customer. We line the basket with wax paper and arrange the flowers as prettily as we know how, bearing in mind harmonious colors and trying to produce an effect that will give the recipient a pleasant surprise. After the basket is filled we close the lid and tie a handsome piece of ribbon around it with a large bow on top.

We have tried for a long time to get some very rough baskets made from natural willow with the bark on, but have been unable to do so. If any reader of this article is in a position to make these baskets or to have them made I am confident that a good market will be found for them. Great care, however, should be used in selecting a few good shapes. The French make something of this kind, using a willow whose bark is a beautiful brown.

H. H. BATTLE.

Names and Addresses of Chairmen of Committees of Toronto Gardeners' and Florists' Club for S. A. F. Convention, August, 1891.

Reception Committee—Mr. John Chambers, Superintendent Parks and Gardens, St. Lawrence's Hall, Toronto, Ont.

Trade Exhibit Committee—Mr. Thomas Manton, florist, Eglinton, Ont.

Entertainment Committee—Mr. W. J. Laing, 401 Huron street, Toronto, Ont.

Ladies' Committee—Mrs. Fraser, florist, Spadina Crescent, Toronto, Ont.

Introduction Committee—Mr. F. G. Foster, florist, Hamilton, Ont.

Decoration Committee—Mr. C. Arnold, florist, 521 Queen street, W., Toronto, Ont.

Finance Committee—Mr. J. H. Dunlop, florist, corner of Bloor street and McKenzie avenue, Toronto, Ont.

Printing and Badge Committee—Mr. S. E. Briggs, of the Steele Brothers Co., corner of Front and Jarvis streets, Toronto, Ont.

Bureau of Information—Mr. George Vair, care Sir D. S. McPherson's Chestnut Park, Toronto, Ont.

Coming Exhibitions.

June 29, Hamilton, Ont.—Rose show Gardeners' and Florists' Club of Hamilton. H. Browne, Sec'y., Wentworth street.

July 22-23, Toronto, Ont.—Flower show Toronto Electoral District Agricultural Society. J. P. Edwards, Sec'y., 146 Wellington St. West.

September 1-4, Boston.—Annual exhibition of plants and flowers Mass. Hort. Society. Robert Manning, Sec'y., Horticultural Hall, Tremont St.

September 2-3, Galt, Ont.—Fall exhibition Galt Horticultural Society. Thomas Vair, Sec'y.

September 8-10, Hartford, Conn.—Fall exhibition Hartford County Hort. Society. Edwin A. Taylor, Sec'y., P. O. box 1015.

September 15-17, Boston.—Annual exhibition of fruits and vegetables, Mass. Hort. Society. Robert Manning, Sec'y., Horticultural Hall, Tremont St.

November 2-8, New York.—Chrysanthemum show Madison Square Garden. J. W. Morrissey, Sec'y., Madison Square Garden.

November 2-5, Hartford, Conn.—Chrysanthemum show Hartford County Hort. Society. Edwin A. Taylor, Sec'y., P. O. box 1015.

November 3-6, Boston.—Chrysanthemum show Mass. Hort. Society. Robert Manning, Sec'y., Horticultural Hall, Tremont St.

November 3-6, Milwaukee, Wis.—Chrysanthemum show Wisconsin Florists' and Gardeners' Club. W. H. Ellis, Sec'y., 135 Mason St., Milwaukee.

November 3-7, Detroit, Mich.—Chrysanthemum show Detroit Florists. Robert Flowerday, Sec'y., 460 John R. street.

November 4-6, Wooster, O.—Exhibition Wooster Floral Club. W. A. Porter, Sec'y.

November 5-11, Bay City, Mich.—Chrysanthemum show Bay County Hort. Society. T. J. Cooper, Sec'y., 811 North Water street.

November 10-12, Pittsburgh.—Chrysanthemum show Pittsburgh and Allegheny Florists' and Gardeners' Club. G. Osterle, Sec'y., 508 Smithfield St., Pittsburgh.

November 10-12, Newport, R. I.—Chrysanthemum exhibition Newport Horticultural Society. James Galvin, Sec'y.

November 10-12, Toronto, Ont.—Chrysanthemum show Toronto Gardeners' and Florists' Club. A. H. Ewing, Sec'y., Normal School, Toronto.

November 10-12, New Bedford, Mass.—Chrysanthemum show New Bedford Gardeners' and Florists' Club. Geo. C. Bliss, Sec'y., 34 Arnold St.

November 10-13, Philadelphia.—Chrysanthemum show Penna. Hort. Society. D. D. L. Farson, Sec'y., Horticultural Hall, Broad St.

November 10-13, Chicago.—Fall exhibition Horticultural Society of Chicago. James D. Reynolds, Sec'y., Riverside, Ill.

November 10-13, Minneapolis, Minn.—Chrysanthemum show Minneapolis Florists' Club. E. Nagel, Sec'y., 1116 West Lake St.

November 10-14, Indianapolis.—Chrysanthemum show Society of Indiana Florists. W. G. Bertermann, Sec'y., 37 Mass. Ave.

November 11-12, Worcester, Mass.—Chrysanthemum show Worcester County Hort. Society. Edward W. Lincoln, Sec'y., 5 Oak St.

November 11-12, Galt, Ont.—Chrysanthemum show Galt Hort. Society. Thos. Vair, Sec'y.

November 11-12, Montreal.—Chrysanthemum show Montreal Gardeners' and Florists' Club. W. Wilshire, Sec'y., 688 Sherbrooke St.

November 11-13, Springfield, Mass.—Chrysanthemum show Hampshire County Hort. Society. George D. Pratt, Sec'y.

November 11-13, Utica, N. Y.—Fall exhibition Utica Florists' Club. J. C. Spencer, Sec'y.

November —, New Orleans, La.—Chrysanthemum show New Orleans Horticultural Society. Chas. Wise, Sec'y., Third and Prytanis Sts.

November —, Buffalo.—Chrysanthemum show Buffalo Florists' Club. Dan'l B. Long, Sec'y., 457 Main St.

November —, Washington, D. C.—Chrysanthemum show Washington Florists' Club. Eugene Cadmus, Sec'y., 1419 R St. N. W.

November —, Providence, R. I.—Chrysanthemum show Rhode Island Hort. Society. C. W. Smith, Sec'y., 55 Westminster St.

November —, Baltimore.—Fall exhibition and chrysanthemum show Gardeners' Club of Baltimore. Henry Bauer, Sec'y., 1875 N. Gay St.

November —, London, Ont.—Chrysanthemum exhibition Forest City Florists' and Gardeners' Society. Wm. Gamage, Sec'y.

November —, Germantown, Pa.—Chrysanthemum show Germantown Hort. Society. Thos. E. Meehan, Sec'y.

November —, New Haven, Conn.—Chrysanthemum show. New Haven Chrysanthemum Club. Miss Frances S. Ives, Sec'y., 478 Orange street.

Boston.

The hot days of June have been making their impression on the roses, and as far as the in-door crop is concerned there might as well be none, for most of those now obtainable are scarcely recognizable as roses, and are not worth the trouble of cutting and sending to market. Out-door roses are, however, of pretty good quality, thanks to the recent rains, without which the roses would now have been in a sad plight, and the great rose and strawberry exhibition of the Massachusetts Horticultural Society, on June 23 and 24, might as well have been declared off. The copious showers of the past week have worked wonders for the parched-up crops, and, judging from present indications, the exhibition will be a very creditable one.

Carnations are still very abundant, as are also sweet peas. Carnations are more plentiful this spring than ever before in this locality. There is now a good regular supply of pink pond lilies and lily of the valley in the market.

The florists have been kept fairly busy with the many weddings and graduations, the culminating point having been reached on class day at Harvard, which occurred on June 19. The festivities on this occasion far exceeded those of any previous year, and the decorations of all descriptions were on an unprecedentedly large scale, so that the market was almost cleaned out of everything that was first class in the flower line. Palms, hydrangeas, and other decorative plants were also extensively used.

The only remaining occasion calling for a large consumption of flowers is the annual school festival, and after this is past the florists will have little to interfere with their discussion of the approaching Toronto trip, and the various well-

earned recreations of the season. Bunker Hill day, June 17, which is a holiday here, was celebrated by about twenty of the gardeners and florists by a trip to Scituate Beach, where a very pleasant day was spent. Mr. Edward Hatch, the auctioneer, was the guest of the day, he having extended many similar courtesies to the participants on previous occasions.

The plant growers seem to be generally satisfied with the results of the auction sales during the spring, fair prices having been obtained as a rule for well-grown stuff. Mr. F. Sander had a very successful orchid sale here on June 13, at which many fine and rare specimens were disposed of. The sale was under the supervision of Mr. A. Dimmock.

Mr. W. R. Smith, of the Botanical gardens at Washington, visited Boston for a few days, his Mecca being the grounds of the Arnold Arboretum, where he spent many enjoyable hours in company with his friend, Jackson Dawson, looking through the magnificent collection of hardy shrubs and trees over which Mr. Dawson presides, comparing notes and arranging for exchanges of novelties, etc. Mr. Smith pays Mr. Dawson the generous compliment of asserting that a few hours with Mr. Dawson gives him enough fresh enthusiasm and new ideas to keep him busy for six months. Mr. Smith also visited the new Back Bay Park and Harvard Botanic Garden.

Mr. R. Cameron, head gardener at the Botanic Garden, sailed for Europe on Saturday, June 20. He expects to visit Great Britain, France, Germany, and Spain, and will be absent two or three months.

Messrs. J. N. May and Ernst Asmus passed through Boston on their way home from a fishing trip at Rangleey Lakes. Fishermen's stories are always entertaining at least, if nothing else, and doubtless the two gentlemen will be glad to rehearse their exploits to any inquiring friends.

W. J. S.

Chicago.

Spring plant trade has been very large. There was quite a shortage on some stock, especially geraniums. But prices remained low in spite of the shortage. The larger part of the increased demand is said by some to be due to the immense number of bedding plants now used by dealers in suburban real estate in decorating their allotments with flowering plants in order to favorably impress the home seeker. Certainly many thousands of bedding plants have been used for this purpose. But in nearly every case the prices paid have been low. The real estate men who contemplate the decoration of an allotment generally make out a list of the plants wanted and send it to every florist in the directory to bid upon. As a result the supply of geraniums was early disposed of in large lots but at low rates, and later on the supply was found insufficient for home trade. It is to be hoped that this demand may be a permanent one, but it is feared that it will not as it will naturally depend upon the activity in the real estate market, a mighty uncertain quantity.

Mr. H. B. Beatty left for home on the 17th inst.

Mr. J. T. Anthony is enjoying better health at present than for some time. He is far from being in perfect health but is able to be around. He has been very poorly all winter.

By the way, Mr. Anthony doesn't take much stock in studying up on artistic floral arrangement. He says the chances of

being able to put artistic ideas into execution are altogether too slim. He never had but one carte-blanche order. In every order he ever had, with the one exception noted, the flowers to be used were designated by, and he had to arrange them according to the ideas of, the party ordering them. He says he has put together some of the most horrible combinations of color imaginable, but they were ordered that way and he would have lost the order had he attempted to tell the lady that something else would have been in better taste. But he says also that when he had his one carte-blanche order he made a better decoration for \$250 than the one he did for the same party at the same place at another time—under specific instructions—at a cost of \$1,100, and while this fact was admitted at the time he still receives specific orders.

Regarding the reckless way in which some florists do business the story is told that one of our local lights refused to plant certain geranium beds for \$8 per 100 plants but agreed to fill the beds for \$35, this without figuring out how many plants would be required. His offer was accepted. He filled the beds and it took a round 500 plants. So he refused \$8 and accepted \$7 a 100.

At Lincoln Park work is progressing upon the new palm house. The foundation is now completed and the heavy iron-work is on the ground ready to be placed in position. In order to screen the unsightliness of the building material from observation the site has been enclosed by a high board fence, at the foot of which morning glories and other climbers have been planted and which will soon convert the fence into an object of beauty. Strings are provided for the morning glories, but for some of the more rambling climbers brush has been tacked onto the fence. Mr. Pettigrew's garden of hardy flowers, though hardly yet in condition, is attracting much attention; the old half-forgotten favorites seem to bring back many happy recollections to the older visitors to the park, judging from the exclamations overheard. The beds of stocks have been a very attractive feature for some time, but are now past their best. The beds of geometrical patterns are all there as usual, some of the designs being very intricate. Near the old palm house is an immense bed of gladioli bordered by mignonette and acahyphas. In the hardy garden *Cypripedium spectabile* is now in bloom, and visitors tell one another, "Don't fail to see the Indian moccasin flower."

Trade was on the whole very quiet the early part of last week, but during the latter half was active. The quality of the stock is about the same, no first-class roses to be had, with the exception of La France. This rose is certainly the best pink variety for summer flowering, showing less mildew than any other rose at present in the market. Jacques are nearly gone. Those on the market are the tail end of the open ground crop, and are rather small and poor. A few growers are cutting some good Beauties from plants grown for summer trade. The flowers are of good size and fine color, though the stems are rather short, owing to the fact that the plants are still small. Sweet peas from the open ground are coming in freely from southern Illinois.

The decorations for the Philadelphia Clover Club banquet at Kinsley's were unique. The center piece consisted of an immense clover leaf about six feet in diameter, the center composed of red clover and the outer edges of white. Running around in this clover field were seen about

a dozen pigs (in candy) that seemed to be enjoying themselves hugely. The whole design was lit up by tiny electric lights. The mantels, radiators, window recesses and every available place was made into a veritable clover field. The decoration was done by Joseph Curran and reflected great credit upon him.

F. E. Parcell's new houses at Lake Forest are two 18x100 and one 18x218 instead of as given in last issue. He is also building a new dwelling house.

At the McCormick rose houses at Lake Forest, one house will be devoted to carnations this year.

Mr. J. L. Russell of Denver is in the city this week.

Mr. W. C. Cook is here looking after the interests of Pitcher & Manda, Short Hills, N. J.

A party of Californians called at World's Fair headquarters Monday to protest against the appointment of Wm. Forsyth and to urge the appointment in his place of Gen. J. DeBarth Shorb of Los Angeles.

Springfield, Mass.

The Hampden County Horticultural Society's rose and strawberry show was held at the city hall June 15 and 16, 1891, the date being changed from the 18th and 19th on account of the forwardness of roses. The exhibition, although small and not very well attended, was very fine and well staged. The receipts were devoted to the Aged Couples' Relief fund.

The professionals exhibiting were the Mieliez Horticultural Co., a large collection of cut blooms of hardy roses and palms in pots; N. J. Herrick, a large specimen of the Abyssinian banana tree and a large collection of palms and ferns, which were to decorate the orchestra stand; the Gale Floral Co., cut blooms of house roses and orchids; W. H. Spooner, Jamaica Plain, Mass., a large collection of cut blooms of hardy roses; S. T. Hammond, this city, pyrethrums and cut blooms of roses.

The Springfield Amateur Horticultural Society held its annual rose and flower show at the Union armory on June 16 and 17. The exhibition was large, varied and well attended, the chief attraction being the exhibition of Pitcher & Manda, Short Hills, N. J.

The professionals exhibiting were Pitcher & Manda, Short Hills, N. J., a large collection of orchids, palms and tropical plants, such as never before seen in this section, in charge of Mr. Hodding; William Falconer, Glen Cove, L. I., collection of evergreens, sweet peas and hardy herbaceous plants; Thaddeus Hale, South Bayfield, Mass., forty varieties of mound, sea and old-fashioned hardy pinks; W. H. Spooner, Jamaica Plain, Mass., large collection of blooms of hardy roses; Jagel & Co., West Springfield, Mass., fuchsias, palms, ferns, geraniums, including a new variety, "Johanna," originated by Mr. Jagel, which is like the "Happy Thought," except that the leaves are curled and the stems are white with a rosy tint; S. T. Hammond, Springfield, Mass., pyrethrums and roses; C. Atkins, Springfield, Mass., hardy herbaceous plants; Gale Floral Co., Springfield, Mass., vase of cut roses; A. B. Copeland, Springfield, Mass., pansies, fuchsias, begonias, calceolarias, verbenas, geraniums and the native hardy pitcher plant *Sarracenia purpurea*; C. L. Burr, Springfield, Mass., roses, pansies and hardy herbaceous plants; F. R. Belden, Springfield,

Mass., fuchsias, petunias and a large collection of seedling tuberous begonias; G. E. Phelps, Springfield, Mass., large collection of many kinds of begonias. C.

Toronto.

As business slackens convention matters begin to take precedence and members of the various committees appointed by the club are meeting to discuss ways and means in order to obtain success for their respective departments.

How are the members of the S. A. F. on cricket? If the florists of the United States can scare up an eleven I think the florists of Canada could do likewise. An enjoyable match would no doubt be the result. Park Superintendent Chambers will take care that a good ground is secured.

Everyone knows the partiality of the S. A. F. for bowls (no insinuation intended) and the interests of the bowlers will be strictly attended to.

I hear that the combined brains of the entertainment committee are evolving among other things an excursion on the blue waters of Lake Ontario for the Friday afternoon, with banquet, dinner or feed of some kind, followed by speedily on shore.

Toronto is just now getting excited over the coming convention of the National Education Association, which takes place July 14 to 17. An army of no less than 10,000 to 15,000 delegates is expected to invade the city at that time and the capacity of our hotels and boarding houses will be stretched to the utmost to get them all under cover. Florists need not be afraid of there being insufficient accommodations here after that. E.

New York.

Mr. George M. Stump and family sailed for Europe on the Saale Saturday morning, the 20th. The night before a large party of his friends went to Hoboken to see him off. It was astonishing to see the great amount of flowers which had been sent to him; every basket on the boat seemed to be marked "Stump." One of these, which Mr. Stump showed us with a great deal of pride, was a large design of flowers representing a race track and the running of the Suburban race at Sheepshead Bay. On this were placed small horses just as they had finished—Tenny last.

The flower season here is drawing to a close, the principal work now being steamer baskets.

Mr. Charles P. Anderson, who has been so long connected with the John Henderson Company at Flushing, severed his connection with that firm June 13. It is understood that Mr. Patrick Brogan, who also has been there a number of years, will assume the management of the greenhouses. JOHN YOUNG.

Philadelphia.

ANOTHER CARNATION CONTEST.—Mr. Robert Craig has offered a cup, value \$25, to be competed for at the spring show of the Pennsylvania Horticultural Society, for the best twelve carnation blooms of any variety not yet disseminated. Open to all. E. L.

WHEN sending us small amounts in postage stamps, please select those of the 2-cent denomination.

Address THE AMERICAN FLORIST CO., Chicago.

THE CHRYSANTHEMUM CLUB of New Haven, Connecticut, has issued a prize list for the exhibition to be given next November. Classes are provided for "Florists Only," "Gardeners Only," and "Amateurs Only," and another class is open to all. There is a very lengthy list of rules, added to which are definitions of the terms "florists," "private gardeners," and "amateurs" as adopted by the club, and which we quote: "A florist is one who (owning or hiring the land and building occupied by him) cultivates plants and flowers to be sold to the public for his own profit, or derives some pecuniary interest in or derives some pecuniary profit from the cultivation and sale of plants and flowers. A private gardener is one who cultivates plants and flowers for some other person than himself, not a florist, and in which cultivation he has no pecuniary interest, and for which he derives no pecuniary profit, except as salary or wages from his employer. An amateur is one who cultivates for pleasure or for love of the plants and flowers themselves and not for pecuniary profit." Copies of the prize list may be had on application to the secretary, Miss Frances S. Ives, 478 Orange street, New Haven, Connecticut.

REGARDING the wonderful "Fleur de Lune," of which we recently gave a "description" clipped from a daily paper, a correspondent at Mt. Sterling, Kentucky, writes that there is no party there of the name given, and none of the local horticulturists ever heard of such a man or such a flower. Our correspondent seems to have failed to grasp the fact that we transferred the "description" to our columns simply as a sample of a reporter's "fak" and for the amusement only of our readers.

IN THE MATTER of a standard chart of colors progress is being made, though slowly. In the consideration of the subject it has seemed that a good beginning would be made if all could agree upon three flowers having the three primary colors, preferably species as such would be less subject to variations in color than varieties. Will our readers undertake to name three flowers that to their minds present the primary red, yellow and blue?

A NEW YORK paper says that a part of the education of Japanese girls is the art of arranging flowers, and adds that this is something for American girls to learn. With the Japanese the front of a leaf is masculine, the back is feminine. The buds are also feminine, but the full-grown blossom is masculine. Their forms and colors also have meanings, which a Japanese woman sometimes studies over for years.

WHO SHALL be the Chief of the Horticultural Department of the World's Fair is still undetermined. The appointment of William Forsyth of California, as announced in last issue, came before the local directory for confirmation at the meeting held last Friday, but the committee having the matter in charge asked for a week's further time to consider the matter and the same was granted. Hence action was deferred until June 26.

MR. HERMAN BUCHELER, of Oconomowoc, Wisconsin, writes thanking the officers of the Florists' Hall Association for the very prompt settlement of his loss by hail. He says: "On June 4 I lost nearly all my glass by hail, and to-day (June 16) I have received from the association payment for the loss. It is certainly remarkably prompt action, and I wish to publicly express my appreciation."

IN THE supplement of the *Scientific American* for June 13 appears a freely illustrated and very interesting article on the influence of electricity upon plants, giving the results of many experiments made in France, where efforts have been made to make practical use of the electric fluid in stimulating the growth of field crops.

The annual chrysanthemum show of the Northern Horticultural Society of Tasmania was held at Launceston on April 23. The chrysanthemum has attained to popularity at the antipodes as well as here, though it blooms at a different season there.

UNDER DATE of June 13 notice has been given that the interest of Charles P. Anderson in the John Henderson Co., Flushing, N. Y., has been cancelled by mutual consent, and that the business will be continued as before by the John Henderson Co.

WHEN remitting small amounts by check, please add ten cents to the amount or the check to pay the exchange on same.

THE STATE Horticultural Society of Wisconsin held its summer meeting at Kilbourn City, June 23 and 24.

WHEN you write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

THE Scottish Pansy Society held its annual exhibition June 19.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By young man in florist's business; well up in general greenhouse work. Address H. C. Passaic, N. J.

SITUATION WANTED—By an experienced rose grower, used to taking charge of cut flower establishments; single; German; born in Germany. Address S. care American Florist, Chicago.

SITUATION WANTED—In or near Chicago, by a young German florist, who thoroughly understands his business. Also good rose grower. Can give best of references. Address C. H. Fick, Summerdale, Cook Co., Ill.

SITUATION WANTED—By experienced florist, to take charge of private or commercial place; thoroughly experienced in all branches. Age 29. First class references. Address PRACTICAL, care American Florist, Chicago.

SITUATION WANTED—An experienced rose grower, used to taking charge of cut flower establishments; wants a good situation as soon as possible. References of the best, such as Craig Bros., Phila. and others. Address L. B. care Am. Florist, Chicago.

SITUATION WANTED—By a first-class landscape gardener and florist; 15 years' experience; married; position as foreman or superintendent of country, public grounds, or private place; best of references; South desired. Address TETE, care American Florist, Chicago.

SITUATION WANTED—As foreman in a large, first-class place by the 1st of August or September. North preferred. Understands growing general bedding and cut flower stock; also design work and decorating and trees. Address J. M. Post, Box 173, Memphis, Tenn.

SITUATION WANTED—As head gardener, by a N. German; single, age 35; experience of 23 years in propagating and growing roses, carnations, stove, and bedding plants; would take commercial or private place; can furnish good references. Address C. J. care Williams, 67 Bromfield St., Boston, Mass.

WANTED—Experienced man to assist in greenhouse work. State age and wages. Address Box 356, Maywood, Ill.

WANTED—100 feet of 4-inch hot water pipe and fittings. Cash for same. Address J. H. Cunningham, Delaware, Ohio.

WANTED—Trade lists of bulbs and florists stock. South Front and Gaines street, Portland, Oregon. Address WILLIAM BOSCH.

WANTED—A first class orchard, palm, fern and stove plant grower. State wages expected. Must be a teetotaler, none other need apply. Address R. J. Mendenhall, Minneapolis, Minn.

WANTED—A good gardener and propagator, and man capable of doing any kind of work on a large commercial place. Address HENRY MOORE, 31 Beale St., Memphis, Tenn.

WANTED—A married man who has had experience on a commercial place, to take half interest in a large place, where there are greenhouses well heated. A good man can find a bargain with small capital. Address HENRY MOORE, 31 Beale Street, Memphis, Tenn.

WANTED—Florist artist. Position will be vacant October 1st. Must be skillful, quick and of pleasing address. A good situation for a good man, none other need apply. Give references and salary expected. Address M. J. R. RUDICH, Pittsburgh, Pa.

FOR SALE—200 feet of 4-inch pipe; also one No. 16 fittings boiler in good condition. Address WM. A. BUCK, North Cambridge, Mass.

FOR SALE—400 feet 4-inch hot water pipe, almost new at 10 cents per foot; also four Myers boilers in good condition. Address BILGIER & BLAKEBOUGH, 5070 Germantown Avenue, Philadelphia, Pa.

FOR SALE—Floral Lawn; on account of sickness am obliged to sell my floral business, located opposite cemetery; well stocked; doing thriving business; everything sold on the premises. Will sell at great sacrifice. For particulars, address LEWIS K. FOX, Glenview, New York.

FOR SALE OR RENT—The only florist establishment in the town of Cumberland, Cumberland County, Pa., consisting of three greenhouses (1000 feet of glass) and all appliances for carrying on a profitable business. The city of Harrisburg within 15 minutes ride by Cumberland Valley R. R. stock can be purchased with a property. Title perfect. Failing health the cause of sale. Address J. M. LONGSDORF, Mechanicsburg, Pa.

For Sale.

A fine lot of *FICUS ELASTICA*, 3 to 4 feet, well furnished with leaves, 50 and 60 cents each. Also *Ficus Nitida* and a fine lot of *Cape Jasmines* in bud. HENRY MOORE, 54 Beale St., Memphis, Tenn.

FOR SALE OR RENT.

With or without stock. The old well established florist business of J. H. Campbell & Sons, About 20,000 feet of glass with hot water. Best of reasons for selling. A rare chance for a live man. Address 3601 Germantown Ave., Philadelphia.

GREENHOUSE HEATING.

By A. B. FOWLER.

Explains fully all the best systems of heating
greenhouses by both hot water and low-pressure
steam. Tells you the points to consider in selecting
an apparatus. How to adjust same to various loca-
tions; gives the results of the latest scientific ex-
periments. Shows how to compute the number of
feet of pipe required for a given space; draft and
other important matters.

It is highly commended by Mr. John Thorpe and
others. Postpaid, 75c.

Sent on receipt of price. Address,

THE AMERICAN FLORIST IS STRICTLY A TRADE JOURNAL

DEVOTED TO THE BEST INTERESTS OF THE
FLORIST'S BUSINESS.

ISSUED WEEKLY, \$100 PER YEAR IN ADVANCE.

ADDRESS:
AMERICAN FLORIST CO.

54 La Salle Street, CHICAGO.

☞ Real Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTLEDS, Lawrence, Kan., president; A. L. Dos, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggitt, chairman membership committee, Withersfield, Conn.

MR. HUNTER, with the Albert Dickinson Co., sailed for Europe May 15 for a three-months' trip.

CROP REPORTS.—Nebraska seed crops are said to be looking well. Northern New York and Wisconsin lack rain.

Those Boston seedsmen who have so often promised to be present at the next convention will surely come to Hartford.

OTTAWA, ONT.—The Florists' Club here is in a bad way. It may almost be said that we now have no club.

LOWELL, MASS.—Florist A. C. Tingley was visited by burglars the night of the 12th, but luckily they were scared away before securing any plunder.

DETROIT, MICH.—Information regarding the coming chrysanthemum show of the Detroit florists may be had on application to Robert Flowerday, 460 John R. street.

You can give the AMERICAN FLORIST your fullest support by confining your orders to those who advertise in its columns, and when ordering mentioning the fact that you were induced to order by the adv. in the FLORIST.

News Notes.

GRIFPIN, GA.—The Middle Georgia Horticultural Society met here June 9.

ALLIQUENY, PA.—E. Ludvig recently returned from a visit to the florists of Cleveland and Detroit. He will soon open a new branch in the market, with wholesale and retail departments.

SPOKANE, WASH.—A very successful rose festival was held here June 11. Prizes were awarded for finest collection of roses, finest collection of cut flowers, finest single rose, most artistic arrangement of cut flowers and finest collection of wild flowers.

SERANTON, PA.—The partnership heretofore existing between Geo. W. Warner and J. H. McConnell has been severed by the death of Mr. Warner. Mr. McConnell has now associated with himself Mr. P. C. Langan, and the firm name is now Langan & McConnell.

SAN FRANCISCO.—At the regular monthly meeting of the California State Floral Society, June 12, a resolution was adopted "That we heartily indorse the movement on foot to separate the wine, brandy and horticultural industries of the World's Fair and the forming of two departments instead of one." This was telegraphed to the Director-General. The subjects for next meeting are "easily grown ferns" and "sweet-scented geraniums."

SALEM, OREGON.—The strawberry fair and rose show June 5 and 6 was very successful. In the rose classes prizes were awarded for single specimens of Baroness Rothschilds, La France, Papa Gontier, W. A. Richardson, Madame de Watteville, "Cloth of Gold," and best ten varieties, largest and finest display of named varieties, largest and finest display regardless of variety, twenty-five named varieties, best display of any one named variety, and best display of any single variety, the latter being awarded to a collection of La France.

CINCINNATI.—The season is now drawing near when the florists will be busy replacing their benches, getting ready for the fall trade. Such is the situation in Cincinnati at present. Quite a number of our prominent growers have been the victims of severe hail storms, some of them losing fully 90 per cent of all their glass, and without insurance. This will make no scarcity of cut blooms this fall, however, as several more of our larger growers were more fortunate, the storm doing them no damage. Owing to warm weather and numerous other reasons the Cincinnati Florists' Society has held no meeting, and the general impression now seems to be that we will have no chrysanthemum show this fall.

ST. LOUIS.—Some of the priests of the Catholic church have begun a crusade against floral designs at funerals. At a recent funeral Father Ziegler, of St. Malachy's church, demanded that the flowers be left on the outside of the church, claiming that they had no place in the last sad rites over a believer in the Catholic faith. According to the command the flowers and floral emblems were not taken inside the church, but were replaced on the coffin after the remains were brought back to the hearse preparatory to removal to the cemetery. This action on the part of Father Ziegler has created much talk and comment in Catholic circles, some even going so far as to say that the action was altogether unwarrantable.

PANSIES.

PANSIES THAT ARE UP. No need to worry over getting the seed to come up, it is up and ready to plant when I send them.

It is not only the plants that are up, the strain is up also; up to, and a goodly number of my customers say, above any strain in the market. The price is down, considering the quality of the strain, seed as good would cost you about as much per 1000 plants. My price is \$5.00 per 1000, or in lots of 2,500 and over, \$4.50 per 1000.

SEND FOR LIST AND SHORT PAPER ON CULTURE.

PLANTS READY AUGUST 30th TO DECEMBER 1st.

SMILAX.

Plants ready July 1st and later. These will be nice and stocky, and ready to go right ahead. There is some 40,000 here; let me have a chance to fill your order.

Send 10 cents for samples and get my prices before ordering elsewhere.

WILSON BROTHERS, SPRINGFIELD, OHIO.

Moorish Turf.

The keeper of the Moor's cafe, in a park near Moscow, Russia, has sowed the bare places in his garden with a mixture of summer-flowering annuals, which has made a brilliant effect and has been given the name Moorish turf. A firm of seedsmen is now offering mixtures of suitable kinds of flower seeds with that of perennial grasses. One mixture is as follows: *Barbarea aurea*, *Gilia tricolor* and other varieties, *Clarkia pulchella*, *C. elegans*, *Collinsia bicolor*, *Convolvulus tricolor*, *Crepis*, *Leptosiphon*, *Linaria*, *Linum*, *Lupinus*, *Malope*, *Nemophila*, *Nigella*, *Reseda*, *Portulaca*, *Saponaria*, *Silene*, *Centaurea*, *Eschscholtzia*, *Iberis* in variety, and *Papaver Rheas* vars.

"Floral Ingenuity."

In a certain florist's shop on the Bowery, crowded in among the numerous festive and funeral designs which are temptingly displayed with a view to beguiling the unwary passer-by into purchasing, is one monument of floral ingenuity truly awful. It is a baby's high chair made of white immortelles. Upon the back of the chair, in purple flowers, is the word "Baby," upon the seat is the inscription "Vacant." Doubtless as soon as there occurs an appropriate bereavement in the family of some Bowery aristocrat it will be removed from its present quarters to cheer up the hearts of the mourners.—*New York Recorder*.

Is He a Professional?

A machinist who works at his trade every day, owns and operates a greenhouse as a sideline, but does not depend upon the same as a means of livelihood. Should he be classed as a professional florist?

We have quite a number here of the description noted and the question has frequently arisen as to what class they should compete in at our exhibitions. Would like the opinion of the readers of the FLORIST. C.

Water Hyacinth.

— BY THE —

CALIFORNIA STATE FAIR OF 1890.

This preparation is a sure destroyer of the Scale, Woolly Aphis and Insect Pests of any and all descriptions. It may be as freely used in the conservatory, garden and greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportion. It is Safe, Sure and Cheap. No fruit grower or florist should be without it. Send for circulars and price list.

NARCISSUS. FOR FALL DELIVERY 1891.

My Special Trade offer of all the leading kinds may be had on application. I have an **IMMENSE STOCK**, probably the **LARGEST IN THE WORLD**. All the leading popular varieties, especially the **MARKET** kinds, to which I pay special attention.

My stock of **DOUBLE DAFFODILS** is remarkably fine, and is recognized by both the American and European trade as being one of the **BEST STOCKS IN THE MARKET**—all of the true deep yellow old English variety, and not the dirty green kind which has been foisted on the market the last few years, and which is of no use to anyone either for forcing or cutting. To ensure this stock you **MUST ORDER EARLY**, as many late orders I was unable to fill last Fall, owing to the increasing demand for this valuable stock. **GOLDEN SPUR, OVBALLARIS, RUGILOBUS, MAJOR, PRINCES, MAXIMUS**, and many of the best yellow Trumpets I can offer upon very advantageous terms. All guaranteed true and carefully graded. **SEVERAL ACRES** of Early White, Late White, and Double White Poeticus. My stocks of these are enormous, and I can fill orders to any extent and at very low rates.

Of the newer varieties, I grow only the best, and these in large breadths, and can offer **HORSFIELD, EMPRESS, SIR WATKIN, BICOLOR, GRANDIS**, and all the best of the two colored Trumpet varieties, in fact I can offer every good variety that may be considered worthy of cultivation. Also all the best varieties of the **INCOMPARABILIS, LEEDSI, and NELSONI** groups; many of which are of undoubted merit, both for cutting and general decoration. My list also contains many other Miscellaneous Bulbs, and before placing your orders you should see my New Catalogue. The stocks are true, and thoroughly well graded; prices low, and will compare favorably with any English or Continental house.

In addition to above will be found a select list of **LILIES, IRIS and PÆONIES, PYRETHRUMS, BEGONIAS**, and a most unique collection of **HARDY PERENNIALS**, including all the best in cultivation and many other plants not offered by any other house. It also contains a full description of the **NEW PINK, HER MAJESTY**, the greatest novelty of the season, and which I purpose distributing for the first time during the Fall of 1891.

THOMAS S. WARE,

HALE FARM NURSERIES,

TOTTENHAM, LONDON, ENGLAND.

PRACTICAL TESTS.

UNIVERSITY OF CALIFORNIA,

AGRICULTURAL EXPERIMENT STATION,

BERKELEY, AUGUST 22, 1889.

MESRS. MORRIS, LITTLE & SON, BROOKLYN.

Gentlemen—In regard to the sample of Insecticide submitted by you for trial, I beg leave to state that the preparation has been used on the University grounds with the following results: First, four ounces of the Insecticide were added to one gallon of water and applied to woolly aphids on apple trees with a spray pump. The insects were killed wherever touched by the wash, the result shows plainly that the material is effective wherever contact with the body of the insect can be made. Second, one-half ounce of the Insecticide was added to one gallon of water and application made by spray to the greenfly on rose bushes. The insects were killed on all sprigs reached by the spray. The amount of material submitted for experiment was too small to admit of large scale experiments, which would be desirable.

Very respectfully,
E. J. WICKSON,
Assistant Superintendent Agricultural Grounds.

FLUSHING, L. I., June 25, 1889.

Dear Sirs—I have found your Little's "Antiseptic" very efficacious in destroying the insects injurious to plants, without affecting the plants in any way. I regard it as the best insecticide that I have used, and I would not be without it. It is easily applied, very effective, and can be used with safety. Yours truly,
JOHN HENDERSON CO.

459 FIFTH AVE., NEW YORK, JAN. 12, 1891.

Dear Sirs—We are most willing to testify to the good quality of "Little's Antiseptic." It is the best and most effective insecticide we have ever used, and we can send us another 10 gallons. Yours truly,
SIESRECHT & WADLEY.

QUEENS, N. Y., Jan. 8, 1891.

Dear Sirs—I have been using Little's "Antiseptic" since last September and have no hesitation in recommending it as by far the best Insecticide I ever used. While it is sure death to all insects, there is no trace of the compound left on the foliage of plants. Please send us 5 gallons more at your earliest convenience. Respectfully,
W. C. WACKAY,
Foreman V. H. HALLOCK & SON.

PHILADELPHIA, PA., Dec. 3, 1890.

Dear Sirs—I have been using your "Antiseptic" for several months for washing Palms, to destroy scale, and I find it valuable for that purpose. Respectfully,
JOHN BURTON.

1287 BROADWAY, BROOKLYN, N. Y.

Dear Sirs—I have used Little's Antiseptic for Mealy Bug and must say that it is the best remedy I have found to do the work effectually, having used various other insecticides before without good results. Respectfully yours,
W. C. KNUCK.

Hunting Orchids in 1890.

The current number of *Lindena* contains a striking illustration of a new odontoglossum—a remarkably handsome, heavily reddish-purple spotted natural hybrid of the crispum type, found by M. F. Claes in New Grenada last year, and named in his honor. Notwithstanding the extreme vitality of *Odontoglossum crispum*, M. Claes states that though formerly diffused in abundance over a considerable part of New Grenada, it is becoming more and more rare, and soon it will be impossible to find any.

"For the search," says M. Claes, "one generally divides his men into groups of five to ten in number, each company collecting separately on the borders and openings of the forest. *O. crispum* (Alexandrae) is generally met with in the glades of the forest, or spaces cleared by the fall of some old tree. It prefers to grow on the tree trunks, rarely on the branches, and then only on the largest ones. It is collected with difficulty, because the natives show a great repugnance to climbing the trees on account of the scorpions and the thousands of insects which are hidden there, and particularly the ants, whose sting is very sharp.

"One is, accordingly, generally restricted to the single recourse of felling the trees, though this is not always an easy matter. The whole of a day must sometimes be taken by four or five men working together, and when the work is finished and the collector looks for his treasures, he sometimes perceives that they have not discovered any of the precious orchid, and that all his efforts have been thrown away.

"The harvests are much less fruitful than formerly, and may be estimated, under ordinary conditions, at twenty or twenty-five plants per day, with ten men. How much more numerous they were five years ago!

"After the plants are collected they are placed under a tent in a place carefully arranged to serve as a sort of headquarters. They are then cleaned and wiped thoroughly to remove every trace of humidity, which induces rapid decay. Lastly, when a sufficient quantity is collected and the journey is finished, they are packed up in cases, placed on the backs of mules and transported to the port of shipment. The journey occupies about five days, under ordinary circumstances and in the favorable season; but it is always necessary to reckon with unforeseen circumstances, and especially rains, so abundant in these regions, and which transform in a few hours the most gentle streams into impetuous torrents. It is also sometimes necessary to throw artificial bridges over the swollen water courses, and to carry the cases over to the other bank, while the mules, relieved of their burdens, pass over as best they can by swimming.

"The point of departure of the vessels is the town of Honda, in the State of Tolima, and in following the course of the Magdalena River, they next arrive at Barranquilla, the point where the river divides into two branches, the Upper Magdalena and the Lower Magdalena, and forms very dangerous rapids. Here the cases are transferred to the railway and conveyed by it to Savanilla, where they are embarked by the transatlantic steamers to their European destination.—*The Gardening World.*

EXCELSIOR STANDARD FLOWER POTS,

With Patent Ventilated and Perfect Drainage Bottom.

CARD. We beg leave to call your attention to our EXCELSIOR STANDARD POTS. You cannot well afford to be without them, as they are especially adapted for growing Chrysanthemums and all valuable plants.

FIRST CLASS CERTIFICATE OF MERIT AWARDED WHEREVER SHOWN.

We still carry in stock a full line of the regular "STANDARD" POTS.

When writing for price list state sizes and quantity wanted.

Price List sent on application to

THE WHILLDIN POTTERY CO., 713 & 715
WHARTON STREET, Philadelphia, Pa.

STANDARD FLOWER POTS

We have the following large Hand-Made Flower Pots slightly damaged, that we will sell in one lot at a low price, to make room for perfect goods:

150.....	12-inch.	40.....	18-inch.
50.....	14-inch.	30.....	20-inch.
50.....	15-inch.	20.....	22-inch.
75.....	16-inch.	25.....	24-inch.

A. H. HEWS & CO., CAMBRIDGE, MASS.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
2 1/8-inch.....	3,000.....	250 lbs.
2 1/2 ".....	2,400.....	250 "
2 3/4 ".....	1,750.....	250 "
3 ".....	1,450.....	250 "
3 1/4 ".....	1,200.....	250 "
3 1/2 ".....	800.....	250 "
4 ".....	600.....	250 "

It will be seen at a glance, that our pots are one-third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **BE SURE FOR PRICES.**

ANNUAL ROSE AND STRAWBERRY EXHIBITION.

Almost an entire week of rain ending up with a spiteful downpour on the day and night immediately preceding the opening of the exhibition; this was the discouraging condition of things attending this most important event.

How it came to pass that there were any roses at all that were not battered to pieces or any strawberries that were not rotted through and through is inexplicable, but somehow or other the busy exhibitors managed to turn out enough so that when at noon on Tuesday, June 23, the show was opened to the public, there was quite a respectable display for them to examine and admire. The weather, as if to atone in part for its bad behavior of the preceding days, cleared up beautifully and during the two days of the exhibition could not have been much better, so that the conditions were good for a large attendance and the financial results were therefore quite gratifying. The lower hall was as usual devoted to the strawberries, early vegetables, etc., with a fringe of miscellaneous floral collections around the sides, while the upper hall was given almost exclusively to the display of roses.

The Theodore Lyman premiums for twenty-four distinct named varieties of hybrid perpetual roses, three of each variety, were awarded to Jos. S. Fay, John L. Gardner and W. H. Spooner, as first, second and third respectively.

The regular prizes for sixteen, twelve and six varieties were all captured by J. S. Fay, who also took first prize for three varieties, Dr. C. G. Weld and John L. Gardner receiving second and third. For twenty-four varieties, one bloom of each, J. B. Moore and Son were first, John L. Gardner second and W. H. Spooner third. On twelve, six and three specimens premiums were awarded to Dr. C. G. Weld, N. T. Kidder, J. S. Fay, Wm. Patterson, Jos. Brierly and others. For a general display filling one hundred bottles there were five premiums offered, which were won by Mrs. E. M. Gill, J. L. Gardner, Norton Bros., E. Sheppard & Son and F. B. Hayes respectively.

The premiums offered for new varieties introduced since 1888 strangely enough brought out not a solitary competitor. There was quite a hot contest over the silver cups offered by Alex. Dickson & Son, of Belfast, Ireland, for the best twelve Ulrich Brunners, and J. S. Fay was winner of the first and John L. Gardner, of the second.

The special prizes for six Baroness Rothschild were awarded to Wm. Patterson first and F. B. Hayes second, and for six Mme. Gabriel Luizet, to F. B. Hayes first and Dr. C. G. Weld second.

On moss roses J. S. Fay was first, J. B.

Moore & Son second and J. L. Gardner third.

The roses on the second day of the exhibition were of much better quality than on the first day, the fine weather having brought out an improved crop.

The competition on Sweet Williams was quite animated. E. Sheppard & Son received first premium for an unusually fine collection and F. S. Davis second. T. C. Thurlow's collection of peonies and J. H. White's tuberous begonias were very creditable. Temple & Beard showed a large collection of hardy herbaceous flowers, which was specially noticeable for the neat and distinct manner in which everything was labelled.

From Ben. Grey came an interesting group of aquatics which included such rare varieties as Nolumbium speciosum vars. roseum, album grandiflorum and album striatum, Nymphaea marliacea chrometella and marliacea var. albidia, Nymphaea gracilis and N. pygmaea var. helveola.

A resplendent group of orchids occupied the space in front of the stage in the upper hall. The larger part of these was from E. W. Gilmore and contained a number of beautifully bloomed and healthy looking plants, most noticeable among which were a superb Phalenopsis grandiflora, a grand variety of Cattleya Mendelli and good specimen plants of Epidendrum vitelinum majus, Cattleya Mossiae and Odontoglossum Pescatorei. John L. Gardner showed some good orchids also, including a well bloomed Cattleya Gaskeliana and Dendrobium Bensonea.

Among the special attractions of the show was a fine specimen of the lace plant, Oxivandera fenestralis from C. Vanderbilt. This was exhibited in a large tub with incandescent lights under the water, by which means the delicate formation of the leaves was beautifully shown. To this plant a certificate of merit was awarded. A certificate was also given to C. R. Winthrop for three fine plants of the Bend Plant, Nertera depressa.

R. C. Winthrop also secured first prize on six plants of gloxinia and six tuberous begonias.

Honorable mention was given to a new seedling Rhododendron maxima, shown by the Bussy Institution.

W. C. Strong showed a very fine group of seedling perennial delphiniums and a collection of twenty-five Japanese maples, which were much admired.

Among the visitors to the exhibition were Wm. Grey, of Albany, N. Y.; A. T. Boddington, Short Hills, N. J.; and J. S. Cowles and Richard Gardner, of Newport, R. I.

WM. J. STEWART.

IT IS SAID that Washington and Baltimore will work together to secure the 1892 convention of the S. A. F. for one or the other of those cities.

Mr. John Burton has just planted a house of a rose which is sure to become popular when better known.

It is a *sport* from American Beauty. It differs from its parent both in leaf and in the color of the flower. In color it is much lighter than the Beauty. It is a lively pink, without the least suggestion of purple.

Mr. Burton had about a dozen plants on trial last winter, and I watched it very close. With age the flower takes on a lighter hue, but in no instance did I ever notice any indications of that purple shade which is so common in an *off* colored Beauty.

I cannot call to mind any H. P. rose to compare it with as to color, but any person who is interested can see it for themselves next winter, as there are some 500 or 600 plants already in position, for a full and fair trial for next season.

Mr. Burton confidently asserts that it will prove more valuable and useful than either Duchess of Albany or Waban, both of which are sports from old established and standard winter flowering sorts.

Some people would call this piece of good fortune *luck*, but we must not forget that only a keen observer could have secured this precious prize.

EDWIN LOSSDALE.

Long Island Notes.

BY WM. FALCONER.

HOLLYHOCKS.—If you have a stock of good doubles, and the disease bothers you, let your plants ripen and drop their seeds, and if the ground about the plants is clean, loose and mellow, you will soon have a bigger stock of seedlings than you could raise did you save seed and sow them indoors, and with far less trouble.

IRIS KEMPFERI in variety is in bloom. Nothing in the garden is grander. Mr. W. R. Smith, of the Botanic Garden, Washington, when walking among ours the other day, wished me to suggest a new name for them; it was Poor Man's Orchids. And well he might, for they are large and showy as orchids and anybody can grow them.

MANY BLOSSOMS.—Without flowers we cannot have fruit or seed. In the case of trees and shrubs generally a superabundance of bloom is a poor sign of fruit, and this is very noticeable this season in the case of *Xanthoxeris sorbifolia*, *Styrax japonica* and some others which have had extraordinary crops of blossoms, but very little seed is set. Fruit trees, however, are showing well.

ROSE BUGS.—Mr. E. S. Carman finds that water at a temperature of 123 degrees sprayed over the bug infested plants kills the bugs without injuring the plants. This is good news. But as the very air is full of the bugs the operation would have to be repeated hourly to be effective. What we want is an insecticide to spray upon the plants to render them bug proof without injuring the plants.

MIMULUS EMPEROR, a novelty of this year, has been in bloom for some time. It is a hose-in-hose, or duplex flowered variety, said to be brighter in color and more distinctly spotted than the old form. Maybe it is, but there is yet much room for improvement in the size and brightness of its flowers.

VIBURNUM DILATATUM is a Japanese hardy shrub that blossoms early in June. Mr. James Dean, of Easter plant fame, saw it here when it was in flower, and commented: "Of all the things you have got in bloom that's the shrub that takes my eye." His eye was after a new plant for Easter. Still I cannot recommend this *viburnum*, because, like most *viburnums*, its blossoms last only a short time in good condition, and they don't smell pleasantly. On account of its extreme floral profusion, if you hit it right as to time, success would be assured, but miss it by a day or two and your fondest hopes would be blasted.

AZALEA VERRY-ENEANA, page 611.—Mr. Dean calls my attention to the fact that it was from Mr. Maenhout Van Melle, not from Mr. Vervaeke, he bought his azaleas, and that it is Mr. M.'s son who is at work for him taking care of them.

FUCHSIAS.—Catalogue men do a big business in them yet, but florists who grow them into nice blooming stock for market report almost no demand at all for them. And this inappreciativeness seems general.

GOLDEN YEW AS BEDDING PLANTS.—Try them. Among yellow leaved plants, hard to grow, I know of nothing this day so brightly and beautifully golden as these golden yews. They are evergreen shrubs, dwarf, compact, and perfectly hardy with us; they are easily raised from cuttings in fall, and from the time they are two years old forever afterwards they are available for bedding or other garden purposes. We can have them in little balls, cushions, pyramids, or any other forms we please; they are perfectly dense, and need no unsightly pruning in summer. Use them for panels or as single plants studded into your mosaic flower beds. Yews of all kinds are easily transplanted, and if carefully handled you can lift and transplant them every year without impairing their beauty or visibly checking their growth, for they form large mats of fibrous, fleshy roots.

Show Pelargoniums.

For spring blooming in the greenhouse these pelargoniums are among the most showy plants one can grow, and for certain lines of trade they also are valuable. But there is no doubt of one thing, namely, that there is a lull in their popularity. I grow a lot of them and aim to have them in fine form and to come in with the calceolarias in April and last till June, and for this purpose use young plants, that is plants raised from cuttings the previous summer only.

A lady and gentleman, members of McAllister's 400, were here some weeks ago when these pelargoniums were in full bloom. The lady remarked, "I cannot bear the sight of those plants" and the gentleman said, "it always gives me pain to look at them," but another lady who was with them told me she "didn't dislike them at all, indeed, I think they are just lovely." And so opinion runs.

Our market growers raise quantities of them as pot plants in bloom for the spring trade and private gardeners still stick to

them. And Mrs. Berger of California at the last convention told me that these pelargoniums were among the most desirable plants for the Pacific coast trade.

To the mail florist they are invaluable. But let me advise you to get them into your fall catalogues more than into your spring ones. Nice little plants sent out in the fall and potted on once or twice during the winter or early spring will give your customers lovely flowering specimens for April and May. On the other hand little plants sent out in spring are not apt to bloom till the following year. Encourage your customers and keep up their enthusiasm; it will revert to your own pocket after a while. In spring you can always pick up something in the seed line as well as the plant line for novelties for nature starts gardening then and everybody is enthusiastic; but in fall outside of the stereotyped bull list it often is hard to get good seasonable stock to offer. Now try show pelargoniums and *Cytisus canariensis* and its varieties and rest assured you are sending out good things at the proper time.

Show pelargoniums are of the easiest possible cultivation. After blooming cut back the plants pretty well, keep them in an airy, slightly shaded greenhouse or frame or stand them in a sheltered corner out of doors, water them sparingly and let them break slowly. Use the young shoots for cuttings. From indoor or frame plants cuttings strike freely, from outdoor ones not so readily. After the cuttings are rooted and potted give them plenty of room and nip in the growths to make them stocky. Never be too free with water and don't wet them overhead very much and not at all when in bloom. These pelargoniums dislike bright unrestrained sunshine.

Varieties are legion. I like Mme. Thibaut, a strong variety with immense trusses of pink and white flowers; Mme. Gustave Henry, a white flowered form of the last; and Mme. Vibert, also in the same style but with very dark colored flowers. For market pot plants the dwarf compact race of which *La Vesuve* is a good type should also be grown.

W. F.

Pyrethrums.

Appropos of my recent notes in the *FLORIST* about pyrethrums, a florist in Wisconsin writes me:

"I have the double white as large as a gourd as yet now (May 30), coming into flower, but it never comes till June in perfection. It will grow and blossom in the greenhouse. What kinds are they that come into bloom for Decoration day? We have been crazed for flowers the last two or three days, for to-day, the 30th."

* * * It will grow in clumps for two or three years and then generally dies of heat in summer. I can't propagate it except very early in spring out doors; it won't stand the greenhouse heat."

In order to have pyrethrums, phloxes, monardas and other heavily personate plants that grow in tufted clumps in their most vigorous condition, they should be lifted, divided and transplanted every second year; sometimes being transplanted annually is better for them, and, again, many may grow for years without being disturbed, and remain in good condition. Fibrous, shallow-rooting plants need dividing and transplanting oftener and tuberous and deep-rooting plants to be let alone longest. By their overcast or spreading appearance plants speak for themselves when they should be transplanted. Pyrethrums may be lifted, di-

 4 Princess Victoria

NEW SHOW PELARGONIUMS. CONSIDERABLY REDUCED IN SIZE 17

vided and replanted with safety after the first good soaking rain, about the end of August or in September, and have plenty of time to establish themselves before winter sets in. But early spring is the most natural time for dividing the plants

then growing and rooting is natural, and if done early and carefully and the weather is moist at first, every division should make a good plant.

So far as getting them into flower at Easter is concerned, I get them in then

with no trouble whatever. Like hardy plants in general, pyrethrums must have a long and decided resting period. Lift and pot them in September, and plunge them in a cool place, and winter them plunged in a cold frame, and bring them

into a carnation house in March, a little earlier or later, as Easter may occur, and they will start into fresh growth and blossom quite kindly. Don't force them. Any of the pyrethrums will do this.

W. F.

Davallias.

Several of the members of this interesting and somewhat extensive genus may well be included among those termed useful ferns, their graceful form and free habit of growth being strong points in their favor.

There is also considerable variety to be found in this genus, both in size and shape, some of the species being well adapted for large exhibition specimens while others are small enough to be accommodated in the most limited collection, and many of them are charming when grown as basket plants.

The latter method may possibly find an opening for more ferns as the trade advances (that is ferns grown in baskets), and the davallias will undoubtedly be remembered as such demand arises.

This genus is quite widely distributed, and as a natural consequence the needs of all the species are not alike, but those to which reference will be briefly made in the present notes are all such as will flourish under ordinary treatment in a temperature of 55 to 60 degrees.

The propagation of these plants is effected in the usual ways by division and by spores, some of the latter coming up very freely, while others produce but a limited quantity of young plants, and from which it would seem that these spores sometimes produce an imperfect prothallus, in which fertilization is not completed and in consequence the prothallus dies off instead of continuing its growth into that of a perfect plant. Such a condition may however be merely apparent and not real and is therefore open to doubt.

Undoubtedly the finest of all the davallias is a large specimen is *D. pallida*, better known under its synonym of *D. Mooreana*, its finely divided fronds frequently attaining a length of three to five feet, the color being pale green and the entire plant of very graceful habit. This species is also very pretty in a small state and the fronds last fairly well when cut and placed in water.

The next to this in point of beauty as a large plant is *D. Fijensis*, which is also of strong growth, the rhizomes being frequently as thick as a man's finger and so stiff as to make it somewhat difficult to keep them within the bounds of a pot or pan. The fronds are very dark green in color, finely cut and gracefully arched, the stems being quite stout and clothed with whitish scales or chaff, as are also the rhizomes. Seedlings of this species make both pretty and useful plants in three or four-inch pots and if well grown will stand considerable exposure.

Perhaps the most popular member of the family under consideration is *D. tenuifolia stricta*, now a very well known fern in the trade from the immense quantities that have been distributed of late years. It is comparatively dwarf in habit, the fronds semi-erect and four times divided, dark green in color and frequently having reddish stems, and as a small plant is used with good effect in dinner table work and for window ferneries, though the fronds are somewhat brittle withal.

D. canariensis, though one of the oldest and hardest of the genus, is not so often seen. It has stout rhizomes densely cov-

ered with chaffy scales, and in fact is the original species to which the common name of "Hare's Foot Fern" was applied, though the latter designation is now given to the whole genus. The fronds of *D. canariensis* are bright green in color and triangular in outline, finely cut and of pleasing habit.

Among the more moderate growers *D. dissecta* deserves recognition, it being of rapid growth and making a compact plant with dark green fronds that are quadripinnate in form. This species is an excellent subject for basket culture and also is satisfactory on a fern-pan.

Another that should not be omitted is *D. pentaphylla*, a very distinct and pleasing species, and though not new, yet does not seem as wide-spread as its merits deserve. The fronds of this species are of moderate size, seldom more than a foot long, and pinnate, usually consisting of two or three pairs of pinnae and a terminal segment, the color being dark green and the entire surface glossy. The foliage of *D. pentaphylla* keeps in good condition during winter, and forms a pleasing contrast with that of finer divided species.

Of very small species there are several, one of the prettiest being *D. parvula*, which has slender rhizomes and tiny flabellate fronds of dark green color, the latter being seldom more than two inches high, and produced in a compact, little mass. This is decidedly a miniature fern, and does best in a moderately warm house with plenty of shade.

Another of similar character is *D. alpina*, but having coarser fronds and not so compact in habit as the preceding.

Others of value in this genus are *D. affinis*, which may be said to belong to the same section as *D. decorata*, these having dark green fronds of lasting quality, and about one foot in length, produced from surface rhizomes, and *D. elegans*, the latter bearing some resemblance to *D. dissecta*, though coarser and abundantly distinct therefrom.

W. H. TAPLIN.

Holmesburg, Pa.

DAVALLIA FIJENSIS

Azalea Deutsche Perle.

Regarding this useful white azalea, which we illustrated some time since, the *Gardening World* says:

"The azalea here named is a variety of *Rhododendron indicum*, popularly known as azalea. It is of continental origin, as the name would imply, like so many others, but its own intrinsic merit has enabled it to make rapid headway in British gardens. Where much forcing of flowers has to be done there we find it to a certainty, and it has also found its way largely into market gardens, owing to the many purposes to which it can be put when cut. Some have found the plant not to be of very vigorous constitution in suburban gardens, but with healthy specimens to begin with and care in its culture, particularly when making fresh growth, there is no difficulty in getting perfect satisfaction from it. The statement is sometimes made that the flowers are only of moderate size; but that should be an advantage rather than otherwise, for flowers are often overdone in the matter of size. The striking features of the flowers are their purity of color, the broad rounded character of the segments and the comparatively small number of pieces that go to fill up the center of the bloom. On this latter account the flowers are double without being crowded, or presenting a packed and crushed appearance. For this reason it takes precedence over several other double white varieties that present some defect or other. The substance of the flowers is also good, enabling them to keep in perfection for some considerable time, particularly if the latter are cut with a few inches of stem."

Primula Sinensis Var. Pallanze.

An illustration of this new primula appears in a recent issue of *Moeller's Deutsche Gaertner Zeitung*. The foliage is very deeply fringed and very ornamental, and this strain is said to have a wide

DAVALLIA PALLIDA (MOOREANA).

range of color in the flowers, including white, pink, violet, carmine, light and dark red, and bluish, some of the flowers displaying a large gold-brown eye, sometimes so large as to leave only a narrow colored margin or border.

The wider range of color and the handsomely fringed foliage are the advances claimed for this strain over that introduced a few years since, and which lacked an extended variety of colors and had plain, smooth, lacinated or dentated leaves.

It is being introduced by Messrs. Hillebrand & Bredemecier, Pallanza, Italy.

Catalogue Making.

That seedsman or florist who from chance or through necessity seeks trade beyond his own neighborhood, and appeals to other customers than those he can personally serve and bind to him by friendly converse over his own counter, must have a catalogue. He alone or his clerks can sell to or supply advice to but one person at a time, but each of his well-made catalogues can also fairly serve a customer, and such a catalogue, though it be the cheapest or dearest, is much less expensive than any clerk. It may answer many questions even as well as the proprietor, and can be economically multiplied. I may claim that even the grower or dealer, who is satisfied in serving well his local trade only (would there were more) and is content with its moderate, though certain, livelihood, could profitably issue a pamphlet or primer containing much primary instruction to which many

of his questioning customers might be politely referred, as a copy is presented to them. The more advertising in it the more profitable its circulation, but certainly the information would thus be more thoroughly and accurately given than when given verbally over the counter, and much valuable time saved.

To all those, however, who would go beyond their own counter, a descriptive list is necessary. This book, even if small in size, to be most effective, must in my judgment be descriptive, if not of all stock, then of some few plants, or of one, which must be interestingly told about. If more, of course better, but if space or means do not permit, other items can be named only, omitting descriptions. In size, style, illustrations, etc., I believe the best to be the usual standard of this class; good paper, a good-sized page—do not try to reform fashion with small or odd sizes; one of the oldest and largest firms in the country gave this up after four years' disastrous trials; don't begin it. Don't put too much on the cover. Get your name or—Peter, if it is Peter; John B. is better than J. B. A handle like this is a good thing for your customers' memory to hang to, even if A. T. Stewart didn't need it. All are not Stewarts nor all Astors, who need no signs on their doors. You need to begin early to win that way, and nowadays all of us haven't the time. Next, use two or three general names of what you sell, plants, flowers, seeds, rather than the name of your business, florist or seedsman, and finally the name of your city. It helps fix you and your business in the minds of

your customers. I once knew a Canadian firm to print a large catalogue and omit the name of their city.

If this is to be a book of but few pages, some good thing of your stock or several of a class must be favorably described and illustrated (if possible) on the first right hand inside page. Circulars are so common now that unless a strong bid is made for favor the moment the cover is lifted there is much danger in the direction of the waste basket. One other chance exists to hold attention, namely: Cultural notes or instruction of value. I believe the wise maker of the small catalogue of the future will devote the lower one-third or one-fourth of each page to pertinent and readable instruction in catchy type. Such a book presented in season will be saved. The following pages, as I have said, may be plain lists of stock, but if means permit, everything offered should be described, and of those illustrated at least one good one on each page should be of good size, never small—it is not the fashion. Don't reform the fashion until you get further on. Everything described and each size of it should be given a technical name or title by which it may be ordered. For instance, "Rose Dinsmore, price 20 to 75 cents," will not sell either size; but "Rose Dinsmore, first size, 2½-inch, each 20 cents; *extra large* plants from 5-inch pots, 75 cents." Will sell both. Customers will not mail you orders on uncertain offers. V.

YOU WILL benefit the FLORIST by mentioning it every time you write one of our advertisers.

November —, Germantown, Pa.—Chrysanthemum show Germantown Hort. Society. Thos. E. Meehan, Sec'y.

November —, New Haven, Conn.—Chrysanthemum show New Haven Chrysanthemum Club. Miss Frances S. Ives, Sec'y, 478 Orange street.

Principal Toronto Hotels.

NAME	CAPACITY.	RATE PER DAY.
Queens Hotel Headquarters, 78 to 82 Front St.	300	\$3.00 to \$4.00
Rossini House, King and York Sts.	250	3.00 to 4.00
Walker House, Front and York Sts.	250	2.00 to 2.50
Palmer House, King and York Sts.	250	2.00
Arlington Hotel, King and John Sts.	200	3.00 to 4.00
St. James Hotel, 15 York St. (opp. station)	50	1.50
Albion Hotel, Market Square	300	1.00
Ellott House, Church and Shuter Sts.	150	2.00
Hot'l Metropole, King and York Sts.	75	2.00
Avondale Hotel, Simcoe and Wellington.	50	1.50
Richardson House, King and Spadina.	100	1.50
International Hotel, Front and Simcoe.	200	1.50
Black Horse Hotel, Front and George.	125	1.00
Russell House, 215 Yonge St.	50	1.50
Power House, King and Spadina.	50	1.50
Schiller House, 120 Adelaide St. E.	50	1.00
Lakeview Hotel, Parliament and Winchester	75	1.50
Keach's Hotel, 30 King St. W.	50	(European)
Empress, Yonge and Gould.	120	1.00 to 1.50

The majority of the above hotels are in the business portion of the city, the center of which is about one and a half miles from the convention hall in the Horticultural Gardens. Street cars pass the doors of all of them, making communication between hotel and hall quite easy.

Members wishing to secure accommodation before hand will do well to communicate early with Mr. J. H. Dunlop, 1 McKenzie avenue, Toronto, Ont.

Colors as They Appear in Photographs.

Everyone who has given any attention to photographs has been surprised and oftentimes much disappointed at the unsatisfactory way in which colors are represented. If no thought is given to the photographic values of colors one is pretty sure to make mistakes as to background and other details. For example, if he should arrange a basket with dark blue flowers for a background and light yellow ones for a foreground, in the finished photograph he would find the blue flowers almost white and the yellow ones very dark, just the reverse of the effect hoped for and expected.

To all interested in the photography of flowers, unless they have absolute knowledge of the values of colors, I would suggest that they have some of the most common flowers photographed on a card, as seen in the illustration, as a guide that will save them much annoyance.

An analysis of the illustration may be interesting. The background was white paper. The petals of the field daisy are almost lost, and would be quite so were it not for the shadows they cast; the yellow center is quite as dark as the Crimson King carnation. The Buttercup carnation and Perle rose show different degrees of darkness. The La France is almost white and the Albany shade darker, true to their natural value. The same may be said of the Niphetos and Bride. The Portia carnation comes out nearly as dark as the Crimson King. As a fact of general importance it must be borne in mind that blues come out almost white, purples a little darker and yellows darker still.

It is better to use Asparagus plumosus with light flowers than it would be to use Maidenhair ferns. For instance imagine a basket or bouquet of La France roses and Maidenhair ferns, which is a beautiful combination, but have them photographed and you have a lot of black spots on white roses. Asparagus would appear much better in the photograph, as the contrast would not be so marked. Maidenhair fern would hardly be seen on a cluster of Portia carnations. Heliotrope you will notice comes out quite light.

There is a process (Auto-Chromatic, I think) which gives the relative value of colors. The effect is very pleasant; for instance take an oil painting representing a brilliant sunset in yellows and reds, by the ordinary process it would be the darkest place in the landscape, but by the newer one the colors would have their proper values and the sunset appear bright. Comparison of pictures produced by the different processes is very instructive. I have asked a number of commercial photographers about the process, but they tell me that it is not yet practicable. I suppose the additional trouble and expense stands in the way of a general introduction. Several amateurs have told me that they have been quite successful in its use.

We have frequently had customers call for flowers that they intended to wear or carry while having their pictures taken. In such cases a knowledge of the photographic values of colors has been appreciated. H. H. BATTLES.

The Arrangement of Flowers.

Mr. F. Schuyler Mathews gives us something to think of surely in his recent valuable and interesting articles. To carry such ideas into execution however we must be free from the hampered methods

COLORS AS THEY APPEAR IN PHOTOGRAPHS.

surrounding our efforts as recounted by Mr. Anthony, and the like of which sad to state are too frequently with us. Can't the retailers get together by themselves at the convention out of session hours and in a meeting shed some light for each other's benefit in trying to overcome such circumstances?

Mr. Mathews is evidently unaware of the fact that buttercups and other wild flowers he mentions wilt so quickly when used with the stems out of water as to be useless to the florist. Beautiful as they are, pond lilies are not available for use at night and weddings are most frequently evening affairs, at which time the nymphs refuse to display those open visions of beauty they present in the day time. Cotton crowded down among the bases of the petals will keep them open somewhat but it don't work any too well and is unnatural.

What thickness of hempen rope would Mr. Mathews suggest for a lover's knot to be twin'd with flowers like Bride and Mermet roses and still have no tendency to clumsiness or stiffness? A. N. C.

Chicago.

Mr. Otto Ristow, of Bowmanville, who in previous seasons has been phenomenally successful with the American Beauty, met with complete failure the past season, not having cut a really good rose of this variety during the whole season, from a house 300x20. But he don't

propose to lay down, and will devote more space than ever to this rose the coming season. Mr. Ristow has invested in 1,500 plants of the Waban rose, which he will grow for cut flowers the coming season. The plants have done splendidly thus far, and promise well.

Mr. Julius Ristow, a brother and neighbor of the preceding, also grows the fickle American Beauty. He has met with moderate success for several years, attaining the best results the past season. This, in connection with the complete failure of his brother this season, the latter having heretofore excelled, is causing the wisecracks to scratch their heads in serious meditation. It would seem that the ways of this beautiful rose are past finding out.

Mr. William Werner, the caterer, has a penchant for dahlias, and now has a remarkable display on his grounds at 91 35th street in the shape of three dahlia plants in bloom at this early date. He states that the dry bulbs were planted out this spring and that they were not started early under glass.

Among recent visitors to the city were J. M. Jordan, of St. Louis; Mr. Bancroft, Jr., of Cedar Falls, Iowa; A. C. Wasson, Hoopeson, Ill., and H. G. Higley, of Cedar Rapids, Iowa.

It was expected that definite action would certainly be taken at the meeting of the World's Fair directory last Friday evening on the appointment of William G. Forsyth, of California, as chief of the

horticultural department, but the committee having the matter in charge, instead of reporting, asked for further time to consider the matter. The comments of the local press are to the effect that this does not mean any good for Mr. Forsyth. It seems to be pretty generally accepted that Mr. Forsyth is simply Mr. Maxwell in a new guise, and that if the former assumed control of the department the latter would practically direct its policy.

Owing to the fact that the date for the quarterly meeting of the Horticultural Society of Chicago falls on July 4, the meeting will be held the following Saturday, July 11. At this meeting Mr. J. A. Pettigrew, superintendent of Lincoln Park, will read a paper upon hardy plants. The meeting will be held at the Sherman House.

The ponds of aquatics at Lincoln Park are rapidly putting on their beautiful summer garb. In one of the lower ponds the Victoria regia is growing like a weed and several of the nymphs are already beginning to bloom. The nelumbiums are filling the center of one of the ponds with verdure and preparing for a burst of floral magnificence later on. Among the nymphs now in bloom are N. Devonienensis, N. Zanzibarensis, N. dentata, N. pygmaea and N. odorata rosea. In the upper and newer ponds, which are much larger and more naturally arranged, the tender sorts are not so advanced, but these ponds will have a charm of their own later on, for on their more naturally

disposed margins Mr. Pettigrew, who appreciates the beauty of our own wildlings, has colonized the choicest of the marsh plants he has gathered during his botanizing trips in northern Illinois and southern Wisconsin. And in the pond itself the yellow blooms of our native lupine are already opening. We shall endeavor to secure a good photograph of these ponds later to place before the readers of the FLORIST.

Our growers are busy now throwing out the old rose stock and replanting. It is noticeable that very few of them are attempting, as they have in former seasons, to carry over bench flowered stock for another season. Experience has evidently taught them the lesson that young, clean stock planted in June or July brings the best results.

We are looking for a better supply of good roses this summer than we have been having in former seasons. A number of growers here planted a couple of houses each with stock suitable for summer flowering, such as Beauties, La France, Perles, Meteors, and Niphetos. This venture will doubtless prove a paying one.

Prices are firm at last quotations.

Graduating exercises are practically finished for the season. Last week witnessed the closing of our public schools. The demand for baskets and bouquets for the occasion was quite active, but the supply of flowers was equal to the demand, with the exception of good red roses.

Speaking of red roses, there are practically none in the market. Jacqs, Gontiers, and Woottons, what is left of them, are perfectly worthless. But we are glad to see a few Meteors coming in, cut from young stock, which promises to be very fine. Meteor, by the way, whatever may be said against it, as a winter rose, is going to be the red rose for summer. The flowers we have seen here so far are of excellent color, and the plants from mid-west. Meteor is a good keeper, and as such will prove a favorite to the retailer. Why isn't this rose more widely grown for summer flowers?

Philadelphia.

Wanted: A new bottom for business, the old one having dropped out, and it will take about three months to repair it, at least that is the general impression hereabouts.

La France, Brides and Perles are now the leading roses, they are worth from \$3 to \$5 a hundred and are very poor.

Growers generally are busy tearing out the old stocks of roses and getting ready for the next season.

Messrs. A. L. Pennock & Son have recently constructed a rose house 200 feet long, almost entirely of iron and glass, the only wood used being in the cap or peak and the doors. The sills are brick on a stone foundation, all laid in cement. This house is furnished with their new counter balanced ventilator, which can be raised the entire distance at once by simply grasping the handle with the finger and thumb.

Mr. W. K. Harris has his new establishment well under way, five large houses are ready for the glazing. When completed this will be the largest range of glass in Philadelphia. Roses for cut blooms, carnations and pansies will occupy the benches the coming season. Mr. Harris makes a specialty of rubbers and his stock of all sizes is very fine.

Mr. Walter Coles has sold out his interest in the firm of Coles & Whitley to his partner. Since the partnership was ef-

fected some three years ago the firm has done a good business, but Mr. Coles is ambitious and in addition has contracted the western fever; it is a severe case. June 26 saw him depart for that wild and woolly region. We wish him success and shall watch eagerly for some word when he shall finally cast his anchor.

Myers Bros. are erecting a large house for carnations, etc. at Chestnut Hill near Messrs. Lonsdale and Burton.

The legislature having adjourned Mr. Burton can now be seen at home with his sleeves rolled up and at it just as hard as ever. John was never afraid to speak his mind when he thought he was right, but his "eyes and noses" are now very clear and distinct and more effective than ever.

We like the way those folks up in Toronto are talking. It looks like a good time. The necessary committees have been appointed by the Florists' Club to attend to transportation, etc., and we believe the Philadelphia delegation will be large and enthusiastic.

A new billiard table has been placed in the club room, which these hot summer days is the coolest place in the town. Anderson again won the medal in the bowling contest for June, with a score of 494 in three games. R.

Buffalo.

On Wednesday a modest but pretty church wedding decoration was arranged by Long, only wild fern clumps on their roots, wild Marguerite daisies and pink peonies being used. The critics called it lovely.

Since J. H. Rebstock occupies structures on some leased ground which are overtopped by horse chestnut trees and to the removal of which the property owner won't consent, he annually comes to the conclusion that double thick glass is cheaper than single. The former withstands the velocity of the dropping fruit without breaking, while the latter does not. Can't our indefatigable Esler come to the rescue in such cases with a chestnut pulp?

Last week during two days and for a consideration D. B. Long devoted his large eight foot show window in a line of fresh flower decorating to advertising a season of summer opera. It attracted the crowd on the outside.

Greenfield of Westfield has sent in some good spikes of *Brenchleyensis gladiolus* during the past few weeks.

A fine wedding decoration was made recently by Wm. Scott and D. B. Long. The former made a fine arrangement of palms and hydrangeas in front of the tall mirror in the parlor and which served as a background for the bridal party at their reception. Mantels were decked with roses and adiantums. A large crystal chandelier was draped with *Asparagus plumosa* with fine effect and the stair rail garlanded heavily with smilax and white blossoms. In the center of a large tent which served as a supper room stood the round bride's table ten feet in diameter. The center piece on this consisted of a two foot through center of white roses, circled with a band of adiantums in growing plants. Outside these in turn followed six sections, are shaped, on each side; so outward extending points were formed at place of their juncture. These sections were made up alternately of Brides and Mermets, and completed a graceful and harmonious effect. Over the table extended a chime of five floral bells, the inside of each being pink, the remainder

pure white. The walls of the tent were covered with a light pink tinted fabric. The white roof showed off to advantage the overhead decorations of laurel roping, which were used profusely. Bunches of pink peonies were placed at points of looping up the garlands at the sides of the tent. White and pink in colors, besides natural green only being employed, there was no clashing or quarreling of colors. A bold effect, in harmony with the large surroundings, and at the same time toned in style, was produced.

L. B. D.

Boston.

The annual grammar school festival occurred on Saturday, June 27, at Mechanic's Hall. Twenty-six hundred bouquets were presented to graduates under the supervision of the school committee. The stage was prettily decorated with hydrangeas and palms by Norton Bros. The twenty-six hundred bouquets, the contract for which had been divided up among a number of the florists, were arranged in a huge bank at the back of the stage, forming a most brilliant picture. Half the floor and the balcony sides were occupied by the graduates, seated in companies representing each school, while the remaining seats and all available standing room in the immense auditorium were all taken up by the proud fathers, mothers and friends. The presentation of the bouquets by the mayor was a most interesting sight. Music, ice cream, and dancing followed, and everybody was happy.

The cut-flower trade has been unusually good for the season, with a steady demand for everything of good quality in the rose line. Carnations and sweet peas are very abundant, and with white pond lilies form the principal stock in trade of the street fakirs at present. Pink pond lilies are in great demand, and have come to be one of the standard articles in the summer supply here. They are unusually perfect this year. Gloxinias, coreopsis, bachelor's button, sweet sultan and irises form a large part of the decorations of the florists' windows. These summer flowers are bright and attractive, and at the same time cheap. Smilax is once more plenty.

The regular weekly shows of the Massachusetts Horticultural Society commenced on July 11, and will be held every Saturday until August 29, inclusive.

A certificate of merit was awarded to J. C. Hovey on June 27 for a very beautiful peony, a seedling raised by John Richardson. The peony is called Milton Hill. Its color is a soft, delicate flesh pink.

W. J. S.

Toronto.

Convention matters are progressing favorably. All the principal hotels have been "seen" and arranged with, and a map of the city indicating their location has been gotten up and other matters in connection with entertainments, etc., are assuming definite shape.

I omitted to mention in my last communication that Mr. John Thorpe, of Pearl River, N. Y., had honored this city with his presence for the space of ten days and was for the greater part of that time the guest of our park superintendent, Mr. John Chambers. Mr. J. C. has been intimating Mr. J. T. into the mysteries of the city, and if I may be allowed to give those members of the S. A. F. who like a good dinner a hint, I should tell them to keep an eye on Mr. J. T. I suppose Mr. J. T.

will probably relate in the FLORIST, for the benefit of those who are anxious for information with regard to this country, his experiences in the wilds of Canada.

Mr. William Houston, gardener at the Central prison here, has gone in for aquatics this year, and has planted a circular pond over sixty feet in circumference with a lot of the choicest nymphæas, etc.

The flower show to be held in the Horticultural pavilion the 22d and 23d of July by the Electoral District Society promises to be the best of its kind ever held in the city. Perhaps some of our American brethren who do not live too far away could take a run across the line at that time. I venture to think that some of them would rub their eyes in wonder at some of the plants that will be exhibited.

About a dozen of the Toronto gardeners and florists took in the rose show at Hamilton on the 23d ult., which was under the able management of Mr. F. G. Foster. Some very fine collections of hybrid perpetuals were shown. Under the guidance of one rejoicing in the euphonious cognomen of Simon Peter Stipes the Toronto "boys" took in various other things, too, and had a good time generally. E.

Hamilton, Ont.

The Gardeners' and Florists' Club of this city held their first show of roses on June 23. Owing to extreme heat it was thought advisable to alter the date from the 29th, as announced, to the 23d. The show, although not a financial success, was such as to encourage the officers of the club to hold a larger one next year. The display of H. P.s was very creditable, comprising over 100 varieties, but Teas or indoor roses fell short, owing to the extreme heat. We had two very good show exhibits from Toronto, L. H. Dunn and Spears & Munton; both had very fair roses of the leading kinds and some first class carnations, especially the Wilders, flowers good and color grand.

The boys came up in force from Toronto; among them were our vice president, J. Chambers and A. Ewing, secretary of the G. and F. Club, of Toronto. The judges were Geo. Vair, of Toronto, and T. H. McKenzie, of Dundas.

The principal prize takers were, for 50 distinct H. P.s, 1st T. Burner, Hamilton, 2nd A. Goodall; 24 distinct H. P.s, 1st T. Burner, 2nd A. Goodall; 12 distinct H. P.s, 1st A. Alexander, 2nd W. Calder, 3rd J. Cape; 6 distinct H. P.s, 1st H. Berry, Burlington, 2nd Dr. Richardson, Burlington, 3rd A. E. Alexander, Hamilton. In Teas, J. W. Fox, gardener to A. G. Ramsay was the only competitor, taking 1st for 12 varieties. He also put up a very good collection not for competition. F. G. FOSTER.

The Society of American Florists holds its seventh annual meeting at Toronto, Ontario, August 18, 19, and 20 next. It will be a good meeting, and you ought to attend. Further, if you are not already a member of this society you ought to be, even if you cannot attend the convention. The society is working for the best interests of everyone in the trade. That includes you, and you ought to be a member of such an organization.

The St. Louis Florists' Club will give a chrysanthemum show November 11 to 13 next. Full information may be had on application to the secretary, Mr. S. Kehrmann Jr., 21 South Broadway, St. Louis, Mo.

Mr. ALFRED FORDER, Walnut Hills, Cincinnati, was one of the unfortunate whose houses were in the track of the recent hail storm. His loss was \$86 worth of glass, but as he had a policy in the Florists' Hail Association he has cashed a check for that amount, sent him by the treasurer of the association, and is now fixing up his houses. Mr. Forder writes that he is much pleased with the prompt settlement of his loss and can't understand how any florist can be so reckless as to go without protection when it can be secured at such a slight outlay through the medium of the association. He adds: "Could they see the wrecks around here just now they would not wait a minute."

CAN a grower produce good geraniums in four-inch pots, and make a living profit by retailing them at \$8 a hundred? In answering this please bear in mind that before there can be a profit the expense of marketing, interest on money invested, wear and tear on your houses and tools must be deducted in addition to ordinary running expenses.

THE Rhode Island Horticultural Society has issued a premium list for the chrysanthemum show next November. Copies may be had on application to the secretary, Mr. C. W. Smith, 55 Westminster street, Providence, R. I.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words an insertion). Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By single young man, as all-round greenhouse hand; steady and sober. G. SPENCE, box 55, Knoxville, Tenn.

SITUATION WANTED—By young man in florist business; well up in general greenhouse work. Address: N. H. J. Williams, N. Y.

SITUATION WANTED—As head gardener by a single man, age 37, who understands his business. First class testimonials. Address: J. J. Williams, N. Y.

SITUATION WANTED—A live young man wishes to obtain charge of sale place; 12 years' experience, last two growing for the Boston market. Well recommended. Send particulars and receive salary. P. O. Box 81, Brookline, Mass.

SITUATION WANTED—As florist or nurseryman. S. Can do all kinds of nursery work in all its branches, such as budding and grafting. Able to take charge of men; 20 years' experience. Address: H. M., care American Florist, Chicago.

SITUATION WANTED—As foreman in a place where roses are wanted. H. P.s and teas of first quality, and florist stock in general. Sober, honest and capable. Address: O. D. H. Hort. Hall, Broad St., Phila., Pa.

SITUATION WANTED—By experienced florist, to take charge of private or commercial place; thoroughly experienced in all branches. Age 29. First class references. Address: J. J. Williams, N. Y.

SITUATION WANTED—By a first class florist; German raised; good rose grower; experienced in greenhouse plants, orchids, palms and ferns. Best of reference for commercial work. Address: J. B. and A. N. Boet, 100 Bromfield St., Boston, Mass.

SITUATION WANTED—As head gardener, by a German; single, age 33; experience of 23 years in propagating and growing roses, carnations, stove, and bedding plants; would take commercial or private place; can furnish good references. Address: O. E. care Williams & Co., 100 Bromfield St., Boston, Mass.

SITUATION WANTED—By a practical gardener, manager or head in private or commercial place; well experienced as propagator of roses, carnations, palms and all kinds of greenhouse and bedding out plants; No. 1 landscape gardener; well skilled in stove plants, growing of grape vines, vegetables, etc. Over 40 years' experience. No. 1 references. Address: CHAS. LONGSTAFF, 20 Jefferson St., Rochester, N. Y.

SITUATION WANTED—By practical, trustworthy gardener, as general manager of private or public grounds or large commercial plant; thoroughly experienced in all branches; particularly qualified in roses, and florist stock in general. Rock-work and landscape gardening; unequalled in stove plants, palms and orchids; a successful hybridizer; 30 years' experience; sober. A first class plant grower. Address: J. B. and A. N. Boet, 100 Bromfield St., Boston, Mass.

WANTED—1000 feet of 1-inch hot water pipe and fittings. Cash for same. J. H. CUNNINGHAM, Delaware, Ohio.

WANTED—Boiler, second hand; Hitches, Myers, or similar make; capacity 3,000 feet. BOX 137, Maywood, Ill.

WANTED—A second-hand hot water heater and some pipe. Good condition. Price, make and price. L. I. PILLISCHY, Macomb, Ill.

WANTED—An experienced man to assist in greenhouse work. State age and wages. German preferred. Steady place. Address: N. BOMMESCHACH, Decatur, Ill.

WANTED—To correspond with nurserymen who wish to try G. L. Grant's new and good way to sell nursery stock. McGOVERN, Washington County, Pa.

WANTED—A first class orchid, palm, fern and stove plant grower. State age and wages. Must be satisfactory, none other needed apply. Address: R. J. MENDESBALL, Minneapolis, Minn.

WANTED—An honest, energetic, well posted, single man, with or without money, to take interest in greenhouse and gardening business. A good place for a good man. Address with references, COL. W. H. GREENHOUSE, CO. Columbia, Tenn.

WANTED—Floral artist. Position will be vacant October 1st. Must be skillful, quick and of pleasing address. A good situation for a good man, none other will be considered. Give references and salary expected. Address: A. M. & J. H. NICHOLS, Pittsburg, Pa.

WANTED—A good greenhouse worker; must understand the business; must be sober, industrious and well qualified; single man preferred; good position and wages offered. Give references and wages expected. Address: J. M. MENTZ, 655 Broad St., Newark, N. J.

WANTED—A first class flower grower for retail market in a pleasant location within the city of Chicago. Must be strictly temperate, able and willing to work. Man with small family preferred. Steady employment and good wages. Address: ILLINOIS, care American Florist, Chicago.

WANTED—Several competent men. Good place for men educated in one or more departments of ornamental business. Propagating, rose growing, palms, orchids, roses, violets, bulbs, etc. for cut flower and decorative purposes. Address: J. T. WILLIAMS, Proprietor LaRose gardens, Memphis, Tenn.

WANTED—For a fine wholesale and retail place, 4000 ft. of glass, in Chicago; a single or married gardener not afraid of work, and able to grow choice plants in quantities. Must be a man for a foreman if satisfactory. Wife of married man to take charge of the household. Wages, references, etc. Address: J. J. Williams, N. Y.

FOR SALE—2000 feet of 1-inch pipe and fittings, used six months, \$2 a foot, fittings half price. A. F. CHAS. 455 E. Division St., Chicago.

Address THE AMERICAN FLORIST CO., Chicago.

EXPRESS RATES.

Some action should be taken at the coming convention of the Society of American Florists looking to an equitable adjustment of express rates on shipments of plants. These rates are frequently absurdly high, especially on short distances and are a serious embargo upon trade. Plants, if properly packed, can be carried by the companies at as low a cost as any other class of freight, and if the facts were placed forcibly, clearly, and authoritatively before the companies, we feel assured that great good would be accomplished. As it is now, very frequently florists who would buy from growers at a distance, when they run short themselves on certain stock, are kept from doing so by the fact that the excessive express charges renders it an unprofitable transaction for them. We have heard of cases where florists have discouraged orders from customers after their own stock was exhausted, when plenty of the plants wanted were to be had at a comparatively short distance away, simply because the express charges added 50 per cent to the cost of the plants and destroyed any chance of profit.

We cannot expect the express companies to adjust these matters of their own accord. And they will not make any move in the matter unless it can be shown that such a move will result to their own financial benefit. This is quite natural. They are carrying freight to earn dividends, and not for glory. But we can show them that with an equitable arrangement of their rates the number of shipments will increase to such an extent as to make the net returns to them from this traffic larger than it now is. This kind of talk will be listened to, and if properly backed up, will be acted upon.

One disadvantage that we have labored under in the past has been the lack of statistics to show the magnitude of the business and of the shipments made. This drawback the last census has removed. We can now present in evidence the figures the government has compiled. We can now say: "Gentlemen, during the census year we prepaid express charges to the amount of \$554,390.55, and the estimated freight and express bills on our outgoing shipments (nearly all express) amounted to \$1,086,904.60, a total of over a million and a half of dollars in one year. This in spite of the fact that we have been handicapped by high express charges. If these rates were reduced an average of one-third the shipments would increase from 50 to 100 per cent the first year and continue to rapidly increase, from the impetus thus given to the business."

The men in charge of the affairs of express companies are business men. They are amenable to reason, and when a fair proposition of this kind is made to them

they will listen to it. But they won't realize the exact condition of affairs until it is brought to their attention in a proper manner. Individuals can accomplish little, but the accredited representatives of a great national organization like the S. A. F. can accomplish much if they are the right sort of men and work in the right way. Results will not come in a moment. It will take time and effort and some expense, too. The men who should be on this committee are men whose time is valuable. Men who cannot make their time valuable to themselves can mightily rarely make it valuable to anyone else. It will be asking considerable of these gentlemen to not only devote their time to the matter, but to also pay out of their own pocket any expense incurred, hence the society should appropriate a sufficient sum for this purpose, so that the work may be done well and no stone left unturned.

The American Association of Nurserymen secured through such a committee and an expenditure of a few hundred dollars, reductions in freight rates on nursery stock that saved hundreds of thousands of dollars to the nursery trade, and at the same time immensely stimulated sales of nursery stock. Our cause is equally as just as theirs, and we can feel reasonably certain of as favorable a result of our labors if we go at it in the right way.

THE Florists' Club of Washington, D. C., has issued a premium list for the chrysanthemum show to be held November 10 to 12 next. In addition to chrysanthemums, prizes are offered for orchids, roses, violets, carnations, decorative plants, and floral arrangements. Copies of the list may be had on application to the secretary, Mr. G. W. Oliver, 1844 Eighth street, N. W., Washington, D. C.

IF YOU are not a member of the Society of American Florists send \$3 now to Secretary Wm. J. Stewart, 67 Bromfield St., Boston, Mass., and ask him to add your name to the membership roll. If you are unable to attend the annual convention you will still get more than your money's worth in the printed proceedings, a copy of which is sent to every member soon after the meeting.

PLEASE send us samples of any advertising matter you get up for your coming exhibition. If every club or society will originate one novel and feasible idea in the matter of advertising exhibitions, a combination of all ought to result in something good. Don't hide your light under a bushel. Speak up, and tell us all what you are doing.

TORONTO rejects the porridge and coffee idea. She proposes to entertain, not so elaborately as some of the larger cities, but in accordance with her resources. We predict that the Toronto convention will be as enjoyable for the pleasure seeking members as it certainly will for those who follow closely the work of the sessions.

THE TRADE will soon be unable to count Mr. H. G. Higley, of Cedar Rapids, Iowa, among its members. He is closing out his seed and greenhouse business preparatory to trying another line, and is now traveling through the southern states in search of a climate and a business opening to suit.

Catalogues Received.

J. L. Dillon, Bloomsburg, Pa., roses; Hulsebosch Bros., Overveen, Holland, Dutch bulbs; Hillebrand & Bredemeier, Pallanza, Italy, seeds and bulbs.

News Notes.

DANVILLE, ILL.—F. Anker, the florist, is reported insane.

INDIANAPOLIS.—Mr. John J. Keller has retired from the florist business.

BRADFORD, PA.—G. L. Graham is starting into business here with two large rose houses, on Jackson Ave.

TAUNTON, MASS.—In spite of the threatening weather the rose and flower show June 20 was a decided advance on that of last year. A very excellent display was made.

BALTIMORE.—Some difficulty is being experienced by the committee from the Gardeners' Club in securing a hall of sufficient size for the chrysanthemum show next November. As soon as a hall is secured the exact dates for the exhibition will be decided and the same announced in these columns.

ADRIAN, MICH.—Nathan Smith & Son are adding three new houses, each 100x20. This addition gives them a total of 18,000 feet of glass. The whole place is heated by steam from two large boilers, and the houses are provided with all the latest improvements in ventilators, apparatus for watering, distribution of liquid fertilizer, etc.

BAY CITY, MICH.—It has been decided to permit the various churches to erect booths in the hall at the time of the chrysanthemum show of the Bay County Hort. Society. The daily *Tribune* is taking much interest in the exhibition and gives frequent reports on the progress of the preparations. It is also publishing from time to time seasonable notes on the cultivation of the chrysanthemum prepared by Mr. John Irvine, our leading florist and president of the Horticultural Society.

SPRINGFIELD, O.—Wittenberg College is in great luck. In addition to a \$30,000 endowment by a former resident of this city, Dr. J. H. Stuckenberg, the well known pastor of the American Chapel in Berlin, has presented the college with a remarkably fine botanical collection, consisting of about twenty-five hundred botanical specimens, representing the flora of the world, and handsomely mounted. This collection was well known in Germany and was secured by Dr. Stuckenberg from the collection of an eminent German botanist, now deceased. It is stated that Harvard College was anxious to get it, but Dr. Stuckenberg preferred giving it to Wittenberg.

LOUISVILLE, KY.—A chrysanthemum show the coming fall is on the tapis here. It is proposed to follow to some extent the lines of the floral and musical festival at Detroit last year. The florists are taking hold of the matter with enthusiasm, and subscriptions are being solicited with the view of putting the affair on a sound financial basis. It is proposed to turn over the net proceeds to some local charity or to a fund for the building of a music hall. Every subscriber for a certain amount will be given a season ticket to the exhibition. November 2 to 7 is the date set. Nanz & Neuner have just completed a new rose house 20 x150. The glass is 12x18, and the house is heated with hot water. The house will be used for the growing of American Beauties.

OUR NEW TRADE LIST NOW READY.

The Rose and the Gardener.

We have pleasure in quoting the following charming poem, by Mr. Austin Dobson, from Mr. A. H. Miles' well-edited *Poets and Poetry of the Century*, recently published by Hutchinson & Co.:—

A FANCY FROM FONTENELLE.

De Manetiez de Roses on n'a point vu mourir le Jardinier.

"The Rose in the garden slipped her bud,
And she laughed in the pride of her youthful blood;
As she thought of the gardener standing by—
'He is old,—so old!—And he soon must die!'

"The full Rose waxed in the warm June air,
And she spread and spread till her heart lay bare;
And she laughed once more as she heard his tread
'He is older now! He will soon be dead!'

"But the breeze of the morning blew and found
That the leaves of the blown rose stirred the ground;
And he came at noon, that gardener old,
And he raked them softly under the mould.

"And I wove the thing to a random rhyme,
For the Rose is Beauty, the gardener, Fate."
—*Gardener's Chronicle.*

The Rise and Fall of the Princess Beatrice.

An eastern rose grower who was phenomenally successful in growing the W. F. Bennett thought he had a bonanza when the Princess Beatrice was introduced to American growers. He thought that a rose produced by the originator of the Bennett must naturally be a "rattler." He invested heavily, and gave a household his very best attention for a season. The writer happened that way then, and after inspecting the Bennett houses, asked: "How are the Princess Beatrice progressing, Mr. Blank?" "You'll find her in the next house," said he, "underneath the parson's I put over her to keep the sun from spoiling her complexion." And looking in we discovered that in supreme disgust with the rose he had built a bench over the bed and left the poor plants to lapse into rubbish. But her "complexion" was saved. G.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

SURPLUS STOCK OF ROSES FOR WINTER FLOWERING

WHICH WE OFFER VERY CHEAP, UNTIL SOLD.

American Beauty, Bride, Perle des Jardins, Mermet, La France and Mme. Cusin,

Grown in 2½ and 3½-inch pots.

Our stock of these is in exceptionally fine shape, very healthy and in the best possible condition for planting. It is the same stock we use for our own planting, but grown in excess of our own wants. They are entirely free from mildew. The American Beauty is free from black spot, and all are in perfect health and perfect condition in every respect. Buyers will find it to their advantage to inspect our stock before purchasing. Write for prices.

WE EXCEL IN AMERICAN BEAUTY, WHICH IS A SPECIALTY WITH US, AND OF WHICH WE HAVE A LARGE STOCK.

We obtained first prize, two consecutive days, above all competitors for our exhibit of "American Beauty" at the flower show of the New York Florists' Club, held at the Lenox Lyceum in New York City, in April.

Long Island News Notes.

C. H. Allen of Floral Park, has put up two houses 100 feet long, for cut flowers.

Thos. F. Martin, for 11 years with V. H. Hallock & Son and son-in-law of John Thorpe, is going to Pearl River to go in business for himself.

From Hallock's and Childs' places no less than five men have gone into business for themselves the last two years.

Water lilies are becoming, and are bound to be, a leading feature in all fine places. Long Island is no exception to the rule.

Geo. Irlam has rented some three or four greenhouses from Mr. Stanley, at Queens.

James Shandley, for some years foreman for V. H. Hallock & Son, and for several years past in same capacity for J. Condon of Brooklyn, has started for himself near Greenwood Cemetery, to make Cemetery work a specialty. Few know how well Weir and Condon have done in this line. There is more work in our line done in Greenwood Cemetery than any other on this continent. H.

Old Time Recollections.

Some few years ago (possibly a dozen) a gardener fresh from the east called on a Chicago florist and told him he could grow roses as easy as falling off a log, and make bushels of money for the man who would supply the houses and pay him a salary. He was engaged, plants were secured, and he removed them from their 4-inch pots and placed them in tubs of earth which he loaded with fertilizer. The plants attained to a considerable height with the lapse of time, but the flowers never appeared in quantity or quality worth cutting. After a year of this the employer told the man to try his talents elsewhere. A few days after his departure an acquaintance called and found the florist had lifted the plants from the tubs. The plants were from three to four feet high, and the florist was potting them into 3-inch pots. After a year in the tubs they had so few roots that they went into 3-inch pots with ease. The plants had been so gorged with fertilizer that this result naturally followed.

A resume of the laughable failures from which the present system of growing roses has been gradually evolved would make very amusing reading now. M.

SMILAX.

Nice stock well grown plants for immediate planting. \$1.50 per 100; \$12.00 per 1000.

FERNISIA, fine, well ripened, home grown bush (far superior to imported), \$1.50 per 100; \$10.00 per 1000.

CALIX (Rosa grandiflora) or Howell, finest of all for house culture, per doz. \$50; per 100, \$4.50.

CYCLAMEN, Persian and Giganteum, fine bulbs and stock, \$1.00 per doz.; \$10.00 per 100.

F. A. BALLER, Bloomington, Ill.

NEW CROP PANSY SEED.

Mammoth Sunbeam Strain.

One of the finest and most perfect strains of Mammoth Pansies yet produced; very large, of fine form and brilliant colors. A very carefully selected collection. These pansies have received high praise from my customers of last season. Every florist should sow of this strain. Trade price \$2.50 per doz.; \$25.00 for 100.

F. A. RIECHERS & SOHNE, Act-Ges, Import and Export Nurseries, HAMBURG, GERMANY.

Specialties in Lilies of the Valley; Azaleas, Camellias in sorts, best varieties in Palms and Dwarf Roses.

Wholesale Catalogue on application.

SPAGNUM MOSS CHEAP.

No sticks, etc. Bale or barrel, pressed and dried on all you need. Geraniums and Fuchsia, nice and bushy at your own price. Cutlery plants, \$5 per 5,000.

PETER J. SCHUR, Kalamazoo, Mich.

PANSIES.

PANSIES THAT ARE UP. No need to worry over getting the seed to come up, it is up and ready to plant when I send them.

It is not only the plants that are up, the strain is up also; up, to, and a goodly number of my customers say, above any strain in the market. The price is down, considering the quality of the strain, seed as good would cost you about as much per 1000 plants. My price is \$5.00 per 1000, or in lots of 2,500 and over, \$4.50 per 1000.

SEND FOR LIST AND SHORT PAPER ON CULTURE.

PLANTS READY AUGUST 20th TO DECEMBER 1st.

SMILAX.

Plants ready July 1st and later. These will be nice and stocky, and ready to go right ahead. There is some 40,000 here; let me have a chance to fill your order.

Send 10 cents for samples and get my prices before ordering elsewhere.

THE RURAL PUBLISHING COMPANY,
Times Building, NEW YORK.

NARCISSUS. FOR FALL DELIVERY 1891.

My Special Trade offer of all the leading kinds may be had on application. I have an **IMMENSE STOCK**, probably the **LARGEST IN THE WORLD**. All the leading popular varieties, especially the **MARKET** kinds, to which I pay special attention.

My stock of **DOUBLE DAFFODILS** is remarkably fine, and is recognized by both the American and European trade as being one of the **BEST STOCKS IN THE MARKET**—all of the true deep yellow old English variety, and not the dirty green kind which has been foisted on the market the last few years, and which is of no use to anyone either for forcing or cutting. To ensure this stock you **MUST ORDER EARLY**, as many late orders I was unable to fill last Fall, owing to the increasing demand for this valuable stock. **GOLDEN SPUR, OVBALLARIS, RUGILOBUS, MAJOR, PRINCES, MAXIMUS**, and many of the best yellow Trumpets I can offer upon very advantageous terms. All guaranteed true and carefully graded. **SEVERAL ACRES** of Early White, Late White, and Double White Poeticus. My stocks of these are enormous, and I can fill orders to any extent and at very low rates.

Of the newer varieties, I grow only the best, and these in large breadths, and can offer **HORSFIELDI, EMPEROR, EMPRESS, SIR WATKIN, BICOLOR, GRANDIS**, and all the best of the two colored Trumpet varieties, in fact I can offer every good variety that may be considered worthy of cultivation. Also all the best varieties of the **INCOMPARABILIS, LEEDSI, and NELSONI** groups; many of which are of undoubted merit, both for cutting and general decoration. My list also contains many other Miscellaneous Bu. ba. and before placing your orders you should see my New Catalogue. The stocks are true, and thoroughly well graded; prices low, and will compare favorably with any English or Continental house.

In addition to above will be found a select list of **LILIES, IRIS and PEONIES, PYRETHRUMS, BEGONIAS**, and a most unique collection of **HARDY PERENNIALS**, including all the best in cultivation and many other plants not offered by any other house. It also contains a full description of the **NEW PINK, HER MAJESTY**, the greatest novelty of the season, and which I purpose distributing for the first time during the Fall of 1891.

THOMAS S. WARE,

HALE FARM NURSERIES,

TOTTENHAM, LONDON, ENGLAND.

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL INSECTIGIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes—Half-a-Pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-pint of the Fir-Tree Oil to two or four gallons of water, or two or three tablespoonsful to the pint.

For Red Spider and Caterpillar—Half-a-pint of the Fir-Tree Oil to two gallons of water, or three tablespoonsful to the pint.

For Mealy Bug, Brown or White Scale—Half-a-Pint of the Fir-Tree Oil to four or six quarts of water, four to eight tablespoonsful to the pint.

For Mildew and Blight on Fruit or Foliage—Half-a-pint of the Fir-Tree Oil to a gallon of water, or six tablespoonsful to the pint.

Used with warm water it is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied in Wood, Tin or Pot Vessels.—(Galvanized Iron Vessels must not be used.)

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ring-worm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a tablespoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

Sold in Bottles and Tins.

Manufactured—E. GRIFFITHS HUGHES,
MANCHESTER, ENGLAND.
SOLD BY ALL SEEDSMEN.

Price List sent on application to

THE WHILLON POTTERY CO., 713 & 715
WHARTON STREET, Philadelphia, Pa.

STANDARD FLOWER POTS

We have the following large Hand-Made
Flower Pots slightly damaged, that we will
sell in one lot at a low price, to make room
for perfect goods:

150.....	12-inch.	40.....	18-inch.
50.....	14-inch.	30.....	20-inch.
50.....	15-inch.	20.....	22-inch.
75.....	16-inch.	25.....	24-inch.

A. H. HEWS & CO., CAMBRIDGE, MASS.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness,
smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT**
of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/4-inch.....	3,000	250 lbs.
2 ".....	2,400	200 "
2 1/4 ".....	1,750	150 "
3 ".....	1,400	120 "
3 1/4 ".....	1,200	100 "
4 ".....	800	60 "
4 1/4 ".....	600	50 "

It will be seen at a glance, that our pots are one-
third lighter than formerly, and yet we claim that
owing to the superior quality of our clay and im-
proved machinery, they are stronger than any pot
in the market, and we frankly ask you to make the
test.

SEND FOR PRICES.

SIPLE, DOPFFEL & CO., Syracuse, N. Y.

Single and Double Thick Glass.

In your issue of June 11 your correspondent reports the loss of about 33,000 square feet of glass by hail at Cincinnati on June 4. He shows that one of the sufferers, Mr. Walter Gray, had comparatively small loss where he used large panes (18x24), although on his other houses where small glass was used the loss was more than twice as much. Now will he please inform us whether or not the large glass was double thick and the smaller glass single thick. We can then better determine the cause of the difference in the loss. The writer has always held that double thick glass is ultimately the cheapest. Could we have the views of Mr. Jno. G. Esler on this point?

Pittsburg. ALEX. MURDOCH.

Hail Insurance.

If J. F. will take a little time to study up the working of the Florists' Hail Association he will find that upon the payment of extra dues the persons insuring get an extra pro rata payment for loss, which, of course, covers trouble of putting in glass, etc.

We frequently hear it said, "The loss of the glass don't amount to so much," but, we have as frequently noted, that these same florists who don't mind a few boxes of glass squeal the loudest when they get hit. JOHN G. ESLER, Secretary.

WILL you be with us at Toronto? You will miss it if you stay away.

THE Oklahoma Floral Co. has started in business at Oklahoma City, O. T., with two good sized greenhouses.

THE Chicago Florist Club is now making arrangements for transportation to Toronto in August, and will as usual invite members in the west and north-west to travel with them from Chicago.

THE TIME for the annual convention of the Society of American Florists is approaching. Will you attend? Better begin now to shape your affairs so that you can safely leave your business for a week or so in August. The man who has regretted the time and expense of attending these conventions has yet to be found.

The Seventh Annual Meeting

—OF THE—

SOCIETY OF AMERICAN FLORISTS

WILL BE HELD AT—

TORONTO, ONTARIO,

AUGUST 18, 19 AND 20, 1891.

Members may remit the annual dues (\$1.00) to the secretary or treasurer prior to the meeting, thus avoiding the crowd and relieving the officers on the opening day. Badge for 1891 will be sent by mail to those who remit in advance of the meeting. Intending members can obtain any information wanted by addressing the Secretary, M. H. Norton, Pres., Boston, Mass.; John Chambers, Vice-Pres., Toronto, Ont.; M. A. Hunt, Treas., Terre Haute, Ind.; W. J. Stewart, Sec'y, 67 Bromfield Street, Boston, Mass.

FLORISTS' MAIL ASSOCIATION.

Insures greenhouses against damage by hail.

Society of American Florists.

The preliminary programme for the Toronto meeting will be ready for distribution about July 15, and will give a list of the essays which will be read, together with full information regarding transportation to and from the convention, hotel rates, and other matters of interest.

A uniform rate of one and one-third fare for the round trip, on the certificate plan, has been granted by all the trunk lines and passenger associations, with the exception of the Western Passenger Association. This association controls only roads west of Chicago and St. Louis. Every possible effort has been made to prevail upon their committee to grant to our members living in the territory facilities equal to those enjoyed by members in every other section of the country, but without success. Members coming from territory west of Chicago are therefore advised to travel, if possible, only upon roads not represented in the Western Passenger Association, purchasing tickets only to Chicago, St. Louis or other central points, from which place the reduced rates to and from Toronto may be secured.

Dues for the year 1891 (\$3) may be remitted to the secretary at any time previous to the convention by members who desire to avoid the rush at convention time. Badge and receipt will be mailed in return. Those whose dues for 1890 are still unpaid are reminded that all arrears must be settled before a badge for 1891 can be secured.

The Question Box will be, as heretofore, a most interesting and instructive feature of the meeting. Questions may be sent to the secretary in advance, or may be placed in the box during the sessions and competent gentlemen will be assigned to reply to them.

Intending exhibitors are notified that all dutiable articles intended for exhibition purposes will be admitted free. Exhibitors of heating apparatus are informed that in accordance with a vote of the executive committee no certificates will be hereafter awarded to such exhibitors, the judges in this department being instructed to call attention in their reports to apparent points of superiority only.

WM. J. STEWART, Sec'y.

Names and Addresses of Chairmen of Committees of Toronto Gardeners' and Florists' Club for S. A. F. Convention, August, 1891.

Reception Committee—Mr. John Chambers, Superintendent Parks and Gardens, St. Lawrence's Hall, Toronto, Ont.

Trade Exhibit Committee—Mr. Thomas Manton, florist, Eglinton, Ont.

The majority of the above hotels are in the business portion of the city, the center of which is about one and a half miles from the convention hall in the Horticultural Gardens. Street cars pass the doors of all of them, making communication between hotel and hall quite easy.

Members wishing to secure accommodation before hand will do well to communicate early with Mr. J. H. Dunlop, 1 McKenzie avenue, Toronto, Ont.

If you have any really good thing to sell to florists, don't fail to show it at the trade exhibition at Toronto in connection with the annual convention of the Society of American Florists. All the live men in the trade will be there, and they are the men who are quick to discern merit in anything that really possesses it. If you have a good thing, show it there by all means, but if it is a "fake," keep it away. It won't pay you a cent to exhibit anything that does not possess real merit.

Leaves of Advice From a Lamb of the Law.

(For Young Florists.)

XXX.

Of course you can't afford to lose fifty dollars. No man can. The millionaire A. T. Stewart made his employee in the packing department keep a box into which all crooked nails, bits of iron and broken screws were thrown. In this way a hundred dollars or more was saved in a year's time.

Now, if I understand you correctly, Mrs. Featherly has within the year past ordered flowers from time to time and that when you presented your bill to her the other day she referred you to her husband.

Featherly, who is a pretty decent sort of a fellow when he is inclined to be, shrugged his shoulders and replied that as he was not living with his wife now, and as her father had money, that he, Featherly, could not pay the bill.

This was news to you, you had not heard of any separation, it had not become public scandal, and therefore I have to advise you that unless they can show knowledge in you of her having abandoned her husband's bed and board, you will be entitled to collect your bill.

I have already called your attention to the fact that while cut flowers are extremely delightful to the senses, they are not what the law considers "necessaries of life." Necessaries of life are food, clothing and lodging and it would make absolutely no difference whether a man is living with his wife or not, whether you knew of the break between them or not; so long as the marriage contract lasts, a man is in the eye of the law obliged to make good to strangers their expenditures in housing, feeding and clothing his wife. If he wants to free himself from this liability he must get a limited or a complete divorce against her and bring home to the world notice of the dissolution of the marriage contract between them.

At common law the position of a married woman was peculiar to say the least. Her very name, being and entity became merged into that of her husband. She might even commit a murder and excuse herself by saying "my husband told me to do it."

All her property became his and he was entitled to the wages earned by her. He might collect her week's pay for scrubbing and washing and spend it at the ale house.

If she uttered a slander or committed a trespass he was liable for it. She was his slave, his chattel, his servant, his handmaiden. He might whip her provided he did not injure her health, he might have her ducked in the horse pond if she scolded too much. He might in some cases indenture her out to work just as a father can a son. If she ran away he could have her arrested and brought back and if she was lazy and indolent he might shut her up in the cellar to discipline her. If he beat her unmercifully it was not even an assault, and was only a breach of the peace and a small fine made things all right again.

But thank heaven all these barbarisms have been swept from our legal systems by what we call the "Married Women's Acts," which in most of our states now place the wife exactly upon the same footing as the husband, except that she may not vote and is not liable for jury or military duty.

This legislation is the one thing of which our celebrated 19th century may well be proud. It is a splendid monument to the

civilization and humanity of our age and if our republic should be disrupted tomorrow it would not have lived in vain.

By these Married Women's Acts, as they are called, a husband has lost, I might almost say now and forever, what is commonly known as "control" over his wife. Or to put it differently, the only control that a man has over his wife nowadays is that mere "social fiction," by which the man is permitted to pose and parade as the master of the household. That is to say, it only exists as a shadow of a right and not the right itself.

A wife's real and personal estate is hers to sell, mortgage or give away, as she may see fit, and in most states it is not even necessary for her husband to sign the deed of mortgage. The wife may speculate, go into business, become a stockholder in a corporation or a partner in a firm. She may go on a bond, make a note of hand or sign any kind of contract she chooses with respect to her own property.

So you see the reformer has been in such haste to free the married women from the tyranny of the common law that he has not "evened things up," so to speak, by which I mean that while the wife's right in the real property of her husband (right of dower) still remains, he has no corresponding right in her real estate, or at least if he has she may destroy it by deed or will, which he cannot do.

A great lawyer, David Dudley Field, takes the position that man and wife should stand on the same level, that is, have only such rights in each other's property as they of their own free will choose to give to each other; and I agree with him heart and soul.

Now as to your dealings with married women: If a married woman buys a large bill of merchandise from you, trees plants and flowers to decorate and improve her own real estate, you would not need to ask any recognition of that contract on the part of the husband, for the law holds that whatever goes to improve or beautify a wife's separate estate should be charged upon such separate estate. Therefore I would counsel you when dealing with married women having estates of their own to have it specified in writing to whom the credit is given, then in case of a squabble it will not be possible for her to put the account off on her impucent husband.

Some men who have rich wives resort to despicable trickery to raise funds on their wives' notes and then when the notes are sued they set up that the note was not given for value, as it didn't go to the benefit of the wife's separate estate. So when a married woman's note is offered to you first inform yourself as to its origin; whether she gave it or whether she has any interest in it; of course a married woman must use her husband's name. She may if she choose tack it to hers this way: Julia Smith marries a Brown and becomes Julia Smith-Brown with a hyphen. This shows the transaction and ought I think to be followed.

Always look with suspicion upon any firm or concern having women in it when that fact is suppressed or covered over in any way.

Now the law will allow a wife to help her husband, but her note to raise the money for him should use these words: "I hereby charge my separate estate with the payment of this note." While it may not always be necessary, yet insist upon those words being added to the end of the note. If in selling a bill of merchandise to a husband for a fete to be given by his wife, you first charge the goods to the

husband, you will not be allowed to shift the credit to the wife when you find that she has the ducats.

You ask me whether that rule would obtain in case the goods were necessities for the wife? I answer no. If you fail to collect the amount from the husband you may then sue the wife, alleging that you seek to charge her separate estate.

But while on this subject of credits I would say that you can't be too careful how you give a credit when the husband has a rich wife. The best way is to get an order from the rich wife over her own signature. I don't think that women as a rule are inclined to shirk their honest debts, but men teach them to be sharp and unscrupulous.

Life, you see is full of difficulties, but human life is only a bit more difficult than plant life. The price we pay for existence is eternal vigilance and unceasing application. The very moment you become careless your vigilant competitor gets ahead of you. Whether a man raises roses or writes briefs it's all the same. He who does it best gets best reward.

UNCLE BLACKSTONE.

Packing Cut Flowers for Shipment.

A method we have used extensively is here outlined.

Wooden boxes are used. If second hand, we are careful to avoid those that have been used for odorous articles like matches, codfish, and the like.

When to be more than six or eight hours in transit we invariably use ice in the boxes, with nearly all kinds of flowers. In cold weather a small quantity of it avoids heating in warm cars and when warm it is a necessity to keep the flowers in fresh condition. Before putting any flowers into our box, either a board is nailed or propped in crosswise, or a cushion of waste paper or any similar firm material is filled into one end, and of such extent and shape that flower stems resting on it would be at an angle of 30 to 40 degrees of elevation. Tissue paper should be used freely in lining the box, coming up all around to fold over the heads of the flowers at the finish. Place roses and heavy flowers in first at this angle. Roses of the size of Perles can be put in in handfuls of fifteen to twenty-five, the cut ends of the stems uniform at bottom of the box, the heads varying. Fill in a layer of these handfuls across the box, adding packing material in any empty spaces to fill firmly. Any ice used should go in among the stems; heretofore it did its work best, keeping the stems wet and the flowers fresh without wetting the heads. A succession of these crown layers with tissue paper used freely between them until the stem ends of the flowers strike the other end of box fills it, excepting a remaining wedge shaped space over the last layer, and which is often adapted for light flowers, like long stem carnations, bouvardia, alyssum, violets, or smilax; in any case, it should be filled snugly with some light material. Ruffle down the loose top portions of the tissue paper over the flowers, and you are ready for the cover.

Packed in this way, most kinds of flowers will carry perfect, especially if the box is kept right side up. This we accomplish to a certainty by attaching a handle to the box consisting of a piece of small rope running lengthwise over it, somewhat slack. We fasten this quickly and firmly by one or two one-inch long double pointed cut tacks or staples driven into each of the heavy box ends, the staple straddling the rope, as it were; the

PAVILION IN THE HORTICULTURAL GARDENS, TORONTO, ONTARIO, IN WHICH THE COMING MEETING OF THE SOCIETY OF AMERICAN FLORISTS WILL BE HELD.

shipping tag is fastened to the rope handle by a piece of wire; expressmen at once comprehend its use and the package goes and stays right side up. Our experience covers the handling of a large number of boxes packed in this way and they have universally been properly handled. In packing flowers the size of ordinary roses in this way, boxes eight to nine inches deep work the best. We adapt this principle in style of packing, modified somewhat, to small retail lots of flowers in small boxes, also longer stemmed flowers in large boxes.

Common sense work in packing is necessary to attain to successful results in shipping flowers. Much is to be considered in suiting the packing to the distance and the weather, and the kinds and qualities of flowers.

For protection against cold, sheet wadding and heavy paper seem the more efficient, and at the same time convenient. Avoid too much cotton packed tight against the blossoms, as it has a drying effect. Cold enters packages more readily from the bottom, through exposure on cold floors of stations, platforms, wagons, etc., so ample protection there is necessary. Running the sheets of paper or cotton beyond the corners or angles of boxes at which points the cold air gets in readily should be practiced.

Carnations should be packed as dry as you can, at as low a temperature as can be reached without freezing. No moisture should come to them, especially to their heads. When packed with roses they should be in the upper and loosely packed part of the package.

Most all roses travel well, if the stems can remain moist, but the heads should be nearly or quite dry; Jacq roses, however, bear much wetting; and when shipping them in warm weather we use small ice lumps among them freely, almost packing them in ice. In warm weather we prefer them packed loose as possible in open-work baskets, so ventilation is free.

Don't nail down flower box covers as though you were shipping hardware across the Atlantic. Someone must pull out those big nails in a few hours, probably hurriedly in a store filled with customers waiting for these flowers. A shingle or six-penny nail in each piece of cover will answer all purposes.

Don't expect flowers to put on a new life and vigor in an express car, or that stuff in an advanced stage of development will bear packing, transporting and handling and ultimately be a source of pleasure and delight to the consumer, and an inducement to him to send to you again for more.

D. B. LONG.

Buffalo, N. Y., June 24, '91.

Botany at Harvard University.

The following facts regarding the botanic garden, herbaria, and arboretum at Harvard University, Cambridge, Mass., will be of interest to many readers of the FLORIST.

The botanic garden and greenhouses occupy about seven acres of land adjoining the observatory grounds. About 6,000 species of flowering plants are grown for educational purposes, supplying students of botany who are members of the university with abundant material

for determination or investigation. The botanical library of 9,000 volumes and pamphlets and the university herbarium are contained in one of the buildings belonging to the garden. The herbarium contains several hundred thousand specimens which are open, under the direction of the curator, to qualified and properly registered students. The accessions to the herbarium in 1889-90 illustrate the direction and the rapidity of its growth. They included 850 specimens from northern Mexico, embracing many new and little known species; 575 from Canada; 600 from Porto Rico; 670 from Bolivia; 700 through the director of the Kew gardens, mainly from China, Tasmania, and Brazil; 126 from Arabia Felix; 300 from South Africa; 240 from Australia; the entire Thomas P. James collection of mosses, and a large part of the George Thurber collections.

The herbarium of cryptogamic botany is placed in the university museum in connection with the botanical museum. It contains several hundred thousand specimens, including the Tuckerman collection of lichens, having about 75,000 specimens; the Curtis collection of fungi, about equal in magnitude; and the Farlow collection of algae, lichens, and fungi. Competent students who are not members of the university may obtain permission to use the herbarium under proper supervision.

The Arnold arboretum occupies a portion of the Bussey farm, 160 acres in extent, in that part of Boston known as West Roxbury. It was founded for the purpose of scientific research and experi-

ment in arboriculture, forestry, and dendrology, and as an out-door museum of trees and shrubs suited to the climate of Massachusetts. The living collections are supplemented by others in the herbarium and museum, which are temporarily placed in the "Dwight House" in Brooklyn. Anyone properly qualified to pursue the study of practical arboriculture or forestry may be admitted to the arboretum as a student. Details are obtainable from the director, Professor Charles S. Sargent, Brookline, Mass.

Specimen Chrysanthemums.

I was rather astonished to read on page 84 of the *Florist* that Mr. John Thorpe was advocating growing two or more chrysanthemums in a pot to make showy exhibition specimens. I would like to know from Mr. Thorpe if he thinks there is any art in manufacturing a specimen in that way, also what an exhibition is for. I have always understood that an exhibition was for the purpose of displaying the skill of the grower as an incentive to the masses to imitate or equal his skill, a means of educating the people to grow or have grown for them specimen plants as near perfection as an expert in the art grows them. I do not think that placing two or more plants in a pot is much of an art.

If a mass of color is the desideratum at an exhibition why not provide a class for effect, either devote a given number of feet of floor space or designate a given number of plants and let quality of flowers and general effect be the criterion. I think this class is common at exhibitions and is always very effective. I do not mean single stem and single flower plants; I mean plants with from five to eight flowers which are far more effective than the above. If we are to be allowed to stick an unlimited number of plants in a pot the size of the specimen would only be limited by the size of the pot and not to the skill of the grower. Why not utilize a wind mill tank, say 12 by 12 feet, mounted on wheels, bore holes all over it and plant with chrysanthemums and hire a team of elephants to draw it to the exhibition? It would be worth something as an advertisement and would interest if it did not please the public as a specimen.

JOHN DALLAS.

[Mr. Thorpe did not exactly "advocate" the practice of putting two or more plants together in the same pot. He simply said he saw no objection to so doing if the plan met the views of a majority of the exhibitors and no rule was made to the contrary.—Ed.]

Myosotis Dissitiflora.

"There are few spring flowers more valued than the forget-me-not," says J. C. B. in the *London Gardener*. "It is well to put some portion of the stock in a cold frame where there is a reasonable chance of their coming through a period of hard weather unharmed. Not only is this the case, but the blooming season is thereby hastened. A year or two ago some old plants hap-

pened to be cast out doors among some old currant bushes. Young plants that came up were allowed to remain, and it was very noticeable how green and healthy they looked when the cold east winds were exercising their usual effect on things generally. They came, too, into bloom quite a fortnight before the old plants, being very welcome for cutting when outdoor flowers were so backward. One of the best ways of treating this forget-me-not is to devote a sheltered corner to it, and just when the plants begin to grow freely to dress the ground among them with an inch of leaf mould or thoroughly rotten manure. A stock of plants for the following season is then provided for without the trouble of sowing, as the seeds that drop will be sure to germinate in the course of the summer. When these come up, and they will germinate much more readily by being screened from sun and air by the old plants, the latter can be pulled up and the young ones given room to develop. Although old plants will generally bloom very well, young ones are earlier, and the flowers they produce are much finer, both as regards color and size. Treated as above, one may be sure of having enough of this charming and indispensable flower when the blooming time comes round."

Try this forget-me-not as a pot plant for spring sales or for Easter trade.

Aralias.

The aralias are a very useful class of ornamental plants, either for conservatory or room decoration, as they are of good habit and constitution. They are found in almost every part of the world, but the handsomest species are natives of the South Sea Islands. Some varieties are excellent for sub-tropical bedding and are half hardy. The aralias are all of moderately free growth and are quite easy plants to manage, one of their most important requirements being to keep them well supplied with water at the roots and another is to have perfect drainage in the pots.

The finer or stove varieties should be potted in fibrous loam and peat with sand enough to keep the soil open. The stronger growing kinds, such as *A. papyrifera* and *A. Sieboldi* require a richer and stiffer soil. They are all benefited by an occasional watering with manure water when growing freely. They are propagated from cuttings, root cuttings, and by grafting.

To obtain the roots, take a strong, well rooted plant, and shake it out; select good roots, and cut in pieces about two inches long; in planting the roots place the end of root nearest the stem uppermost in pots of sandy soil, leaving the top of cutting level with soil, then plunge in moderate bottom heat in cutting frame, or else cover the pots with glass. They can also be increased by eyes taken from the stems of the plants, making the cuttings about an inch and a half long and having the eye at the upper end, and taking a slice of wood off the cutting opposite to the eye. When the cuttings are made they should be pressed singly into small pots filled with sandy soil, leaving the eye above the surface. Then plunge in bottom heat and keep close in cutting frame. The plants when cut down should be plunged in bottom heat, and then they will often throw up several suckers, which can be taken off and potted, and will soon make good plants. All the greenhouse varieties are readily propagated by cuttings or from the roots.

Some of the stove species are difficult to

propagate from cuttings, and should be grafted on one of the free growing varieties. *A. Guilfoylei* or *A. reticulata* make good stocks to work them on. When grafting them work them as low as possible. As soon as the grafts have taken the plants should be repotted and treated the same as plants raised from cuttings. I will only mention a few species, selecting the most useful ones for decorative effect.

A. papyrifera: This is a grand plant for the sub-tropical conservatory, or as a greenhouse plant it is a strong grower, and is quite hardy in England.

A. Sieboldi: A very fine, ornamental plant for conservatory, and when in a young state a good window plant. It does best in a cool greenhouse.

A. crassifolia: A fine decorative plant of erect habit, having long, narrow leaves of dark olive green, midrib prominent and deep orange in color. Cool greenhouse species.

A. filicifolia: A free growing species, with pinnate leaves of light green. A very useful variety.

A. Guilfoylei: A good grower, with pinnate leaves of light green bordered with creamy white.

A. Veitchii gracillima: The most beautiful plant of all the aralias. The leaves are filiform and the midribs are ivory white. This is an exceedingly ornamental hothouse plant. This variety is increased by grafting.

A. elegantissima: A handsome plant something in the style of *A. Veitchii*. Propagated by grafting.

A. Osyana: A elegant variety with digitate leaves of light green, and the ribs of the leaves brown.

There are many more species in cultivation, and almost all of them make fine decorative plants and are deserving of a place in all collections of plants.

Maywood, N. J.

J. S. TAPLIN.

Basket.

The peculiar shape of this basket is well adapted for some arrangements of orchids. We first filled with white carnations (Lamborn), which made a good back ground for a number of pale *Cattleya Trianae*, several blooms of *Cypripedium Lawrenceanum* were used with good effect. To one side of the handle we fastened several blooms of *Dendrobium thyrsiflorum*, allowing them to fall gracefully as is their habit. *Asparagus plumosus* was used for green and on the other side of the handle we arranged a few of that beautiful sweet pea *Blanche Ferry*. An enterprising Philadelphia grower was successful in bringing sweet peas into flower on March 21. We think that this breaks the record. Good flowers with a bit of foliage have been sold for two dollars and a half per hundred; they surely ought to pay at that price.

H. H. BATTLES.

Violas.

In the *Gardeners' Chronicle*, May 23, your correspondent, "J.," writes of some distinct violas, and in reading the reports of the spring gardening in the London parks, I have wondered how it is that those lovely plants are not much more grown for spring and early summer decoration. For years I have striven hard to obtain for the viola a much more prominent place than it yet has in our spring and summer decorative work, but it is so hard to get many to move out of the beaten track. "J." speaks highly of Bul-

BASKET.

lion, truly a grand yellow, and I saw a bed of it in bloom in February, when we had at Birmingham some lovely spring weather, and it has been bright ever since, notwithstanding the recent frosts. "True Blue" and "Mrs. Charles Turner" are two of my seedlings, of which I am very proud. The former is very early and floriferous, and is unquestionably our best blue. Mrs. Charles Turner is truly a fine thing of very dwarf habit, and of a blue violet color. Countess of Hopetoun is a gem amongst whites, having a very dwarf, compact habit; and for a stronger grower Marchioness of Tweeddale is a very fine variety, snow white, without any marking whatever. Countess of Kintore, a beautiful blotched variety, light purple, with a large, distinct light blotch in each petal, is a great favorite. But there is a great beauty, sent out by Mr. Downie, Edinburgh, three years since, named "The Mearns," which, I

understand, is the local vernacular for "The Meadows." This is a grand variety, of rich violet color, and with clear, light colored, almost white, top petals, and a wonderful bloomer, and at the same time Mr. Downie introduced "Lady Amory," similar in color and marking, but the body color has a rich, rosy carmine shade in it. Both should be in every collection.

There are now a great number of varieties, of which many are deserving of cultivation by everyone. Of course, one has to know "how not to grow them," as well as how to grow them well. Cuttings should be taken early in the summer and struck under a north wall without glass protection. These make strong, sturdy, well rooted plants, either for planting out in their blooming quarters early in November or before, to get well established before winter sets in, or the plants kept in protected places for planting out

early in spring. The violas (and the pansies) are very hardy plants, if grown hardy, but not shut up in frames, for the damp steps in and away go the plants. I think a great misconception has prevailed as to violas being difficult to grow, and hot summers have certainly been very destructive to them at times, but we want the viola for very early work, especially from March onwards, and a batch of spring struck cuttings, kept under a north wall or shady place, will insure a supply of stock in case of a slaughter in the beds.

An effort is being made in some quarters to call violas "tufted pansies," a designation I emphatically protest against, and it is also misleading to the public, who are led to suppose they are buying a new race of pansies. One advertiser rushes into a poetic strain in their resemblance to "A Spray of Western Pine." I shall continue to call them vio-

las and bedding pansies, for they are getting very much mixed, and the pansy blood is getting very much infused with the ordinary bedding viola.

One of the most interesting corners in my garden contains a batch of the wild pansy, and in these we have the original type of pansy found by Lord Camber in the fields adjoining his mansion at Iwer, and handed to his gardener, Mr. Thompson, for cultivation, about the year 1813. I have now growing in my garden the original form of the wild pansy, and the "up to date" new varieties of our grand fancy pansies.—H. Dean in *Gardeners' Chronicle*.

Varieties of *Cypripedium Boxalli*.

C. Boxalli is distinguished from C. villosum—of which it is considered a variety—by the upper sepals and the petals being narrower at the base and revolute at the margins, a circumstance which has the effect of somewhat reducing the area of those organs. We noted a fine form of C. B. atratum the other day in the nursery of Messrs. Charlesworth, Shuttleworth & Co., Clapham. The flowers were of great size, and the upper sepal was nearly covered with blackish purple blotches, which were confluent on the upper portion of that organ; the margin was broad and white. The petals were obovate and deep shining brown on the upper longitudinal half. The lip was yellowish, and suffused with light brown in front. In the same house was a flowering piece of C. Boxalli superbum, having much darker and more richly colored flowers than the above. The blackish purple of the upper sepal was almost continuous, with a few small greenish blotches here and there through it. The upper longitudinal half of the petals and the front of the lip were also several shades darker than in C. B. atratum; and the margins and lower longitudinal half of the petals were of a clearer yellow. C. Boxalli itself was in flower, showing off by contrast the great difference between it and the varieties in the matter of color.—*The Gardening World*.

New Orchid Pot.

An English potter is introducing a new orchid pot, of which we give an illustration, reproduced from one which appeared in the *Gardening World*:

"The advantages of this pattern orchid pot and pan," says the introducer, "will be obvious to all experienced orchid growers. The great difficulties experienced in the use of the old pattern orchid pots were the accumulation of water at the base of the pot and the difficulty of keeping the pots clean; the oval and round holes being in many cases too small to get a brush into, to clean out the accumulated green growth, which is known to be injurious to the roots, besides spoiling the cleanly appearance of the pots. In this pot these faults are remedied and the accumulation of water at the base prevented. The base of the pot being concave, the portions between the slits form legs, which raise the main part of the pot above the stage and obviate all risk of stagnant water remaining at the base of

the pot inside. The slits are V shaped, facing outwards throughout their whole length, thus facing the pot cleaner, not simple cut slits, the object of these being to enable the gardener to use a brush and clean the slits as readily as he can the outside of the pot. Both pots and pans are provided with a rim, in which three holes are pierced, so that wires may be put in to hang them up if desired. The pans will prove a special boon to cattleya growers, as the free drainage at the base will prevent the roots getting rotten."

NEW ORCHID POT.

Note for Committee on Nomenclature.

Roses "Souvenir de S. A. Prince" and "The Queen." These two roses are identical with me, and I am certain I have them true, as they were procured from the introducer in each case. Souvenir de S. A. Prince was raised by Mr. George Prince, of Oxford, and is a fixed sport from Souvenir d'un Ami. Like its parent, Souvenir de S. A. Prince is one of the best of all tea scented roses; in color it is pure white, very sweetly scented, producing large quantities of flowers all the time the plant can be induced to grow. For forcing this is one of the very best, while it has a splendid habit and really handsome foliage. The Queen is also a sport from Souvenir d'un Ami, and was sent out about the same time. In the latter case the rose originated in America, and was sent out by the Dingee & Conard Company, Messrs. William Paul & Son distributing it in this country. It will be seen from the above that this is simply another instance of a rose sporting in two widely different places at the same time and with the same result. Doubtless these roses will be bracketed as synonymous by the National Rose Society after another season's trial.—*Correspondent in London Garden*.

If you have anything to sell to florists, keep your name continually before the trade by a card in these columns. The effect of a large advertisement run a few times during the busiest season can be greatly enhanced by running a small card continuously during the rest of the year. Your name and specialty should be given in every issue, so that there will be a continual reminder before the eyes of possible customers.

Plants Growing on Mossed Wall.

The illustration shows plants growing in moss on a wall in the aquarium at the Allegheny City Park. To moss the wall spikes with eyelets are driven into the wall, 6½ inches apart, then galvanized iron wires are strung from point to point. Moss and a little soil is then packed between the wires and the wall. The plants used in this case were selaginella, begonias, farfugiums, fittonias, cyperus, nerteras and leras and they made a charming picture.

Chicago.

O. W. Freese, wholesale florist at 66 Wabash avenue, made an assignment June 30 to John E. Bohan. The liabilities are reported to be about \$1,500 and the assets are estimated to be from \$400 to \$450. The principal creditors are growers, to whom money is due on consignments. Those holding the largest individual claims are A. T. Jackson, \$409; F. Stielow, \$239; M. E. Page, \$234, and George Hancock, \$100. The balance is made up of a large number of smaller claims. The business, as last established, has been running less than a year.

Mr. W. W. Coles, of Lansdowne, Pa., reached the city Monday last week to look over the ground preparatory to locating some point near here and grow flowers for the Chicago market. He left for home again the following Wednesday with several propositions under consideration. Mr. Coles was much pleased with the appearance of the city. He liked the stir and bustle on every hand, and after sizing up a few rows of fourteen story sky-scrapers and finding that one in course of erection would have twenty stories, he concluded the town was about his style. He expected to buy land and begin building very shortly.

Mr. John E. Bohan has been traveling through the south since he left the Garfield Park Rose Co. He was much impressed with Texas and particularly with Dallas and Fort Worth. He drifted up into Oklahoma Territory, and says the appearance of the crops was simply great, but the houses were very crude as yet. He visited Oklahoma City, which he describes as a typical frontier town. He did not hear of the Oklahoma Floral Co., recently started there, and expressed wonder that anyone could find any encouragement to start a floral business there. Mr. Bohan visited Nashville, New Orleans, Birmingham, Ala., and other Southern cities also.

On July 1 Mr. P. J. Hauswirth succeeded to the retail business which has been conducted for so many years by Charles Reissig. Mr. Hauswirth is very popular with the trade, and all wish him success as proprietor of the business which he has in past years done so much to advance as an employee.

At the adjourned session of the last meeting of the Florist Club some stiff scores were made and one given as the closest on record among the florists here. The average was 175 on one side and 176 on the other. These were considered pretty good averages and the game close enough to be interesting. The highest individual score was 218.

The market last week was extremely flat. Still there is no apparent glut of stock at present, in fact the rose crop is short. The reason for this is quite plain, as the growers can handle it, and the new stock will not be in for three months, so we are depending entirely for good roses

PLANTS GROWING ON MOSSED WALL.

on what is grown expressly for the summer trade and there isn't enough of this to supply even the limited demand. Beauties and La France are fairly plentiful and as good in quality as were ever seen in July. Beauties particularly sell well and bring from \$2 to \$3 a dozen.

Peter Reinberg, has a house of Woottons just coming in, the flowers are very fine in shape and of good color and of fairly good size. We notice quite a number of growers who are going to give this rose a trial. Mr. W. N. Rudd, superintendent of the Mount Greenwood Cemetery, is quite enthusiastic about this rose, having tried it on a limited scale last season. He intends to devote a new house, 100x20 to it, feeling confident that he will be able to grow this fickle beauty as well as anybody "down east." We hope he may succeed.

No action was taken at the last meeting of the World's Fair Directory regarding the appointment of Wm. G. Forsyth as Chief of the Horticultural Department. The committee having the matter in hand had appointed a time for a meeting but there was not a quorum present and the matter still hangs fire. Among the objections urged against Mr. Forsyth was the alleged fact that he was not a citizen of the United States. It is reported in the daily press that this was a fact and that on receiving a query from Chicago as to the truth of the assertion made, Mr. Forsyth, who was in California at the time, immediately took out his naturalization papers. It seems hardly credible that a man who was not a citizen should have been appointed a national commissioner for the fair, and have held that position unquestioned for four or five

months. It seems to be generally accepted that Mr. Forsyth's name will be rejected by the local directory, and it is reported now that the department will be partly organized, by the appointment of the heads of the sub-divisions, under the temporary supervision of the Chief of the Bureau of Agriculture, until the Director-General shall name a man who can receive the endorsement of both the Board of Control and the Directory.

Mr. J. E. Beebe of Denver passed through the city last Monday. He has been visiting the principal rose growing establishments in the east for ideas and stopped over to see if he could find any additional ideas around Chicago. He will build some rosethos embodying the best of these ideas on his return and hopes to thus meet with better success in producing roses for the Denver market than in the past.

The Horticultural Society of Chicago will hold its regular quarterly meeting next Saturday afternoon at the Sherman House. In addition to the paper on hardy plants by Mr. J. A. Pettigrew, there will be another essay, by Mr. Edgar Sanders, on some subject of his own selection. The meeting promises to be a very interesting one.

Dr. J. A. Kennicott found among his poppies a very double flower of a remarkably handsome shade of pink that was evidently a cross between a purple and a white variety that stood close together.

Down near La Salle is one of the most beautiful glens in the country. It is but little known from the fact that it is some five miles from a railroad station and inconvenient to get to. But the scenery is really wonderful, especially located as

it is in the prairie state where but little of the way of scenery can be discovered. Mr. John Thorpe recently visited the glen and could not find words to express his admiration. The glen consists of what would in the far west be called a canyon, in which the flora is most interesting. It is easy of entrance at one end, but there is no outlet at the other, and it was used by the Indians as a trap for game, which was driven in and then dispatched, being unable to escape except by the entrance which was of course guarded. In this beautiful and interesting spot Mr. J. C. Vaughan has erected a summer home in the shape of a picturesque log house and here his family is sojourning during the heated term. On Friday or Saturday of each week Mr. V. disappears from Chicago to seek his rustic summer home in the glen and reappears here on Monday. Not far distant from the glen is a rock thrown up to a height of several hundred feet by some mighty convulsion of the earth, that has an interesting story connected with it. It is called "starved rock," and the story runs that a tribe of Indians was once forced to take refuge on this height from the other tribes that were warring against it. The position was impregnable, but the foes surrounding them kept guard below until every member of the tribe on the lofty rock had perished from hunger and thirst.

Toronto.

Mr. W. J. Stewart, secretary of the S. A. F. will pay a flying visit to Toronto next week to arrange various matters concerning the convention and obtain full particulars for the completion of the preliminary programme of proceedings. He has fortunately been able to time his visit so as to be present at the regular monthly meeting of the Toronto Gardeners' and Florists' Club on the 8th inst.

Mr. D. B. Long, of Buffalo, has also promised to run over on that day and talk over arrangements for a meeting of delegates from Gardeners' and Florists' Clubs during convention week.

Applications for space for trade exhibits are coming in apace, there is promise of a big show. Apply early. Mr. Thos. Mantou, florist, Eglinton, Ont., is the man to talk to about it.

Bowling seems on enquiry to have almost died out in Toronto, or rather it has been nearly crushed out by the efforts of some over pious people. At any rate it seems difficult to find a decent alley at this time, though I have no doubt one will turn up before long.

Weather has been beautiful here lately, warm with refreshing showers now and then; plants have got a grip of the ground now that will keep them going all summer. E.

Providence, R. I.

The June exhibition of roses and strawberries by the Rhode Island Horticultural Society was one of the prettiest and most successful ever given by the society, in spite of the unfavorable weather that prevailed. On account of the weather the exhibition was continued a day longer than intended.

Messrs. George Hunt, James Nisbet, Wm. Butcher and Wm. Hodgkins acted as the committee on plants and flowers and they made awards as follows:

Roses—For best 20 distinct named varieties, 1st N. J. Cady, 2d Roger Williams Park, 3d N. D. Pierce Jr.; for best 10 distinct varieties, 1st N. J. Cady, 2d N. D. Pierce Jr., 3d Roger Williams Park; for best 6 varieties, 1st N. D. Pierce Jr., 2d

Silas W. Manchester, 3d T. P. I. Goddard; for best 3 varieties, 1st N. D. Pierce Jr., 2d J. J. Cady; for best specimen bloom named, new variety, never before exhibited, Jeremiah Briggs; for hybrid perpetual, 1st N. D. Pierce Jr., 2d J. C. Nicholls; for hybrid teas, James Nisbet; for teas, William H. Haskell; for moss roses, N. D. Pierce Jr.; for tender roses, James Nisbet; for plants in pots, 1st Mrs. T. P. Shepard, 2d J. Sheldon & Co.

Cut flowers—For best collection of ferns, Mrs. T. P. Shepard; for native flowers, best varieties and best arranged, 1st L. F. Cran, 2d Mrs. Julia Addeman, 3d E. H. Wilson; for best arranged basket of flowers, Mrs. R. Jencks; for pansies, 1st John M. Lee, 2d E. A. Whiting.

For stand of cut flowers and ornamental leaves, 1st S. W. Lewis, 2d T. P. I. Goddard, 3d F. L. Gay.

For herbaceous plants, Mrs. S. A. Church; for basket of flowers loosely arranged, 1st Mrs. T. J. Hill, 2d C. W. Stephenson; for ornamental vase of flowers, 1st Mrs. R. Jencks, 2d Mrs. T. J. Hill.

Boston.

The hush of July is upon us and save for the occasional unfortunate who calls for funeral tributes the flower stores are deserted and still.

The growers with a regularity born of long and steady practice appear in town every morning although they have little to sell and nobody wants to buy, and they claim to be very busy yet with their new planting, new bushes and general repairs. Montgomery Bros. record two new houses at Wellesley this season, and the Waban Conservatories are also increased by the addition of two very fine houses. The tendency of prices during the past two years in this market is not calculated however to encourage much new building at present.

The Gardeners' and Florists' Club will hold its annual excursion and picnic on Tuesday, July 21. After a cruise down the harbor a stop will be made at Lovell's Grove, Weymouth Landing, where dinner will be served and various pastimes indulged in. The ladies will accompany them this time and preparations are being made for a grand time.

The following letter has been received:

WELLESLEY, June 13, 1891.

DEAR SIR: I beg to acknowledge the receipt of a very handsome vase, the gift of the gardeners and florists, and you will please convey to them my best thanks for the same, with the assurance that this kind attention to their part will be fully appreciated and valued by me.

Truly yours, H. H. HUNNEWELL.
To the President of the Gardeners' and Florists' Club of Boston. W. J. S.

News Notes.

DENVER, COLO.—Braun & Miller have dissolved. James L. Miller will continue the business.

OSHKOSH, WIS.—The fair and exposition of the Oshkosh Fair Association will be held September 21 to 25 inclusive. The association offers \$100 in cash premiums for plants and flowers.

WAVERLY, MASS.—The Belmont Horticultural Society held its annual exhibition of roses, wild flowers and strawberries June 26. A very excellent display was made. Dancing followed the close of the exhibition.

DENVER, COLO.—Mr. and Mrs. C. R.

Gallup are on a six-week's trip to Alaska. Mr. J. D. Carmody, of Evansville, Ind., is in the city. Mr. J. E. Beebe is visiting rose growing establishments in the east with the view of getting points for his new range of rosehouses.

LOUISVILLE, KY.—Jacob Schulz has a fine variety of water lilies in bloom now. They are attracting much attention as there have been few colored ones raised here. Nanz & Neuner are showing handsome colored poppies of great size. The twenty-four greenhouses of Francis Morat's Sons & Co. have been turning out large quantities of flowers.

ST. LOUIS.—The coming exhibition of the St. Louis Florists' Club will be held in the Music Hall of the Exposition building November 11 to 13. The club at its last meeting appointed an Exhibit Committee composed of Messrs. J. M. Jordan, Eugene H. Michel, John Young, Wm. Schray and Robert Tesson, and a Financial Committee composed of Messrs. John Young and Eugene H. Michel.

SYRACUSE, N. Y.—At the last meeting of the Central New York Horticultural Society, it was decided to hold a chrysanthemum show in November, the date to be fixed later. The prospects are that it will be the finest show ever held by the society. Many of the best new varieties have been bought by the members, and in spite of the long continued drought the plants have made a splendid growth.

BALTIMORE.—If there be not some beautiful specimens of fine chrysanthemums displayed by little Baltimore girls and boys at the flower show next autumn, it will not be for want of trying, for the children have taken hold of the suggestion made recently by the Gardeners' Club to admit them in the competition, and are going into floriculture with an eagerness and interest fully worthy of the cause. Members of the Gardeners' Club have received letters from parents, school teachers, and pupils in private and public schools and institutions, all expressing deep interest in the new departure. Children call upon the florists every market day to inquire about the new plan or to make requests for the free plants that will be later on distributed by the club. Among others, the head of a prominent institution wrote to the Gardeners' Club, inclosing a list of names of children who desired to enter into the competition, and stating that the institution "was anxious to encourage the love of plants, and to teach the children under its charge to care for them intelligently, believing such taste to be of real benefit in the formation of character, as well as giving much pleasure."

CINCINNATI.—The trustees of the Holroyd bequest of \$15,000 for the erection of an exclusive flower market house in the Sixth street market place, have adopted plans, and are ready to erect a handsome structure composed of iron and glass. Over the market proper is to be a hall for flower shows and other purposes. The trustees are ready to build, but it is rumored that as soon as they attempt to break ground they will be enjoined by a confederation of kickers owning or leasing property on both sides of Sixth street, between Elm and Plum streets. Now the city has, through the action of the council and the mayor, accepted the Holroyd bequest with all its conditions, and the question remains to be settled whether the city will resist the threatened injunction. The trustees of the bequest

declare that they will not budge in the matter. They consider their duty done and fully done in adopting plans for the flower market house and seeing them completed. If the city does not interfere and protect her own rights in this matter the trustees will annul the bequest, and the money will revert to the heirs, as the will and testament provide. Such an outcome will certainly be very unfortunate.

Coming Exhibitions.

July 22-23, Toronto, Ont.—Flower show Toronto Electoral District Agricultural Society. J. P. Edwards, Sec'y, 146 Wellington St. West.

September 1-4, Boston.—Annual exhibition of plants and flowers Mass. Hort. Society. Robert Manning, Sec'y, Horticultural Hall, Tremont St.

September 2-3, Galt, Ont.—Fall exhibition Galt Horticultural Society. Thomas Vair, Sec'y.

September 8-10, Hartford, Conn.—Fall exhibition Hartford County Hort. Society. Edwin A. Taylor, Sec'y, P. O. box 1015.

September 15-17, Boston.—Annual exhibition of fruits and vegetables, Mass. Hort. Society. Robert Manning, Sec'y, Horticultural Hall, Tremont St.

November 2-7, Louisville, Ky.—Chrysanthemum show Louisville Florists.

November 2-8, New York.—Chrysanthemum show Madison Square Garden. J. W. Morrissey, Sec'y, Madison Square Garden.

November 2-5, Hartford, Conn.—Chrysanthemum show Hartford County Hort. Society. Edwin A. Taylor, Sec'y, P. O. box 1015.

November 3-6, Boston.—Chrysanthemum show Mass. Hort. Society. Robert Manning, Sec'y, Horticultural Hall, Tremont St.

November 3-6, Milwaukee, Wis.—Chrysanthemum show Wisconsin Florists' and Gardeners' Club. W. H. Ellis, Sec'y, 133 Mason St., Milwaukee.

November 3-7, Detroit, Mich.—Chrysanthemum show Detroit Florists. Robert Flowerday, Sec'y, 460 John R. street.

November 4-6, Wooster, O.—Exhibition Wooster Floral Club. W. A. Porter, Sec'y.

November 5-7, Erie, Pa.—Chrysanthemum show Erie Chrysanthemum Club. H. Tong, Sec'y.

November 5-11, Bay City, Mich.—Chrysanthemum show Bay County Hort. Society. T. J. Cooper, Sec'y, 811 North Water street.

November 10-12, Pittsburg.—Chrysanthemum show Pittsburg and Allegheny Florists' and Gardeners' Club. C. Osterle, Sec'y, 508 Smithfield St., Pittsburg.

November 10-12, Newport, R. I.—Chrysanthemum exhibition Newport Horticultural Society. James Galvin, Sec'y.

November 10-12, Toronto, Ont.—Chrysanthemum show Toronto Gardeners' and Florists' Club. A. H. Ewing, Sec'y, Normal School, Toronto.

November 10-12, New Bedford, Mass.—Chrysanthemum show New Bedford Gardeners' and Florists' Club. Geo. C. Bliss, Sec'y, 34 Arnold St.

November 10-12, Washington, D. C.—Chrysanthemum show Washington Florists' Club. Eugene Cadmus, Sec'y, 1419 R St. N. W.

November 10-13, Philadelphia.—Chrysanthemum show Pema. Hort. Society. D. D. Eason, Sec'y, Horticultural Hall, Broad St.

November 10-13, Chicago.—Fall exhibition Horticultural Society of Chicago. James D. Reynolds, Sec'y, Riverside, Ill.

November 10-13, Minneapolis, Minn.—Chrysanthemum show Minneapolis Florists' Club. E. Nagel, Sec'y, 1116 West Lake St.

November 10-14, Indianapolis.—Chrysanthemum show Society of Indiana Florists. W. G. Bertermann, Sec'y, 37 Mass. Ave.

November 11-12, Worcester, Mass.—Chrysanthemum show Worcester County Hort. Society. Edward W. Lincoln, Sec'y, 5 Oak St.

November 11-12, Galt, Ont.—Chrysanthemum show Galt Hort. Society. Thos. Vair, Sec'y.

November 11-12, Montreal.—Chrysanthemum show Montreal Gardeners' and Florists' Club. W. Wilshire, Sec'y, 688 Sherbrooke St.

AWARDS AT EXHIBITIONS.

A method of making awards at exhibitions which Mr. J. M. Jordan tells us was employed at an exhibition in St. Louis last year, has a good many excellent features. Instead of offering first, second and third prizes in the various classes, a lump sum was offered for exhibits in that class. The entries were judged by points and the amount divided among the competitors in proportion to the number of points given each by the judges. For instance \$250 is offered for groups of decorative plants and there are five competitors, whose exhibits are decided to possess meritorious points as follows: A, 80 points; B, 65 points; C, 85 points; D, 50 points; and E, 70 points. Then A receives \$57.15; B, \$46.42; C, \$60.72; D, \$35.70; and E, \$50.01. These results are obtained by adding together the number of points given each of the entries and dividing the amount to be awarded by this sum. This gives the amount of cash to be given for each point and the amount due each one is quickly ascertained by multiplying this amount by the number of points the entry was judged to possess.

In the supposititious case given the sum of the points awarded (80, 65, 85, 50 and 70) is 350. Dividing \$250 by 350 we get \$.7143 plus; 80 times this gives us the amount A is entitled to: 65 times, the amount B receives, and so on.

This certainly seems to be a very equitable arrangement, the prizes being awarded in proportion to the exact degree of excellence each exhibit possesses, in the opinion of the judges. And Mr. Jordan tells us that at the exhibition where the plan was adopted it brought out a magnificent display, as each exhibitor was assured of receiving something. The men who felt that it would be useless for them to attempt to compete with large growers were not scared out of competition, for while they could not make as elaborate a display they were sure of receiving recognition in proportion to what they were able to do. And again if they happened to lose first place by only a few points, this slight difference in excellence made their proportion of the prize but a trifle less than the other, instead of a very great deal less as when an arbitrary amount is fixed as a second prize.

This system of awarding premiums at exhibitions has many good points to commend itself to our consideration.

At the St. Louis exhibition the competitors were themselves the judges. That is, all the competitors in a certain class acted together as a committee in judging each entry except his own, each casting a ballot on the point system. And this worked very satisfactorily. Some friction was developed in this case by making the one whose entry was be-

ing judged, the custodian of the ballots, and the ballots being signed he could thus see how each one voted; and if one of the party voted very low on his entry, he would be apt to "get back at him" by voting "way down" when it came his turn to pass upon the other fellow's entry. But with a disinterested person to act as custodian of all the ballots this objection was overcome.

INTEREST the newspaper men now in your coming exhibition. Endeavor to have placed before the public frequent notices of matters accomplished in the way of preparation. Send the editor a basket of flowers and with it a copy of your premium list. And when flowers are plentiful remember him frequently. A bunch or basket of flowers is a very pleasant reminder and always acceptable. A bald request for a notice comes harsh to the ears of the editor, but a basket of beautiful flowers, accompanied with some printed matter that will supply material for a notice, will almost always get there. Never beg, but don't fail to suggest. And when you get your tickets printed don't fail to send the editor a liberal allowance of complimentary, and don't slight the humble reporter, for if he fails to write a good report, your having the kindly feeling of the editor don't amount to a great deal. Once in a while you will strike an editor or reporter who is a pirate and who will endeavor to work you for all he can, but these are rare exceptions and are very infrequently found with journal's of influence and standing. But the outlay is small in proportion to the returns, so it pays to treat everyone well, pirates and all. And when the exhibition is open be certain to have some competent person at liberty to devote his time to the reporters, to explain anything he don't understand, to give him points for his report. Make sure that he does not leave the place without something to write about, for otherwise he may draw on his imagination or cut it mighty short.

WE HOPE that at the coming session of the S. A. F. the various essays will all be read by someone with a powerful pair of lungs and accustomed to speaking in a large hall. The men who can prepare the ablest essays are rarely good talkers and when they attempt to read their essays before such a large body as the S. A. F. sometimes but a small number of those in the audience are able to hear so as to thoroughly understand. This is not only very unsatisfactory to the listeners but much is lost to the society through lack of discussion of the essays, for how can anyone discuss the subject of the essay without having heard what the speaker has said? It has been said that to have the essays read by another than the author would destroy much of their individuality. Granted, but it is certainly preferable to be able to understand the essayist's views, even without his visible presence, than to be able to see him and hear nothing, or so indistinctly as not to understand him. If the essays were all type-written any good reader with a strong voice would fill the bill, even if he was untamilar with the subject matter.

DON'T FORGET that cost of production is one of the most important questions before the trade to-day. Do you know whether the geraniums you sold this spring brought you more than cost you to grow them? If you don't know, then you are playing "blindman's buff" rather than conducting a business on business

principles; and some day, while thus blindfolded, you will fall down stairs or out of the window. Yes. Of course. After you have grown the plants you had better sell them for 50 cents a dozen than to throw them away, but one experience of that kind ought to be enough. You said the same thing last year. Why didn't you profit by your experience? If you are growing stuff at a loss you must either reduce the expense of growing, obtain a more remunerative price, or quit. If your neighbors sell geraniums at less than the cost of producing, buy of them, if you need any, but don't be so foolish as to do such things yourself just because your neighbor does.

A PROBLEM that the Society of American Florists has had before it for years is the securing of a hall for the annual sessions which would be away from the noise of street traffic and still be of suitable size and accessible. In August the windows must be kept open for the purpose of ventilation, and the noise of heavy wagons rattling over stone pavements, the bells of street cars, and other noises of the street penetrate freely to the hall and are a serious annoyance. Hence members will be glad to learn that at Toronto we shall be free from each and every one of these unpleasant features. The sessions will be held at the pavilion in the Horticultural Gardens, where we will be surrounded by beautiful and peaceful landscape effects instead of crowded and busy city streets. We anticipate at Toronto a greater degree of pleasure in listening to the essays and discussions on same than at any previous session of the S. A. F.

A VERY FINE collection of tuberous begonia flowers has been sent us by Mr. A. C. Parfrey, Richland Center, Wis. One of the single flowers measures 6 inches across and several exceed 5 inches. The doubles range from 2 to 3 inches across. All are of good colors and we can readily believe that the plants make a fine display of bloom in Mr. Parfrey's greenhouse as he says they do. He has about a thousand plants in variety. The flowers sent compare very favorably with those previously sent us by others.

OUR ANNUAL convention supplement which will be published with our issue of August 13 will contain a sketch map of the city of Toronto on which will be prominently indicated the Convention Hall, hotels at which rates have been secured, and many other items of immediate interest to the visiting members. Advertisements for the supplement will be received at usual rates.

THE TIME for the annual convention of the Society of American Florists is approaching. Will you attend? Better begin now to shape your affairs so that you can safely leave your business for a week or so in August. The man who has regretted the time and expense of attending these conventions has yet to be found.

HOW DID your spring plant trade compare with that of previous years? We would like a report from every reader who grows plants for market and bedding.

JUST BEAR in mind that the AMERICAN FLORIST goes to everyone in the trade and when you advertise in its columns you reach every florist in America.

IF you have anything to sell to florists don't fail to place an adv. in our convention supplement, to be published with our August 13 issue.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTHOLES, Lawrence, Kan., president; A. L. DICK, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

MR. ROBERT BUIST will sail for Europe soon.

MR. W. ATLEE BURKEE was in Paris June 25.

MR. WM. MEGGAT will start for California about July 20.

ONION SEED in California from present outlook will be about 70 per cent of a full crop. Other seed crops are looking well.

MR. C. C. MORSE of Santa Clara, California, passed through Chicago July 1 on his return from a three months trip in Europe. Mr. M. is anxious for a representative man in the horticultural department of the World's Fair, and thinks California has taken more than her share in the classification.

Setting Day.

ED. AM. FLORIST.—I notice an article in a late AMERICAN FLORIST about June 1 being "setting day" among the seed trade, and it would perhaps be of interest to your readers, or at least some of them, to know whether June 1 is considered setting day or not. Some parties seem to think that June 1 is the date to send in statements, and that payment is allowable any time afterward; others contend that a statement is virtually an acknowledgment that the bill is due, and that a settlement should be made within a reasonable time. There being some controversy on this subject, your advice would be very acceptable. GROWER.

A Good Time with Mr. Maule.

Upon the invitation of Mr. Wm. Henry Maule, the Philadelphia seedmen and those interested in the trade visited "Briar Crest," Mr. Maule's residence, near Villanova, Pa. Every invitation was accepted. The trial grounds of hundreds of vegetables and flowers were highly interesting, and the scrupulous cleanliness of the entire place was commented upon. One very prominent seedman was heard to say that the "potato test" was the best he had ever seen.

"Briar Crest" is certainly one of the most beautiful places in Pennsylvania. Being situated on high ground it commands a magnificent view of the rich surrounding country in every direction. The hardy shrubbery, fancy bedding, elegant lawns and extensive stables, barns, lodges, etc., were all greatly admired.

It would take a full page of the AMERICAN FLORIST to describe all the interesting features of "Briar Crest"; they certainly were highly appreciated and complimented by the visitors.

Some of the Philadelphians met each other for the first time at "Briar Crest." There was no game of ball, but a regular game of "Puns."

One might have thought the Landreths and Bob Buist were "twin" brothers.

Mr. Ely claimed the trial grounds had been weeded out at night by electric light in preparation for this visit.

Mr. Maule's assistants both from the warehouse and the P. F. office helped entertain the guests.

Hail Insurance.

The man who first conceived the idea of organizing the Florists' Hail Association deserves the thanks of every florist in America. Nothing could be more beneficial. It gives the fortunate a chance to assist his unfortunate neighbor. The organization is one to which every florist who is careful to consult his best interest should belong. With the active co-operation of every florist, great and small, in America, the officers and directors can accomplish much. At the very low rates made by the association no florist can afford to carry his own risk. With five or six million feet of glass insured, their plants also could be insured.

The majority of the Cincinnati florists have not been awake to the real benefits to be derived from the association. Many of them seem to be waiting until the storm comes before they insure, and many claim they are not in the hail belt, which experience proves to be erroneous.

However, many now declare they will insure since the terrible storm of June 5. I am sure if those who hesitate could see our own place with nearly 10,000 square feet of glass broken, out of 12,000, they would soon decide. Unfortunately our glass was all imbedded in putty that is very solid, so we have quite a job cleaning the bars.

Considering the size of the job before us, we are inclined this time to glaze without putty, but use the putty ball well on top and maybe on the rabbet also. We would be thankful for any suggestions on this point. We have been agreeably surprised to see our roses doing remarkably well since the storm. We anticipated a heavy crop of mildew from such a sudden exposure, but not a particle has appeared. The roses speak for themselves; they want more ventilation in hot weather than they get from the ordinary ventilator in a fixed roof. Movable sash, where convenient, are excellent.

In conclusion we wish to thank the officers and directors of the Florists' Hail Association for the remarkably prompt settlement of our claim.

College Hill, O. CORBETT & WILSON.

OUR CONVENTION SUPPLEMENT will be published with the issue of August 13, and the map and directions it will contain will, we believe, be of considerable value to those attending the meeting at Toronto. Exhibitors wishing to call special attention to their exhibits will find the supplement a very effective medium.

Lewistown, Ky.

SURPLUS STOCK OF **ROSES** FOR WINTER FLOWERING

WHICH WE OFFER VERY CHEAP, UNTIL SOLD.

American Beauty, Bride, Perle des Jardins, Mermet, La France and Mme. Cusin,

Grown in 2½ and 3½-inch pots.

Our stock of these is in exceptionally fine shape, very healthy and in the best possible condition for planting. It is the same stock we use for our own planting, but grown in excess of our own wants. They are entirely free from mildew. The American Beauty is free from black spot, and all are in perfect health and perfect condition in every respect. Buyers will find it to their advantage to inspect our stock before purchasing. Write for prices.

WE EXCEL IN AMERICAN BEAUTY, WHICH IS A SPECIALTY WITH US, AND OF WHICH WE HAVE A LARGE STOCK.

We obtained first prize, two consecutive days, above all competitors for our exhibit of "American Beauty" at the flower show of the New York Florists' Club, held at the Lenox Lyceum in New York City, in April.

Postage on Plants, Etc.

In response to several queries regarding the rate of postage on plants, cuttings and cut flowers, we quote the rule of the postoffice department:

"The third class rate of postage now applies to seeds, scions, bulbs, roots, cuttings, and plants."

The rate of postage on third class matter is: "One cent for each two ounces or fractional part thereof, and must be fully prepaid by stamps affixed."

As will be seen, cut flowers are not specifically named among the articles noted as subject to the third class rate. And whether they come under the heading of "cuttings" seems to be open to construction.

It would probably be well to ask for a ruling from the Postmaster General on this point. If this has already been done by any of our readers we should be pleased to be made acquainted with the result.

They Suggest Ideas.

Ed. AM. FLORIST.—Having read your valuable paper for several years, I should like you to know that your suggestions and remarks about cut flowers are especially helpful, not only to the florists but also to their employees to whom the designing is so frequently left. We much appreciate the articles written by Messrs. F. S. Matthews and H. H. Battles. The cuts of baskets and designs we look at with interest; it is quite natural that every one who loves flowers, will study to use them to the best advantage, but reading of or seeing others' ideas or work will often suggest ideas of our own, and thus we go on further and better. I trust you will keep on giving us at intervals a sketch of this or that piece of artistic work. Accept hearty thanks for what you have already done.

F. J. L. MORT.

Louisville, Ky.

[We print the above for the benefit of some of our readers who find some of the arrangements we illustrate too elaborate for their purposes. They are not all intended as models to be accurately copied but as suggestions.—Ed.]

ADDRESS:

AMERICAN FLORIST Co.

54 La Salle Street, CHICAGO.

For Boy Graduates.

No doubt other florists have, like myself, been in a quandary for something suitable for the boy graduates. For the girls we can always find something pretty: graceful long-handled baskets, or loose bunches tied with ribbon. But neither of them is just the thing for boys. This year I had some handsome leather book-covers made, with the class motto stamped in gold on the side, and "Congratulations, Vol. '91" on the back. These I filled by dropping the stems of the flowers between the covers, so that the blossoms protruded in careless, graceful profusion, and tied the covers together with ribbons that matched the flowers. They were pretty and appropriate, and while is better for the florist, sold well, and cost no more than fancy baskets.

Duluth, Minn. L. S. SWANSON.

Is He a Professional?

To give my opinion in regard to the article, "Is He a Professional?" I would term this class either semi-practicing, or income assisting florists, as in my own case.

I am a paper box maker by trade and have been working at home for the past ten years making paper cases for confections and table decorations, but for the last two years my earnings have been so declining that they are not enough now to support wife and child. I have always been raising plants for our garden and little conservatory. Last winter we had so many flowers that some people were inquiring whether we had them for sale. Now we have come to the conclusion to try it as a business, in order to have an extra income. We are getting a greenhouse built now; will stock it with one kind of plant, and commence to sell cut flowers next winter. If it should prove a success to warrant an extension of the business, I might turn a professional florist then. T. L.

The Mealy Bug.

Is there any reliable remedy for the pest known as the mealy bug in the greenhouses? All applications seem to be nearly worthless except hand picking. We have tried all the advertised mixtures and are disgusted. How will the gas from cyanide potassium and sulphuric acid work in them, and can it be safely used by letting it have possession of the house over night and thoroughly ventilating the house the next morning? Would it be dangerous for the gardener to go into the house to ventilate it the next morning? I am fully aware of the deadly effect. I have used the cyanide jar to kill my specimens for the past three years.—H. L. Jeffrey, Woodbury, Conn., Nov. 27, 1890.

Reply.—Hydrocyanic acid gas, produced in the way which you mention, is being extensively used on the Pacific coast as a remedy against scale insects. Entire orange trees are covered with tents, and the acid is manufactured under the tent. I am not aware, however, that it has been tried in greenhouses on the scale which you suggest, but am inclined to think that there would be some danger in its use in this manner.—*Insect Life.*

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

EXCELSIOR STANDARD FLOWER POTS,

With Patent Ventilated and Perfect Drainage Bottom.
We beg leave to call your attention to our CARD. EXCELSIOR STANDARD POTS. You cannot well afford to be without them, as they are especially adapted for growing Chrysanthemums and all valuable plants.

FIRST CLASS CERTIFICATE OF MERIT
AWARDED WHEREVER SHOWN.

We still carry in stock a full line of the regular "STANDARD" POTS.

When writing for price list state sizes and quantity wanted.

Price List sent on application to

STANDARD FLOWER POTS

—AND—

JARDINIERES IN GREAT VARIETY.

NOTE.—Our new Catalogue for the Fall of 1891, containing illustrations of New Jardinieres especially adapted for Standard Pots is now ready and will be sent on application.

A. H. HEWS & CO., CAMBRIDGE, MASS.
Mention American Florist.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equalled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and WEIGHT of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/2 inch.....	3,000	350 lbs.
2 ".....	2,400	250 "
2 1/2 ".....	1,750	250 "
3 ".....	1,450	250 "
3 1/2 ".....	1,250	350 "
4 ".....	800	350 "
4 1/2 ".....	600	350 "

It will be seen at a glance, that our pots are one-third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **SEND FOR PRICES.**

Summer Flowers Suitable for Cutting.

BY G. C. WATSON.

[Read before the Florists' Club of Philadelphia at the July meeting.]

The kinds of flowers which the florist wants from May to October are those which are lasting when cut and have good long stems for cutting. They must be showy and free-flowering, as well as graceful and refined in form. They must also be of easy culture, such as will grow in ordinary soil in an ordinary border without any special cultivation. There are flowers innumerable which are useful for decorative work in the summer garden, but which are entirely unsuited for cutting. Many of the most beautiful are so fragile that they wither up almost as soon as cut; many more have such short stems, or the flowers are so crowded into dense heads that they can neither be readily utilized in bouquets nor put in vases. Keeping the prime requisites of a first-class flower for cutting before us and running all the varieties we can think of in review, it will not be long before we realize how few are the real gems that we can point out as possessing every necessary characteristic, and it is, therefore, not surprising that we should be earnestly on the outlook for useful subjects suitable for summer cutting. In the list which follows all flowers which cannot be advantageously used for cutting have been rigidly excluded and shrubs and trees have not been mentioned because, although some of these are useful, they do not come within the scope of the present inquiry, which is confined to herbaceous plants and such annuals and other flowers as may easily be raised in an ordinary garden.

The list commences with a well-known flower greatly appreciated in many sections for cutting, but which is not so largely grown in this neighborhood as it ought to be, namely, the *Achillea ptarmica* fl. pl., or double white yarrow. It flowers all through the summer and produces its perfectly double pure white flowers in the greatest profusion—a very fine perennial and of the easiest cultivation. Another fine variety of this family, *Achillea millefolium roseum*, is worthy of recommendation. It flowers freely for several months. The *Anemone* family is an extensive genus and many of them are useful to the florist for various purposes, but the variety which is the most valuable in the present connection is *Anemone* to November, and it is, moreover, one of the very finest of the fall flowering perennials we possess. Perfectly hardy and so robust that the flowers even will bear considerable frost with impunity. This splendid perennial cannot be too highly recommended. Another excellent perennial is the *Aquilegia chrysantha*, which produces its beautiful primrose-yellow

flowers quite frequently. Almost all of us recognize the value of asters for cutting. We cannot have too many of them. And if I may be permitted to make a suggestion, they ought to be used more in succession than is at present practiced. Mr. Zirnigebel commences marketing his asters in the middle of June from seeds sown the previous December, and the prices they bring at that season will repay him for the extra attention inculture. By successive sowings asters may be had in flower all summer from June to October, the latest sowings, about the middle of May, being sown in the open ground. The most popular sorts, by long odds, are the improved *Victoria* strain and the improved *Paony* flowered. The colors most useful are white, pink, scarlet and blue, in the order named. Perennial asters (*Asters* proper, or *Michaelmas* daisies) are not much grown, but there are several of them that make good subjects for cutting. For instance, *Aster alpinus*, both the blue and the white forms of this have fine dwarf habit and good, long stems. *Aster altaicus*, light blue; *Aster bessarubicus*, deep blue; *Aster dracunculoides*, white, and *Astericoides*, white, may also be mentioned.

Double balsams, although lacking one of the characteristics of the perfect cutting flower, are yet so valuable that they are largely grown for floral work. When well grown and a good strain they are exceedingly valuable for summer and autumn blooming. The *Camellia* flowered section is the most popular, good flowers being as double as a *Camellia*, and often almost as perfect in petal arrangement. The *Browallias*, both the white and the blue, are well worth growing. They give very neat sprays of flowers, which are very useful in bouquets, and they are also very useful for winter and spring flowers. There are several of the large family of *Campanulas* that are good cutting flowers, one especially being worthy of mention, namely, the *White Carpathian Bell-flower*, a beautiful and most graceful perennial, flowering from June to August. "Marguerite carnations," a distinct new race, with double flowers and in various colors, are a valuable addition to our list of summer subjects for cutting. They are somewhat after the style of the "Grenadin" carnations, which are very popular and still growing to a considerable extent. The "Marguerite" form is exceedingly early flowering, commencing to bloom in August from April-sown seed. "Sweet Williams" and "China pinks" are invaluable, the single form of the former and double form of the latter in many colors. A special word of praise must be given to the *Heddeewigi* section of the *China pinks*, especially the double forms. They are exceedingly neat, and bear large flowers of brilliant colors. The old-fashioned "garden pinks" (*Dianthus plumarius*) are also good and very hardy.

Catananche cœrulea and C. lutea are excellent annuals for cutting, very pretty and free flowering, and with fine, long stems. The Centaurea cyanus, or corn flower "blue", as the blue variety is sometimes called, is among the best of our summer flowers. The colors range from white to deep rose, and are quite popular. Mr. Battles informed me that the "blue" is the popular flower this summer. The name "blue" is also applied to the Houstonia cœrulea, an elegant little perennial with light blue flowers on stems about four inches in length. Flowers early in summer and may be propagated by divisions of the root in autumn or by seeds. It cannot rank very high as a cut flower however on account of its small size. The yellow centaurea, C. suaveolens, was very popular around Boston a year or so ago, and may be so yet. It is an excellent annual, very fragrant and free flowering, and of fine, graceful form. The annual chrysanthemum, many of them are quite useful. The following are among the best: C. carinatum and its varieties. The flowers are single, and some of them distinctly and beautifully marked. Lord Beaconsfield is one of the prettiest. A double form of this, in various colors, hails from England, and is said to be very fine, but I have heard no report as yet from those who are trying it here. C. coronatum, double yellow and white; C. frutescens, single yellow and white (or Paris daisies, as they are commonly called); C. leucanthemum, or ox-eye daisy, single white, and C. segetum grandiflorum, single yellow. All these are good, and are grown more or less. Among the coreopsis the lanceolata, a perennial, is the most popular, but there are several others that are worthy of more attention than they are now receiving, for instance, verticillata, grandiflora, cardinaliflora, tinctoria. Cosmos—a Mexican annual—a greatly improved form of bipinnatus, has been grown for two or three years past, and is now very popular for cutting. Its graceful, clean cut flowers are charming for vases, etc. They resemble the single dahlia, but are far more slender and beautiful. Easily raised from seed. Cuttings struck in August make fine dwarf plants for removing indoors in November, and will flower for quite a while. Smith's "White Pearl" is a beautiful new sort, of the purest white, very refined in form and a free flowerer. The other colors of the improved American hybrids are rose, salmon, and purple. These hybrids, by selection and good culture, have already been brought to a high state of perfection and are still susceptible of further improvement in the way of color and otherwise. Cladifolia dahlia, more especially the improved single forms of the latter, are very useful for cutting. Among the delphiniums the following are most popular: D. cardinalis, scarlet; D. formosum, deep blue; D. grandiflorum, various colors, and D. nudicaule, red and yellow. Besides these, there are numerous very handsome hybrids, which deserve to be much better known. The annual varieties, or larkspurs, are also showy and useful, and are very easily raised from seed.

Euphorbia corollata; there are few plants so valuable for cutting as this. It is a gem, covered all summer with pure white flowers. Perfectly hardy and, once established, continues to flower year after year, furnishing an endless supply of flowers for bouquets, etc. A perennial, propagated by root division. Gaillardia Lorenziana has fine heads of crimson and yellow flowers, and is most excellent for

cutting. It is an annual and usually raised from seed, yet it is claimed that plants from cuttings are much superior. I saw Galega albiflora grown as a pot plant last summer. It has beautiful racemes of pure white pea-shaped flowers, and ought to make a good outdoor subject for cutting. Iberis coronaria, the "Rocket Candytuft," is largely grown for cutting. There are several improved forms, among the best being "Giant Snowflake," "Zirngiebel's Giant," and "Dobber's Spiral." The Iberis sempervirens, or "Evergreen Candytuft," is a splendid sort. It is a perennial, flowering in spring and summer. The flowers are pure white, produced in long racemes. One of the finest perennials in cultivation and should be grown by all who need white flowers in spring or summer.

The Gypsophila paniculata, or "baby's breath," has been recommended for mixing in bouquets. It is charming in a bunch of pink sweet peas, its small white flowers giving an airy grace to the larger blossoms that is very effective. There is another plant, called Isopyrum thalicroides, with flowers very much resembling the gypsophila, but with the added charm of beautiful foliage, resembling that of the "maidenhair fern." Both may be propagated by division or seeds. In sweet peas the three most popular colors are pink, white and scarlet, in the order named. The variety known as "painted lady" is a good pink, and there are two or three other pinks advertised, which are said to be improvements. Blanche Ferry is the only one of these I have seen, and is very good. Nellie Janes, and also a form advertised by a Boston grower, I have not seen, but they are highly spoken of. Invincible scarlet and cardinalis are good scarlets. The ordinary white is the only one of this color, in the opinion of Mrs. Sankey, one of Mr. Eckford's offered last season, which is an improvement in size and of fine form. It is so expensive, however, that very few could have a chance of doing anything with it. 25 cents for 25 seeds of sweet peas is rather rich for us, fond as we are of expensive luxuries. There was another of Mr. Eckford's novelties the year before, called "Queen of England." It did not differ from Mrs. Sankey's as far as I can make out—same color, and same form, and same price. There are a great many other colors useful for variety, but the three first named are the standard sorts. A good yellow would be an acquisition. The variety called Orange Prince is not yellow, but a pinkish orange.

Leptosyne maritima resembles a single dahlia and is closely allied to that genus. The flowers are yellow, about three inches in diameter, the disk occupying one-third. Not so elegant as C. lanceolata, yet a good useful plant for cutting. Perennial, but easily raised from seed. Blooms the first year. Lupinus Cruckshanksii, L. polyphyllus, L. nanus and L. nortkatisensis are among the most ornamental of summer flowering plants, and are of such easy cultivation that it is a wonder they are not more largely grown. There are numerous beautiful sorts in the lupin family besides those mentioned that are worthy of a place. Double white matricaria is a good deal grown in some places and it is a very pretty white flower, very free blooming and of the easiest cultivation.

A small growing single sunflower (Helianthus cucumerifolius) is excellent, and has been grown quite extensively for several years. It is easily raised from seeds, and should be in all collections. Helianthus multiflorus fl. pl. is the best of all the

double sunflowers for cutting. It is a perennial. Perfectly hardy, and one of the finest and showiest perennials in cultivation. Ornithogalum arabicum is a very showy, bulbous perennial, most excellent for cutting. It does not flower quite so freely grown out of doors as when treated as a pot plant for winter flowering. O. nutans and O. pyramidalis are good varieties, both white. Speaking of these reminds me to mention the summer flowering hyacinth (Galtonia candicans), another bulbous rooted perennial with long spikes of beautiful pure white flowers. A prominent grower recommends the herbaceous peonies, and for some purposes these are doubtless excellent. They are certainly extremely showy, and as they flower in May and June, at a time when there is a dearth of good cutting flowers, they will come in handy. They are fragrant and good shippers, too—two important points. Peonies can be forced in winter. Why wouldn't they make good Easter subjects? P. tenuifolia, for instance, would be a handsome thing if well grown specimens could be produced at that time. Everybody likes pansies, and I regret they can not be classed among "summer flowers for cutting." They are good for spring and fall, however.

There is also a fatal objection to most of the poppy family—the flowers are not lasting. P. alpinum and P. nudicaule stand up pretty well, however, and should be given a place. Amongst popular perennials the pentstemon holds a very important place, and in addition to their decorative qualities they are most excellent for cutting and must be given a prominent position for this purpose. There are quite a wealth of varieties to make a selection from, and the following are recommended especially, P. barbatus and P. b. Hartwegii, P. Hartwegii, P. monardii and P. venustus. These are all distinct species, and there is also a race of garden hybrids, a selection of which should be in every collection. Phlox decussata in its various colors is a useful perennial and well worth cultivating.

One of Mr. Thorpe's pets is the Giant Ox-eye Daisy (Pyrrethrum uliginosum), a handsome perennial, with white flowers, two inches in diameter, borne on graceful, bending stems. Quite a free flowerer and very showy plant for the border, outside of its great utility for cutting. Mention has been made of the Helianthus cucumerifolius and there is another class of plants, the rudbeckias, that resemble this sunflower rather closely and are too good to be omitted from our list. The best sorts are R. grandiflora, R. maxima and R. speciosa, all of them excellent for cutting—and very useful in the garden.

There are quite a few more good flowers for cutting that are worthy of extended comment, but which must be passed with a mere enumeration. For instance, zinnias, great favorites with some; scarlet sage, sweet rocket, marigold, mignonette, alysium, senecio, montbretias, tritomas, fair maids of France, mourning bride, gaura, schizopetalon, valerians, sternbergias, Swan river daisies, baptisia, cœcilia, Cynoglossum cœlestium, venedium, tropæolum, etc. The list might be extended considerably, but I think any florist who grows all of those mentioned will be able to cut good flowers almost every day from May to October.

WHEN you write an advertiser tell him that you saw his advertisement in the AMERICAN FLORIST.

SPECIMEN HYDRANGEA

Specimen Hydrangea.

The illustration shows one of the 26 hydrangeas, half of which were shown by Mr. Julius Roehrs and half by Mr. James Dean at the exhibition of the New York Florists' Club.

The plant shown was in a 10-inch pot and measured three feet across the top, and 28 inches from the ground to the top of the highest head of bloom. Each flowerhead would average ten inches across. Every plant was a masterpiece.

JOHN THORPE.

The Flower Garden.

BY J. A. PETTIGREW.

[Read before the Horticultural Society of Chicago July 11.]

Lovers of the beautiful and natural in gardening will note with pleasure the obvious tendency of thought and effort toward a restoration of the old-fashioned style of gardening. The old-fashioned flowers of bygone days, so dear to the memories of most of us and so replete with old associations, are being brought from the garden of the cottager, where they have been content to hide and bide their time. Many of their almost forgotten faces are now again to be seen, seemingly to us all the sweeter for their long and undeserved banishment.

The object of this paper is the encouragement of this tendency in the direction of natural gardening, and the endeavor to curb within reasonable limits the mad race after floral and artificial effects as depicted in the "bedding out" of the modern flower garden.

This artificial style has now long prevailed almost to the utter exclusion of

any other form of decorative gardening. The sweetness, beauty and variety of the old-fashioned garden borders succumbed to glaring masses of color or to intricate designs of geometrical or carpet work. Nowhere could be found the old quiet nook where familiar floral pets could be watched and waited for. A gardener's proficiency was too often measured by his ability to design monstrosities in floral decorations, while skill with the sheep shears has ranked as knowledge of the culture of plants. The reason for this would be hard to find. It certainly was not on the score of beauty, appropriateness or good taste. The painter selects his floral subject not from the geometrical garden or the flaming parterre; he prefers the more natural beauty of the woods and fields or the sequestered garden corner. Why then should we, who demand nature in art, tolerate art in nature?

The old-fashioned flower garden commands itself for the opportunity it presents for the cultivation of a great variety of plants and in its long continued season of bloom; from the first peeping of the snowdrop through the snow until the last Christmas rose is gathered, what an endless array of beautiful forms greet us from day to day and from month to month. Such variety and long-lived beauty is not obtainable in the parterre or ribbon border where scarcely more than a dozen species of plants enter into the most elaborate display, and where the season is limited at most to three months of summer.

As an educator the old-fashioned garden further commends itself to us; among its borders teeming with such variety, a comprehensive knowledge of plants can be

acquired. A part may be devoted to experimental work, such as testing the hardiness and conditions necessary for growth of trees, shrubs and plants that may be new or of recent introduction. Such a pursuit is fascinating and tends greatly to strengthen the love for plants, apart from the value of the information obtained. Nothing need be banished from the garden but pestilent weeds. Each expedition to the woods or hills may be the means of adding some member of the floral family to its fold.

The culture of old-fashioned garden plants is a pleasure that can be enjoyed by anyone possessing a garden spot. No expensive glass houses are needed for winter protection. The hardy class once planted with care will increase and at each division and replanting sufficient spare stock will be found for exchanges. A frost proof cellar will suffice to protect many plants of exotic extraction when of tuberous or bulbous form of growth. Other and many beautiful tender plants can be produced from seed in the open border with little expense and some trouble. Love, however, lightens the labor of those who follow the pursuit of gardening for the pleasure to be found therein.

The aquatic garden comes within the scope and design of the natural and is one of the most interesting and fascinating forms of gardening, as well as one of the most beautiful. Water adds a charm to any landscape, and the charm is intensified when its surface is studded with the blooms of the *Nymphaea* or *lotus* embossed in their rich green and luxuriant foliage. Many and varied are the forms of aquatic growth that are available by their grace or beauty for the embellishment of the aquatic garden, and all are beautiful.

The aquatic garden, to bring out its full beauty, should, like a jewel, have a proper setting; one should enhance the charm of the other. Such a setting may be of the character of the wild garden. The sheet of water need not be so large as to make recognition of the plants in the center difficult. The edges of the pond or lakelet may be irregular in outline and elevation, with here and there a rock or root protruding through the surface, and surrounding it may be an undulating, or, if circumstances favor, a broken piece of ground, with a background of trees or a rocky cliff. The ground may be partly rock covered; other parts may be of grassy sward; again, another spot may be covered with shrubs and herbaceous plants, all carefully planted and of native kind, as are the parts for hidden rocks and the vine-covered stumps and roots. The tasty and skillful gardener will be able to carefully nurture and train the plants in such a spot without betraying any evidence of his work, so that while all the advantages of culture are enjoyed by the plants, the natural wild beauty of the picture is not destroyed.

It scarcely comes within the scope of this paper, nor is it possible to formulate any general rules for the establishment of a flower garden, so many and varied may be the existing conditions; soil, aspect, topography and surroundings, all have to be studied. A blending of the component parts of the scene has to be accomplished without permitting any incongruity to enter into the arrangement. However, it may be said generally that an old-fashioned garden should have a background of trees and shrubs, the line of which should be curved or broken. The line of the border should harmonize with

the foliage line and the foreground should be of turf, well kept. Beautiful effects may be produced under the trees and shrubbery by planting bulbs for spring flowering, such as crocus, narcissus, hyacinths and snowdrops, together with ferns and cypripediums and wild phloxes, hepaticas and trilliums, too, should not be overlooked for early spring flowers. Many others do equally well in partial shade, and will amply repay the labor bestowed.

The border arrangement should be with the tall plants next to the shrubs at the back, down to the dwarf in front, yet planted with such designs as to produce, as nearly as possible, the impression of spontaneous growth. Avoid formality. Plant species or varieties in clumps of size to show the plants in their individuality, and not dotted and repeated frequently throughout the border.

It is not necessary to enumerate the plants to produce a succession of bloom. The list to choose from is rich and varied. Suffice it to say that commencing with snowdrop, narcissus and hyacinth bulbs in spring until the last Michaelmas daisy or anemone or gentian is gone, a constant kaleidoscopic succession of rich and beautiful effects may be produced, ever varying and changing as the months roll by.

Much more might be written on the subject, but it is hoped enough has been said to stimulate or strengthen a little the desire to be natural in gardening.

Seasonable Notes.

The season has now arrived when the planting for next season's produce should be attended to. Before doing so there are a few items which should be carefully considered. The first is, what varieties are most in demand in each respective locality, and can they be successfully grown with profit? If so the growers should confine themselves almost exclusively to such. But in some cases the special varieties most in demand will not succeed as well as others; in all such cases it is better to select varieties as nearly resembling them as possible and which will grow and flower good in soil at command, always providing that they can dispose of them profitably. This is a very important item with all growers and where a correct account is regularly kept of all the varieties grown (which should always be done by everyone) it will be a very easy matter to decide which are the most desirable varieties to grow and what not to grow. Another consideration is rather important. That is, if your soil is not suitable to grow the varieties most in demand, will it pay you to procure soil from some other point that they will grow in? Oftentimes the addition of a little clay to a light soil will make considerable difference to the produce, or if the soil is very heavy the addition of a portion of lighter soil will be very beneficial. But this matter can only be determined by each grower testing it for himself.

It may be and often is very desirable to try some of the newer and improved vari-

eties, as it often happens that they prove very desirable acquisitions to those already in stock. By this I do not advise buying indiscriminately all that is offered as new and wonderful, but select such as you think will suit your purpose and try enough of them to get a dozen or twenty buds at a time, then by showing them to customers it will soon be found whether they will take or not. No lady can judge of the quality or desirable coloring in any flower with only two or three blooms to examine, but give them 15 or 20 nice blooms and the effect is altogether different.

Many, very many times the real artistic merit of a choice rose is destroyed by being placed with others with which it will not harmonize, more particularly if three or more colors are placed together. The matter of blending or harmonizing colors in flowers is a matter with which very few of us growers are really conversant and is a subject which Mr. Battles and others can still give us many good points upon. I have read the articles in the *FLORIST* upon colors with much interest and hope to see some further light thrown on this subject.

But to get back to the subject of growing roses. After having made a careful selection of the varieties most suitable to the respective requirements, lose no time in getting ready to replant. However, before doing so it is very desirable to thoroughly clean out the old stock, then clean and sweep out every particle of rubbish both from the benches and floor underneath, next give all the boards (not painted) inside the house a good coat of hot lime wash. This acts as a good preservative of the boards from rot and destroys any insect life that may be adhering to the boards, besides giving the house a much cleaner and brighter look, and in the dull days in winter it will make the house considerably lighter; which will be found a great advantage to the plants. This done get the soil in as soon as possible and prepare to plant your roses.

AZALEA—ILLUSTRATION NO. 1

For the last three or four years we have not used more than from 2½ to 3½ inches of soil in any of our benches and find it an abundance for all purposes, but the soil used should always be fresh or new soil in which no roses have been grown for several years. That from an old pasture free from trees, is always the best, but where this cannot be had then get the best fresh soil at command. Mix with a portion of manure according to what the soil requires. If it is of fairly good quality one part thoroughly well rotted cow or sheep manure to eight of soil is plenty; turn this over two or three times to thoroughly mix it, then it will be ready to put on the benches.

The next thing is to plant them; in doing this we have found that most of the leading varieties of teas do well planted at from 14 to 15 inches apart from plant to plant; this of course will somewhat depend on the variety and strength of plants; this last item is of more importance than many think; really good strong plants will pay in one season nearly double what poor weak plants will and it is certainly a good investment to have the former when replanting a house. Some think the young stock can be grown on (for the coming season's supply) among the plants which have already filled the house, the result of which is often total failure.

JOHN N. MAY.

Azaleas.

Illustration No. 1 shows a round headed specimen 3 feet in diameter and 3 feet 6 inches high. It was exhibited by Mr. Jas. Dean at the New York spring show. It had no less than a thousand and ten flowers open at the same time, solid red in color, and most effective.

Illustration No. 2 shows an entirely different shaped plant, exhibited by Mr. R. Brett. It was cone-shaped, 4 feet high and 2 feet 6 inches through at the base. A fine specimen, white splashed with pink.

AZALEA—ILLUSTRATION NO. 2.

A great deal of comment was made upon the distinct style of training. Mr. Dean's plant was as trim as shears could make it. Mr. Brett's was loose and more naturally grown. The aesthetes went for Brett, the economics went for Dean. This reminds me of the great azalea contests held in England between Messrs. Veitch and Turner during 1862 to '66. Their giant pyramid plants were 8 feet high and 6 to 7 feet at the base. One year they were as closely cropped and tied as Mr. Dean's plant, then the next year a little more relaxed, yet a little more the next and ultimately a general flowing outline ruled. And my! How handsome they were! Life is worth living 50 years to have seen those masterpieces of culture and skill.

We should have such azaleas at the World's Fair. We must have some good azaleas, if not equal to these I have described.

JOHN TIMPKE.

Long Island Notes.

BY WM. FALCONER.

ASPARAGUS PLUMOSUS is figured in the *Gardeners' Chronicle* June 20th, and we are informed that the proper name of it is *A. decumbens*.

WHITE YUCCAS AND SCARLET CANNAS.—A bank of *Yucca filamentosa* in full bloom with a broad belt of scarlet flowering dwarf cannas beside it is a very striking sight, and one I had not thought of when I planted the cannas. It was a happy accident.

MAGNOLIA GRANDIFLORA VAR. EXON-

SENSIS is a garden form that was raised in England a good many years ago; its chief characteristics are hardness, copiousness, and the property of blooming when the plants are quite small. And this is why for a month past we have been enjoying some of the finest magnolia flowers I have ever seen.

MARIE LEMONE is the earliest of all our gladioluses, reckoning from the date of planting till blooming.

SOME YEARS AGO our lilies (*Lilium*) took the disease, and many of them perished. To save the balance I lifted them and planted them in fresh ground. *L. Krameri*, *L. Leichtlinii*, *L. testaceum*, *L. tenuifolium*, *L. candidum*, *L. longiflorum*, and a few others failed to recover; but *L. Thunbergii* and *L. speciosum* in variety have recuperated splendidly. *L. Batemanii* completely, and so, too, has *L. Browni*. And strange to say, *L. Hansonii* has never had the disease.

CRAB GRASS.—The only way to kill it out in sod is to pasture the land close; after a couple of years of bare pasturing, sods from such land will be a pleasure to lay.

ANTHEMIS CORONARIA FL. PL., raised from cuttings last spring and planted out in rich, porous soil in May have bloomed splendidly, and they have grown well, broad and bushy. But the great trouble with this plant in summer is that a plant every here and there keeps failing, rendering the mass quite patchy. The leaf miners were very hard on the stock plants last spring.

THE FINE FORMS OF THE Paris daisy (*Chrysanthemum fruticosum*) make capital bedding plants. The plants are all of equal size, and smothered in white daisies.

CANTERBURY BELLS.—Don't forget to sow some for next spring. Now is the time to put in the seed. The *calcanthemum* strain is the best.

CANNA MME. CROZY is behaving herself splendidly. She is growing well, blooming well, and what is surprising to me, seeding well. Four feet high, very stocky and vigorous, with a strong branched flower spike from every shoot, and very large, full, scarlet blossoms, distinctly banded with gold. She is a gorgeous flower.

WHY DON'T CANNA seed all germinate? Because you don't file a tiny hole in their side before you sow them, somebody may answer. Maybe so; anyway, don't blame the seed for that which we ourselves save is just as refractory as what we buy in the store.

WILL CANNAS bloom the first year from seed? someone may ask. Let me answer, of course they will and indeed they won't. Seedlings of *Canna Louis Chretien*, from a sowing made last February, have been in bloom with me for a month, others of the same sowing are not yet in bloom, and lots of the seeds haven't come up yet.

I SOWED GLADIOLI seed out of doors in May, and it hasn't germinated yet, but this is owing to the dry weather, for of the same seed sown the same day in a shaded cold frame a full crop of seedlings are up and doing well.

MIGNONETTE.—I'm sick and tired of growing everything in the way of new varieties that comes out. My experience this year is as it was last, that *Machet* is the finest mignonette that I have got and *Golden Queen* (for summer work) is next. *Machet* is as fragrant, too, as any of them. But why is it so dear? With me it sets and holds its seed well, and we can gather quite as much seed and as easy from it as from any of the other kinds.

IF YOU HAVE any plants in pots plunged out of doors, be sure you give the pot a twist around or a lift, and set back again every week or two to prevent any free rooting through the bottom of the pot into the ground, and serious check later on.

IF YOU GROW *FIERESIAS* you probably have got a great many large bulbs and a good many small ones, and now they all are at rest. Well, you can do most anything you please with your big bulbs. You can get them into bloom early or late or intermediate, just as you choose. But have a little consideration for the small bulbs. Put or box them off at once, and let them start to grow as soon as they like; the longer growing season they have the bigger will the bulbs grow, and you can better afford to encourage them now than give them house room towards spring.

Committee on Pronunciation Wanted.

Now that we have a nomenclature committee, why may not we also have a committee on pronunciation?

For a starter I would like such a committee to give me the correct pronunciation of *clématis*, *gladiolus*, *pelargonium*, and *Niphetos*.

After these have been passed upon I have a lot more to submit. M.

ALWAYS mention THE AMERICAN FLORIST when writing to advertisers.

For Toronto.

Mr. Ewing justly says I can tell the American florists something about Toronto. Here it is:

Previous to going to Buffalo I thought of annexing Canada, especially Toronto, because I had heard of Chambers, of Foster, of Vair, of Saunders, of Mantons, of Joe Rogers, of the Cottrells, the Summers, the Steeles, and the Flemings, and wondered why they were living in that cold, neglected, forsaken country.

When I arrived at Buffalo Mcpest said, "You'll like Toronto;" Dan Long said, "You will see a beautiful city;" John Covell said, "Be sure you see Saunders and George Vair; if you do you will have a pleasant week's visit;" Great Scott said, "John, first of all, when you get to Toronto, register at the Queen's Hotel and then ring for John Chambers," which I did, "then," says he, "hunt up George Vair and Saunders and Johnny Dunlop and Ewing and Heuston and Tommy Manton. Then ask them to give you the names of the best establishments to visit," which I did. So I "arrive," and was amazed at the substantiality, at the repose, and the sterling appearance of the buildings, the streets, and the people.

It occurred to me momentarily that I had better go slow on that annexation business. It looks as if the boot was on the other leg. So I never said a word, but about the third day Chambers said to me, "How about annexation?" I replied, " rodents" (from Europe).

Toronto is one of the most beautiful cities on this continent; the people are the most hospitable in the world; the accommodations for visitors are not surpassed by any city in America; the cost of living is fully 20 per cent less than in any place I have yet visited.

Toronto was and is a revelation to me, and I desire every florist on everybody connected with our business to visit Toronto at the convention. All those who do so will afterwards thank me for the few words I have said about it.

TORONTO AND HER ATTRACTIONS.

High Park, Island Park, Reservoir Park, Toronto Bay, Exhibition Park. High Park is yet unfinished, but there are some of the finest trees and natural scenery it has been my lot to look on—about 400 acres. Island Park is an island out in the bay, of some sixty acres, stolen from the waters by John Chambers. A superb breathing place. John ought to have a monument on the landing, a good, substantial bronze one. The children of Toronto will subscribe 5 cents apiece a month for a year for the base, I am sure. "This said the florists are to see the barley field on the island, Reservoir Park, where Mr. Reeves holds forth, is a lovely spot, having a commanding view of the whole city, a good place for a large gun or two in case of invasion, and there are guns up there, too, as I know. Exhibition Park. Now this is the deplorable where all agriculturists, all implement manufacturers, and all florists and all mechanics should go to see suitable buildings for exhibition purposes, it matters not what. There are streets after streets of horse and cow stables, of sheep and pig pens, of dog houses and poultry houses, and halls and halls and halls. Then there are more sparrows to the square foot than in any other place on this side of the Atlantic. Everybody should see those sparrows. This is where Vice President Chambers lives, and there is also there a very fine collection of plants; the bedding is well done. There also are some thoroughbred chickens;

thoroughbreds of all kinds left over at various times from the great September fairs they have every year. Go and see the chickens. May be, too, Mrs. Chambers will ask you to take a lunch, just to taste the best salad in the world. John makes this, and Sawyer never knew how to make a salad like it.

Then there is the Horticultural Gardens, presided over either by Mr. Dunbar, Dundas, or Duncan—perhaps none of these are right. Anyhow, everybody will soon know him, because he is a jolly, laughing, good-natured fellow, and will make all happy. In the gardens is the pavilion, where the convention is to be held, and it is the very best meeting place we have ever had; no rattle of drays, no screeching of engines or jingle of street car bells. An elegant building, surrounded with the greenest of lawns, smoothest of walks, finest of trees, and splendid bedding.

Rose growers will go to see John Dunlop's new golden yellow, "Toronto." It is superb, and is 21 karat gold.

You can get in Toronto genuine old-fashioned pop in genuine old-fashioned stone bottles; the bottles are as thick as they used to be. The corks are old-fashioned, tied in with a string, and the price is two pence. Also several white labels beat Bass. Lobsters at Jewell's beat anything in the way of shell fish. George Vair one morning invited me to take a drive through the city, so that I could get the lay of the land for the benefit of the convention. In going through the parade, says he: "This is the city of chestnuts." I says: "Do you mean Esculus Hippocastanum, or Castanea Vesca, Americana or Japonica?" His reply was: "They will all be ripe by the 20th of August." But really, without joking, Toronto is a great city for horse chestnuts.

As to entertainments at Toronto, Mr. Ewing said you can depend upon good music; Mr. Chambers said there will be chorusing; Mr. Saunders promises good walking. The entertainment committee will insure no starvation. Altogether it looks as if Toronto will out Boston Boston.

JOHN THORPE.

Chicago.

W. W. Wells, who sold his North Clark street store to S. Peiser last March, has since been sojourning in Michigan, but announces his intention of starting in again in Chicago the coming fall.

Geo. A. Solly, of Springfield, Mass., is in the city, looking over the field, with the view of locating here and working up a business as landscape gardener.

Paul Zoellner, superintendent of the Oak Grove Greenhouse and Cemetery, La Crosse, Wis., paid the city a visit last week.

Mr. Alex. Murdoch, of Pittsburg, accompanied by his wife and niece, passed through Chicago last week on his way to Colorado, where he will spend the summer. His headquarters will be at Greeley but he will visit other points in the state.

The Horticultural Society of Chicago held its regular quarterly meeting at the Sherman House last Saturday afternoon. In addition to the paper by Mr. J. A. Pettigrew, superintendent of Lincoln Park, and which appears elsewhere in this issue, Mr. Edgar Sanders read a very interesting paper entitled, "A Horticultural Dream," in which he traced an outline of the history and future possibilities of horticulture. He urged that some action be taken to compel owners of vacant lots around the city to keep them

at least free from weeds or the weeds cut down, so that they were not harbors from which new colonies of weeds were annually sent forth. The committee on by-laws submitted a proposed set, and the same were ordered printed and a copy sent to each member of the society, so that all might consider them at leisure, and be prepared to suggest at next meeting any changes that were deemed advisable. President Schneider found it impossible to be present, owing to pressure of work in connection with his duties as World's Fair director, and as such would continue for some time he tendered his resignation as president of the society, that the place might be filled by one who could give it the time and attention it deserved. A successor will be elected at the next meeting. First Vice-President Chadwick presided at the meeting. This was the first meeting at which essays have been read, the previous meetings having been taken up with the details of organization, and the members now feel that the society is fairly started on its work. Some interesting essays are promised for next meeting. The executive committee have not yet selected a hall for the fall exhibition, but expect to be able to announce a selection at an early date. Prospects for a good display at the exhibition are very excellent. Several members of the society have large lots of plants under careful culture for the express purpose of exhibition.

At Niles Center, Pochlmann Bros. are tearing down the houses on their old place, and are building five or six new houses at the new place started last year. F. Stielow is rebuilding six old houses, Schiller & Mailander are rebuilding four old houses, and Adam Harrer one. George Harter is building one new house 140x12, and Mr. Harms is building an entirely new place on Western avenue, two blocks south of Sulzer road, in Lake View.

John Weston says that sweet peas can't be grown satisfactorily in a sandy soil.

Some of the storekeepers claim that many of the growers don't cut their sweet peas to best advantage; that they cut the stems too short, and many of the flowers are not sufficiently developed.

Some of those who consign cut flowers to the commission men get them in too late in the morning. From the way business runs nowadays anything received after 9 o'clock stands much less chance of a sale than that received earlier. Trade is practically over by 10 o'clock now. All consignments should be in by 8:30 at latest to be handled to best advantage.

Toronto.

The regular meeting of the Toronto Gardeners' and Florists' Club held last night (8th) was the most enthusiastic that has yet been held and the attendance was good—about fifty-three as the club statistician informs me; in fact Bro. Long, of Buffalo, who was present, was under the impression that we were having a little convention of our own as a sort of rehearsal.

Mr. W. J. Stewart of Boston, whose presence was also expected, did not materialize until the next morning, he having unfortunately missed connection at Montreal.

A good deal of business in connection with the convention was done and various matter settled which will appear I suppose in the programme issued by the society.

An important item! A bowling alley

has been found in the city. The German Liederkantz Society have one in their building not far from headquarters which will probably be available for the occasion.

Mr. Long took the opportunity of giving his views as to a meeting of delegates from all the Gardeners' and Florists' Clubs in the States and Canada and it was the general opinion of the meeting that much good to the clubs and to individual gardeners and florists might be the outcome of such a meeting. A resolution to the effect that the secretary be instructed to write to the AMERICAN FLORIST announcing that such a meeting would be held was unanimously passed. Circulars will probably be forwarded by this club to the secretary of all the clubs whose addresses can be obtained, asking them to bring the matter before their respective clubs. I may ask that if any club should not receive a circular through lack of address, that they elect their delegates all the same. It was thought that this meeting need not be confined altogether to delegates, but should be open to all, the idea of having delegates being in order to allow any club to give power to act as directed in any particular matter they might wish to bring up at the meeting.

Mr. F. G. Foster read a very excellent and practical essay on sub-tropical bedding plants, which the club resolved to have published in the local dailies.

This morning most of the chairmen of the local committees met Mr. Stewart at the Queen's Hotel and had a general talk over matters. Mr. Stewart has now got all the information necessary to issue the preliminary programme, which I presume he will do at an early date.

The meeting afterwards adjourned to the Horticultural Pavilion where the convention will be held. Mr. Stewart, who when here in January only saw the Pavilion after dark, was very much pleased with the place, its acoustic properties being good, and being situated in a quiet locality members can have no complaint to make as to not being able to hear all that is said. The trade exhibit will be under the same roof, but will of course be closed during the sessions of the society.

It has been arranged that all trade exhibits should be addressed to the exhibitor in care of W. E. Wellington, Horticultural Gardens, Toronto, who will give a bond to the Customs Department that they will be returned to the United States after the convention, or it sold that the duty will be paid. It is specially requested that exhibits be shipped in good time in order to avoid disappointment. Communications as to trade exhibits should be addressed to Mr. Thos. Manton, florist, Eglinton, Ont. T. E.

Boston.

Mr. J. F. Hanson, an old and highly respected florist of Winchester, died on July 11.

At the July meeting of the Massachusetts Horticultural Society, Mr. Jackson Dawson, on behalf of the Gardeners' and Florists' Club of Boston offered the following premiums: For the annual exhibition, two prizes of \$100, and \$50 for mantel decorations and for the chrysanthemum show, two prizes of \$75 and \$50 for ten vases of ten varieties, ten blooms each, long stemmed.

At the Iris exhibition on July 11, the first prize was awarded to John L. Gardner for Iris Kempleri. H. H. Hunnewell and E. Sheppard & Son also exhibited very fine blooms of this showy flower.

but not in competition. The displays of hardy herbaceous plants from J. W. Manning, Wm. Martin, and Temple & Beard were exceedingly fine, as also were the native plants from Mrs. P. D. Richards, E. H. Hitchings and J. E. Coburn. Jackson Dawson showed an interesting group of fruiting shrubs, including a number of varieties of Ionia, ribes, prunus, etc., and prettiest of all, Eleanus longipes, Delphiniums, Japan lilies and candidams, hardy carnations, etc., together with a nice collection of fruit and vegetables, made up a very creditable exhibition, which was well attended.

A few days ago a party of seven, including such dignitaries as the presidents of the S. A. F. and of the G. and F. club, and several to visit the picnic grove at Weymouth Landing, with a view to perfecting arrangements for the coming excursion of the G. and F. club. The offer of a sail on Mr. N. F. McCarthy's boat was accepted as preferable to a trip by train, and as there was a roaring breeze they embarked in great glee, Mr. McCarthy being skipper and President Foster captain. Before reaching their destination, however, the honorable president of the G. and F. club took an involuntary ducking in the bay, owing to a slight misunderstanding which he had with the boom, whereat the worthy president of the S. A. F. has been continually laughing ever since, and it is doubtful whether he gets his face straightened out entirely in time for the Toronto convention.

Judging from the accounts of eye witnesses there was only one thing lacking to make the incident perfect, and that was a photographic camera. Scarcely a day is passing in an album would have been a picture of the party on the homeward trip, when the boat got firmly stuck in the mud. After long and fruitless efforts to start her they accepted the offer of a friendly passing sail which took them aboard and brought them safely home.

W. J. S.

Philadelphia.

This is the season for repairs; old benches have to be made new, bare spots touched up with paint and everything put in good working order for the fall campaign.

Pennock Bros. have been busy putting in new hardwood benches and making other repairs. Their's is one of the most complete retail stores in the country.

Mr. David Bearn with the help of some of his friends in the trade, who had been invited to the "moving," has about everything removed to his new place near Bala. Four houses, each one hundred by twenty, and under way. He will confine himself to cut flowers for the wholesale market. His brother has come from Scotland to learn the business and will no doubt be of great assistance to him.

The last meeting of the Florists' Club was very well attended, Mr. John May was present. A resolution was passed unanimously and a paper drawn up and signed by all present endorsing Mr. John Thorpe in the position of Chief of the Horticultural department of the World's Fair at Chicago.

The paper read by Mr. Geo. Watson on summer flowering annuals suitable for cut flowers showed that great care had been taken to make it full and complete. Many flowers were spoken of which should be given a trial, especially the "Bluet," which was said to be fast becoming a popular flower.

The question for discussion at the next meeting is, "how shall we go to Toronto?"

The chrysanthemum will be able to hold its own this fall at any rate. Large

quantities have been planted by all the leading growers and we confidently expect to see fine flowers in fair quantity by the first of October.

Mr. Alexander Scott, of R. Scott & Son, sailed for Europe a few days ago. He is in search of novelties. Novelties no doubt are the bread winners of the business, despite the fact that in the majority of cases when the novelty wears off there is very little left.

The base ball season has opened. July 4 the Craigs, of Mr. R. Craig's establishment, proceeded to Mr. Dreer's place at Riverton. Confidence they had in abundance, but the Dreer boys got the game. A royal good time however was enjoyed by everybody, Mr. Dreer having looked out for the inner man, and justice was done to his heroic feast. The return game is to be played at Mr. Craig's July 18. S.

Washington and Baltimore.

None of the 1,600 excursionists who went to Bay Ridge yesterday on the Columbia enjoyed the day more than the fifty Baltimore florists and their families who boarded the early morning boat. At the invitation of the Washington florists to meet them at Bay Ridge for an annual reunion the members of the Gardeners' Club of Baltimore extended the hand of good-fellowship to their brethren from the District. Including the wives and families, who formed an important part in the day's jollification, the whole party numbered about two hundred and fifty. The clever little device of the Washington Club of presenting a bouquet of flowers to every purchaser of a railroad ticket brought many down to the Ridge who were not members of the Florists' Club, and in consequence the pretty groves and parks, the pavilions and piazzas held a merry crowd all during the day.

The florists wore ribbon badges in red, white and blue, with silver lettering designating the cities they represented. The train from Washington and the boat from Baltimore arrived at their destination about the same time and as soon as greetings were exchanged between the clubs the flower growers of the neighboring cities, putting aside all thought of their business, set about immediately to devise some means for having fun. The fun in each case ended disastrously for the Baltimoreans, as it happened, every game being carried off triumphantly by the Washingtonians.

In the rifle-shooting ten men on each side were ranged against each other. The Baltimore florists had come prepared for emergency in the way of defeat, and when the District ten won they received a handsome banner of stars and stripes, suitably inscribed, as a trophy, to be hung up in their club rooms. "Bring a gorgeous silk banner with you next summer," advised the Baltimore president to the Washingtonian, "because we intend to go in and win."

An exciting base ball game was played, interrupted, however, by the rain, but leaving the score 17 to 14 in favor of the Washington florists. The light rain, beginning just as the afternoon excursionists were leaving the boat, was not prolonged enough to give any one a serious wetting or spoil the day's pleasure, but served only to freshen the grounds up a bit and cool the air delightfully.

Afterward the florists again essayed to match their powers, this time in a "tug of war," ending in a glorious, or as the Maryland men would have it, an inglorious victory for their opponents. It came

about this way: Six men each side pulled vigorously against each other by a stout rope. The Baltimoreans were heavy weights and the Washingtonians were light weights. A bystander, hailing from Baltimore, thought to lend an extra helping hand to his friends. Whereat, the on-looking Washingtonians locked to their club's side and pulled the Baltimore floriculturists all over the place. But it was fun for every one, notwithstanding the defeat, and that was the main object after all. The Washington Club invited the Baltimore Club to dinner and in return the Baltimore Club entertained the Washington Club at supper. At half past 7 the clubs separated and went their ways by boat and rail.

Among the Washington florists present were President MacEvers, Wm. R. Smith, superintendent of the Botanical Gardens; Messrs. Hale, Fields, Gude, Cadmus, Clark, Bologian, Erdmann, James Clark, William Clark, Philip Gorgas, John Cook and others. Among the Baltimore florists were the officers of the Gardeners' Club: Wm. Fraser, president; E. A. Seidwitz, vice-president; William B. Sands, treasurer; John Wiele, secretary; Henry Bauer, corresponding secretary; C. M. Wagner, librarian; and Wm. P. Creighton, Fred. Burger, Edward Kress, H. Walter, Conrad Hess, Charles Hamilton, John Donn, Henry Fisher, Henry Frederick, Jules Tishinger, Thomas Patterson, Charles Wagner, Isaac Moss, Robert Hallday, Robert Hallday, Jr., Philip Welsh, Thos. Vincent, Wm. McRoberts, Jr., L. M. Huggins, Louis Eckhardt, John Fleming, Louis Franklin, John Wagner, Parker Burbank, Jefferson Pentland, Henry Everhardt, Ed. Hermann, Messrs. Perry, Lehr, Hanske, Ebaugh and Smith.—*Baltimore Sun*, July 8.

News Notes.

HARTFORD, CONN.—Mr. John Coombs, the florist, has been in New York for the past week on business.

ST. LOUIS.—At the coming chrysanthemum show of the St. Louis Florists' Club prizes to the amount of \$1,500 will be awarded.

QUEBEC, CANADA.—The Quebec Horticultural Society will give an exhibition of flowers, fruits and vegetables the first week in September.

PROVIDENCE, R. I.—November 4 to 6 are the dates decided upon for the coming chrysanthemum show of the Rhode Island Horticultural Society.

NEW PETERSBURG, O.—W. R. L. Dwyer has started into business here with one house 21x60. He will erect several large houses the coming spring.

DES MOINES, IOWA.—Mr. R. A. Rollinson has purchased the interest of his partner, Mr. E. W. Bergstrom, in the firm of R. A. Rollinson & Co., and will continue the business.

DENVER, COLO.—The Colorado Nursery Company was incorporated June 30. The incorporators are Frank W. Hubby, Chas. L. Burpee, John L. Russell and Frank A. Bailey. Capital stock \$50,000.

THE Hartford County Horticultural Society has issued a premium list for the 1892 bulb exhibition. Copies may be had on application to the secretary, Edwin A. Taylor, box 1015, Hartford, Conn.

COUNCIL BLUFFS, IA.—The project of a great floral and fruit exposition is being

agitated here. Mr. L. A. Casper, the florist, has offered to donate \$5,000 for the purpose if the citizens will contribute the remaining sums necessary to its success.

LAMPASAS, TEXAS.—The fifth annual meeting and exhibition of the Texas State Horticultural Society was held here July 1 to 3. There was a large meeting and an excellent display of fruits, flowers and vegetables.

BATAVIA, N. Y.—Gus Noack, formerly of Rochester, has started in business for himself at this point and is building four greenhouses on Bank St. Three of the houses are 18x60 each and one 10x60. His name should be added to the directory as F.

LANCASTER, PA.—The evening of July 3 there was a heavy fall of hail in this section, and many of the florists around the city had all or nearly all of their glass broken. As usual the Florists' Hall Association proved a mascot, as there was no losses whatever among those that were insured. As a memento of the glorious fourth Bro. Schroyer has a huge hole in the plate glass window of the city store.

LOS ANGELES, CAL.—At the meeting of the Southern California Horticultural Society, June 29, there was read a paper on pansies by Wm. Barclay. Among the cultural recommendations of the essayist was one that the soil should be treated with salt to kill worms and prevent mildew. The salt should be applied at the rate of one-fourth pound to the square yard. Charcoal was also recommended, to keep the soil from becoming sour.

SAN FRANCISCO.—An extra meeting of the Florists' Club was held the evening of June 27. The subjects considered were the sale of plants and flowers from Golden Gate Park and street peddling. Various plans were considered for driving street peddlers in flowers out of the field, but no final decision was reached. The Cain Fruit and Nursery Co. was incorporated June 30. The incorporators are T. P. Cain, A. P. Jacobs, J. B. Agnew, and C. H. Patchett of this city and Geo. F. Heales of Versalia. The capital stock is \$72,000.

ROCHESTER, N. Y.—The eight acres of hardy roses in the nursery of Ellwanger & Barry now make a magnificent display of bloom. This is probably the largest plantation of roses in America, and when the plants are in bloom it is a sight to be long remembered. Among the roses now, or recently in bloom are Caroline D'Arden, Earl of Dufferin, Lady Arthur Hill, Lady Helen Stewart, Duke of Albany, Gloire Lyonnaise, Heinrich Schultheis, Marchioness of Lorne, Mrs. John Laing, Earl of Pembroke, Alphonse Soupe, Duchess of Albany, Grand Mogul, Miss Jennie Dickson and Queen of Autumn.

Sports.

Philadelphia.

The long prepared for contest between the ball teams of the Henry A. Dreer and Robert Craig nurseries was played at Dreer's nursery on July 4, and resulted in a complete victory of the Dreer boys by a score of 11 to 2.

Considerable interest has been taken in this game, and the victorious team expressed their delight at their success by engaging the village band to escort their defeated friends from the field of battle to the woods near by, where luncheon was served and general good feeling prevailed.

A return game is to be played at Craig's nursery on July 18, when it is prophesied the Jersey men will have no show at all. Features of the game were Faust's pitching for the Dreer men, he striking out fifteen men; the magnificent catch of a hot liner by Faunce, and the fine work at second base by Farrington, of the Craig team.

Following is the score:

DREER TEAM—	R.	B.	P.	O.	A.	E.
Faunce, 1b.....	2	2	3	2	0	
Faust, p.....	2	1	3	5	0	
Cole, 3b.....	3	2	1	2	2	
Roden, c.....	0	0	16	3	1	
Finnegan, ss.....	2	2	2	3	2

Craig team.....0 2 0 0 0 0 0 0—2

JERSEYMAN.

Chicago.

A nine composed of retail florists faced another nine composed of wholesalers on the diamond last week. As can be imagined from the character of the opposing forces, the game was a hotly contested one.

The game was played at Summerdale, in a meadow just south of the establishments of the Reinberg Bros. who were the hosts of the occasion, and with the vim and dash for which florists are noted. About 40 of the boys turned up, besides a host of friends and admirers.

John Zeck, of Reinberg Bros., served up the curves and twists for the wholesale men in first class style, only six hits being made from his delivery. He also distinguished himself by some pretty tall kicking, but in this last, he was fairly out-donked by Mr. Scott, with Kennicott Bros. Talk about the mighty Kelly! Why! Scotty could give the prince of kickers ten points and then win easily! But Scotty caught a pretty good game and was a power with the stick, his home-run drive into a far-off potato field in the 6th was a corker.

Mr. Downs of Rose Hill officiated for the retail men in the first inning and was afterward relieved by Mr. Kirsht of Niles Center. Both pitched a good game. Jim Curran, behind the bat, played a superb game, only three errors being charged against him; he also hit the ball freely. Walter Kreitling played first base for the retailers, and distinguished himself by amassing a long string of the rankest of rank errors, and also by making more noise than all the rest of the players put together. But Walter made a couple of brilliant catches that would do honor to a professional. Joe Curran's right field rather disappointed his admirers in the first few innings, but in the sixth he stepped up to the plate a la Anson, with blood in his eye, taking a vicious swipe at the first

ball that sailed over the plate. The bat cleft in twain, was seen sailing for third, the ball took a cruise over second, and Joe scudded for first, which he reached safely. A minute later he stole second and third and came home on a passed ball. Phil Hauswirth, on second (retail), played his position in fine style; the features of his game were his great slides; the unfortunate part of these slides was that they were executed about midway between the bases, so they didn't count for any more than about three square inches of cuticle from his elbows, left on the slides. Frank Church's playing at third (wholesale) was most brilliant, his catch in the sixth brought down the house. It happened in this way: Frank had been hustling pretty lively in the first five innings and began to get tired, so when play was called he covered third and promptly went to sleep. A minute later he awoke with a start, and to his intense surprise he found the ball firmly clasped in his outstretched palms. This brilliant catch received a well merited round of applause. But there was Joe Whitehead in left field. He was supposed to catch any stray flies that might come his way, but the flies persisted in refusing to be caught. Walter Kreitling made the unkind remark that Joe could not catch anything, not even the small-pox. Now this was a gross libel on the left fielder, and clearly proven such in the very next inning. To be sure, Joe was at the bat, and his only business was to hit the ball. He is a good hitter, Joe is, but just then he would not have hit a balloon if it had come flying over his head, so he concluded to catch the ball. He did catch the very next ball—in the small of his back—and five minutes later, after some vigorous rubbing, he also caught his breath. This was glory enough for him. William Hanft did himself proud in the capacity of umpire on balls and strikes; his decisions were impartial to both sides. To be sure, Billy called it "ball" two or three times after the striker had made a terrific swipe at the ball, but small matters like that did not worry Billy any. Denny Gallagher was the umpire on balls. He had rather a hard time of it trying to convince the kickers that they were wrong and he was right. To be sure Denny's decisions were at times decidedly off color, but what umpire ever satisfied both sides? E. J. Harms and John Bruckner made some brilliant hits. A full game of nine innings was played with the final result of 13 to 14 in favor of the wholesale men. Following is the position of the two nines:

RETAIL.	WHOLESALE.
R. Downs, p.	John Zeck, p.
W. Kirsh, p.	— Scott, c.
Jim Curran, c.	J. Kelley, 1b.
Walter Kreitling, 1b.	C. H. Fisk, 2b.
F. J. Hauswirth, 2b.	Frank Church, 3b.
F. Kreitling, 3b.	Chas. McKellar, ss.
A. Bock, ss.	E. J. Harms, rf.
Joe Whitehead, lf.	John Bruckner, cf.
Joe Curran, rf.	Larry Keller, lf.

Centauria Ruthenica.

Regarding this centauria a correspondent of the London *Garden* says:

"I wish at present to speak more particularly of the merits of this uncommon species as an effective foliage plant, though by no means deficient as a floral subject. Young plants three years old from seed closely resemble young palms, *c. p.* Cocos Weddelliana."

This is hardly in many parts of Great Britain. Hasit been tried in this climate?

Floral Difficulties.

The thoroughly practical little communication from A. N. C. in the *AMERICAN FLORIST* of July 2 opens my eyes to the fact that there are a great many difficulties that florists have to contend with which artists do not thoroughly take into consideration. So, we artists wonder somewhat at the conventionality of emblematic designs coming from the florists, never thinking of the arbitrary habits of the flowers themselves. I remember, now I am reminded of the fact, that buttercups and wild violets have an aggravating way of wilting as soon as picked; and also that the "water nymph" insists upon folding her bosom and shutting her eyes except during the morning hours. However, common field daisies and wild yellow lilies behave themselves better, and I have found that they will last several days. I had in mind an afternoon wedding when I suggested the use of pond lilies on such an occasion, but I remember now my struggle to keep the "water nymph" awake at two o'clock, on the occasion of an afternoon party, some few years ago. But notwithstanding this difficulty the effect produced was very beautiful and was greatly admired.

I am asked about the thickness of a hempen rope for the lover's knot. This is a matter which should be left to the discretion of the designer. Even though the rope be two inches in diameter, it is quite possible to entwine it with flowers in a way which shall completely hide any clumsiness. In fact, the gilded or silvered rope need only show itself enough to suggest the knot. But the idea of tying a couple together with a two-inch cable suggests something almost appalling. There doesn't seem to be much hope of liberty in such an affair! I can imagine, then, that a very pretty and dainty rope, half-inch in diameter, knotted at intervals and woven with white carnations, the rope being silvered. I call to mind some very beautiful marine pictures framed in rough sawed pine wood, and bound with hempen rope, the whole affair rendered in an effect of copper and gold bronze. These are the little touches of true and natural art which we ought to struggle for nowadays; it does mean a struggle, I admit, and we are liable to run against 'snags,' but then we ought to 'touch the unknown seas' and wrestle with the unknown difficulties, else we can never take the lead.

Mr. H. H. Battles mentions something of the auto-chromatic method of photographing colors, which is almost in common use today, particularly in France. I think this method is known by the term, Azanine plate. It simply means that the solar rays are brought to terms and do not act differently upon different colors. There is not the trouble in the use of this method that Mr. Battles supposes; it is a trifle expensive, presumably on account of the patents, yet it is in common use and is absolutely necessary in the photographic reproduction of colored pictures. As applied to the photography of natural flowers the result is marvelously truthful and surprisingly beautiful. A few more years and we will, it is hoped, see the Azanine plate in common use everywhere.

F. SCHUYLER MATHEWS.

To Gardeners' and Florists' Clubs.

There will be a meeting of delegates from Gardeners' and Florists' Clubs during the convention at Toronto, and all clubs are requested to elect delegates to attend this meeting and to instruct them

regarding any matters they wish to have brought before the meeting for action.

A circular invitation will be shortly sent to the secretaries of the various clubs by the Toronto club, but the invitation is general and any not receiving the circular are also invited to send delegates. It is believed that this meeting will be a most interesting and instructive one.

Don't fail to bring the matter up before the next meeting of your club.

The World's Fair.

The latest news regarding the Horticultural Department of the World's Fair is the withdrawal of Wm. Forsyth, the last appointee as chief. No further appointment had been made up to 4 p. m., July 14.

Mr. John Thorpe, who is now in Chicago, is regarded as almost certain to have charge of the division of floriculture. The fact has generally been accepted all along that Mr. Thorpe was the man for this division of the department.

Express Rates.

ED. AM. FLORIST.—Your article about exorbitant express rates hits the nail on the head. If anything curtails the profit of the commercial florist it is the unreasonably high rates charged florists on plants and flowers and as you truly remark they prevent hundreds of people and florists from buying at all; they prefer to do without the plants rather than submit to such robbery. We have hundreds of letters on file to show that people not only are charged double rates but even more. The Southern express companies are the worst to deal with and they greatly obstruct business in the south.

We have already begun to ship largely by freight and if the express companies fail to make concessions it will be well for all florists to ship all heavy orders of hardy plants by freight whenever practicable. We even find that plants arrive generally in better condition by freight than by express.

While the Society of American Florists considers the express rate matter would it not be well to agitate the question of asking congress to allow double the weight of goods to be shipped through the mails as at present allowed?

Louisville, Ky. NAX & NEUNER.

Names and Addresses of Chairmen of Committees of Toronto Gardeners' and Florists' Club for S. A. F. Convention, August, 1891.

Reception Committee—Mr. John Chambers, Superintendent Parks and Gardens, St. Lawrence's Hall, Toronto, Ont.

Trade Exhibit Committee—Mr. Thomas Manton, florist, Eglinton, Ont.

Entertainment Committee—Mr. W. J. Laing, 401 Huron street, Toronto, Ont.

Ladies' Committee—Mrs. Fraser, florist, Spadina Crescent, Toronto, Ont.

Introduction Committee—Mr. F. G. Foster, florist, Hamilton, Ont.

Decoration Committee—Mr. C. Arnold, florist, 521 Queen street, W. Toronto, Ont.

Finance Committee—Mr. J. H. Dunlop, florist, corner of Bloor street and McKenzie avenue, Toronto, Ont.

Printing and Badge Committee—Mr. S. E. Briggs, of the Steele Brothers Co., corner of Front and Jarvis streets, Toronto, Ont.

Bureau of Information—Mr. George Vair, care Sir D. S. McPherson's Chestnut Park, Toronto, Ont.

 insertion in the issue for the following Thursday.

Address THE AMERICAN FLORIST CO., Chicago.

HORTICULTURE AN ART.

A prominent member of the Chicago
 board of directors has said: "You horticulturists
 are artists or scientists, not business men except in a few instances,
 and can hardly claim a position requiring
 the executive and business capacity
 demanded by this department."

Admitting the truth of this, which we
 do not, is not professional skill rather
 than business capacity the greater essential
 and more worthy the honor of the
 position? We occupy a grand field. Here
 art and science are so mingled that no art
 and no science passes it in possibilities.
 He to whom nature and education has
 given both in a broad sense may be fitly
 called a genius. Such a man in many
 ways is John Thorpe and all who have
 known him will admit it. Is the execution
 of business detail paramount to such
 knowledge? Is not this a department of
 which the head should possess that science
 and art and his assistants attend to the
 business detail? We think so and it
 is in this view that we can support the
 claims of Mr. Thorpe for the floral divi-
 sion or even for the head of the depart-
 ment.

Coming Exhibitions.

☞ Re Seed Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTHELEMS, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggitt, chairman membership committee, Wethersfield, Conn.

HENRY A. SALZER, manager of the John A. Salzer Seed Co., La Crosse, Wis., left for Denver, Col., and California points July 9.

J. LELAND FOGG, formerly of Chicago, purchased the seed business of H. G. Higley at Cedar Rapids, Iowa, last spring, and is now located at that point.

JOHN LEWIS CHILDS' libel suit against the *Rural New Yorker* for \$75,000 is now in full swing in the New York courts. The charges and answers are very voluminous and as Mr. C. is said to be thoroughly in earnest, a precedent will doubtless be established in the upper courts as to what a man may say in a catalogue and to what extent an editor may reflect on the motives of the catalogue man.

A Title for a Turnip.

SEEDSMAN of rare enterprise

And advertising fame

Has got a mammoth turnip now

For which he wants a name.

And for the name adjudged the best

He'll pay a golden pile,

To make his turnip through the land

All gardeners beguile.

He realizes, probably,

That his bright pamphlet page

Should glorify his turnip as

The turnip of the age.

He wants a name to win the man

who hoes and rakes and digs,

So what's the blooming matter with

The Reverend Doctor Briges?

The Colonel Shepard has a ring,

So has the D. B. Hill,

The Tolstoi patronage would win,

So would the Buffalo Bill.

If just for fun he'd christen it

To win the western ear,

How sounds the Duke of Simpleton,

The Narragansett Peer?

The Kipling or the Phillips Brooks

Might make the turnip sell,

And as the Great Fair's booming, the

Columbus might sound well.

The Turgeneff, the Ibsen, and

The Jerry Simpson, too—

Oh, any of these titles known

From Dan to Kalamazoo.

Would send the turnip banging down

The garden path of fame,

Should it but have the merit to

Prove worthy of its name.

—R. K. M. in *Puck*.

Cactus Plants Not Dutiable.

(G. A. 669)

Before the U. S. General Appraisers at New York, June 11, 1891.

In the matter of the protests, 7097 8 9, of Anna E. Nickels, against the decision of the collector of customs at Corpus Christi, Texas, as to the rate and amount of duties chargeable on certain cactus plants imported at Laredo, April 18, 1891, and May 4, 1891, entries 457 and 522.

Opinion by SHARRETT'S, General Appraiser.

The goods in question consist of specimens of several varieties of Mexican

cactus plants, upon which duty was assessed at 20 per cent. ad valorem, under paragraph 282, act of October 1, 1890.

The deputy collector at Laredo states that the importer "is engaged in the business of collecting such plants for the northern market, and is bringing in quite a large quantity of them to stock her garden in this city."

The plants need no protection in this latitude, but if taken to a northern climate I presume they would."

The appellant claims that the plants "should have been admitted free under paragraph 666 of the free list as decorative plants. These plants are grown under glass in northern and eastern cities exclusively for decorative purposes."

As held by us in G. A. 290, it is not the specific use to which particular plants are to be put by the person or persons importing them, but the *chief* use to which such plants are applied that controls their classification, and although the cactus plants in question may be grown in the open air in some section of the country, we find that their chief use is for growing under glass for decorative purposes.

The protest is sustained.

JUST BEAR in mind that the AMERICAN FLORIST goes to everyone in the trade and when you advertise in its columns you reach every florist in America.

THE TIME for the annual convention of the Society of American Florists is approaching. Will you attend? Better begin now to shape your affairs so that you can safely leave your business for a week or so in August. The man who has regretted the time and expense of attending these conventions has yet to be found.

PLEASE NOTE that various changes and additions to our forthcoming exhibitions are made in nearly every issue. The information you wanted last week may be given this week.

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

OUR NEW TRADE LIST NOW READY.

DUTCH AND OTHER BULBS.

E. H. KRELAGE & SON, HAARLEM, HOLLAND,
have published their new Wholesale Trade List of all sorts of bulbs and tuberous rooted plants, American edition (No. 505), which is sent to the trade only on prepaid application.

Price of Admission to Exhibitions.

ED. AM. FLORIST. I am heartily in favor of a low admission price to our exhibitions, and if there is to be any difference in the price of admission during the day from that in the evening, let the lower price be for evening admission, by all means.

Wealthy people can find time and money to visit all the large conservatories, large commercial places, and private collections of plants, though they be at a good distance; nay, they do better than that, by having such collections of their own. But how is it with the mass of the people whose lives in many cases need just this breath of sweetness and enjoyment that such an exhibition affords? Can they leave their work during the day to get such a whiff of new life? The truth is, it is impossible for the great majority to go to such a place at any other time than in the evening, and these are the very ones that need to go the most.

Let the admission be low, especially in the evening, and these are, you suggest, S. T. A.

Answers to Queries.

C. C. L., California, asks: 1. How to propagate Cape Jasmine (Gardenia)? 2. What is the best book on raising seeds for market?

1. From cuttings of the half-ripe wood, but if your conveniences are good you may strike the cuttings with success at any time of the year. The cuttings should be put in in frames where they can be kept moist, away from wind and shaded overhead, not only by a sash or screen immediately over the frame, but too by a lath, brush or other shade-screen, say five feet above the frame, just as northern nurserymen raise thousands upon thousands of plants from cuttings in summer. 2. We know of no such book. W. F.

An Editorial Notice.

The following from the Salem, Oregon, *Statesman*, shows that the horse editor is equal to any occasion:

"A TROPICAL PLANT.—Mrs. William England brought to this office yesterday a tropical plant from the garden of Mrs. W. J. Folley. It is certainly a thing of beauty, evidently belonging to the calla family. The botanical editor being out, the horse editor said he thought it was a huge pepper pod, with a pistil in the center, and trimmed with daffyns and thingumbobs all around. The horse editor admired the plant very much."

Postage on Cut Flowers.

In answer to the inquiry as to postage on cut flowers in your last issue, would say that the Pittsburg postoffice has ruled that one cent for each ounce must be paid. Pittsburg. A. M. & J. B. MURDOCH.

SEND IN your adv. now for the convention supplement which we shall publish with our issue for August 13.

Pansies, Extra.

The Jennings strain of large flowering Pansies, the finest in the market, is now ready. Florists who have used this strain say it is the best they can get. It is finer than last year's Seed, finest mixed, . . . trade pkt 25c., 50c., \$1.00 Large yellow with dark edge . . . 25c., 50c., \$1.00 Yellow, per ounce, \$5.00. Trade, per ounce, \$5.00. Plants in any quantity ready Sept. 1, 5c. per 100 by mail; \$5.00 per 100 by express. ADDRESS E. B. JENNINGS Pansy Grower, Box 76, SOUTHPORT, CONN.

PANSIES.

PANSIES THAT ARE UP. No need to worry over getting the seed to come up, it is up and ready to plant when I send them.

It is not only the plants that are up, the strain is up also; up to, and a goodly number of my customers say, above any strain in the market. The price is down, considering the quality of the strain, seed as good would cost you about as much per 1000 plants. My price is \$5.00 per 1000, or in lots of 2,500 and over, \$4.50 per 1000.

SEND FOR LIST AND SHORT PAPER ON CULTURE.

PLANTS READY AUGUST 20th TO DECEMBER 1st.

SMILAX.

Plants ready July 1st and later. These will be nice and stocky, and ready to go right ahead. There is some 40,000 here; let me have a chance to fill your order.

Send to cents for samples and get my prices before ordering elsewhere.

L. B. 338.

ALBERT M. HERR, LANCASTER, PA.

PANSIES. * *

Plant your frames this fall with PANSIES that will SELL AT SIGHT. You want the BEST if you keep up with the procession. My strain cannot be surpassed for size, color, or substance of flowers. I know my stock will please, and I am prepared for a big rush.

FINE STOCKY PLANTS, once transplanted, \$5 per 1000 by express; 75c. per 100 by mail. Special prices on larger lots. Orders booked now filled in rotation, or on any date desired after August 15.

ALEX. McBRIDE,
ALPLAUS, N. Y.

Keachie's Hotel, 30 King St. W.	50	
Empress, Yonge and Gould.	100	1.00 to 1.50

The majority of the above hotels are in the business portion of the city, the center of which is about one and a half miles from the convention hall in the Horticultural Gardens. Street cars pass the doors of all of them, making communication between hotel and hall quite easy.

Members wishing to secure accommodation before hand will do well to communicate early with Mr. J. H. Dunlop, 1 McKenzie avenue, Toronto, Ont.

OUR CONVENTION SUPPLEMENT will be published with the issue of August 13, and the map and directions it will contain will, we believe, be of considerable value to those attending the meeting at Toronto. Exhibitors wishing to call special attention to their exhibits will find the supplement a very effective medium.

THE Chicago Florist Club is now making arrangements for transportation to Toronto in August, and will as usual invite members in the west and north-west to travel with them from Chicago.

ACCORDING to the census reports the aggregate capital invested in the industries of viticulture, truck farming, floriculture and seed farming is in round figures \$312,000,000.

WILL you be with us at Toronto? You will miss it if you stay away.

Surplus Stock.

I have a stock of plants consisting of GERANIUMS, COLEUS, FUCHSIAS, FARFUGIUMS, HIBISCUS, BEGONIAS, PILEAS, ETC.,

THE CHEAPEST AND BEST OF ALL.

FIR-TREE OIL INSECTIGIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleansing purposes.—Half-a-pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-pint of the Fir-Tree Oil to two or four gallons of water, or two or three table-spoonfuls to the pint.

For Red Spider and Caterpillar—Half-a-pint of the Fir-Tree Oil to two gallons of water, or three table-spoonfuls to the pint.

For Mealy Bug, Brown or White Scale—Half-a-pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoonfuls to the pint.

For Mildew and Blight on Fruit or Foliage—Half-a-pint of the Fir-Tree Oil to a gallon of water, or six table-spoonfuls to the pint.

Used with warm water it is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied in Wood, Tin or Pot Vessels.—Galvanized Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermin mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ring-worm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

Sold in Bottles and Tins.

Manufacturer—E. GRIFFITHS HUGHES,
MANCHESTER, ENGLAND.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness,
smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this we base below a table showing number in Crate and **WEIGHT**
of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/2-inch	3,000	350 lbs.
2 1/2 "	2,400	250 "
3 1/2 "	1,750	175 "
4 1/2 "	1,400	140 "
5 1/2 "	1,200	120 "
6 1/2 "	800	80 "
8 "	600	60 "

It will be seen at a glance, that our pots are one
third lighter than formerly, and yet we claim that
owing to the superior quality of our clay and im-
proved machinery, they are stronger than any pot
in the market, and we frankly ask you to make the
test. **SEND FOR PRICES.**

EAST WALPOLE, MASS.

Single and Double Thick Glass.

In reply to Mr. Murdoch in your issue of the 2nd Inst., the glass 18x24 (not 18x24) which comparatively escaped destruction in the late hail storm here, is single thick. Mr. Gray has no double thick on the place.

My impression at the time was that the glass owing to its size simply bounced the hail off where the smaller sized glass held tight and would not give. The house of large glass is in the center of the block of houses. Years ago I had an experience similar to that we recently had here. A whole range of houses was glazed "double thick" 18x24, everybody else was smashed out and out and windows in dwelling houses and public buildings met with the same fate. After the storm I expected to find a mass of broken glass and ruin generally; guess my astonishment was broken to find that not one pane of glass was broken.

I advocate, and always will do so, "double thick" and 18x24 and no top putty. Glaze 18x12 single thick and you subject yourself to fright and nervous prostration and kindred diseases all inside of five minutes, while on the other hand you would get more light and feel comparatively safe unless a storm of bricks came along, and who in these days can wonder at anything? "Double thick" and large size for me every time Mr. Editor. JAMES FRASER.

Cincinnati.

Crawled into the Boiler.

A laughable story is told of an employee of a grower whose houses were riddled by a fall of heavy hailstones some time since.

This young man saw the storm coming up, and started to lower the ventilators. These were not worked by apparatus and he had to lower them one at a time. He was still pretty wet to the end of the house when the storm burst, and with it came a fall of hail that left only a few whole panes of glass on one side of the house. As the deafening noise of the falling stones on the glass left on his ears he darted like a deer for the potting shed. But before he had made a half dozen jumps the heavier stones came and the crashing of glass was added to the pandemonium, and stones and broken glass fell on him thick and fast. But they hardly had time to touch him, for in a moment he reached the shed, and some time afterward his feet were discovered sticking out of the boiler (it was summer time, of course,) where he was mumbering something—presumably his prayers. He was so overcome by fright that he paid no attention to invitations to come out of his place of refuge, and finally had to be pulled out. And it was finally discovered that he thought the world had come to an end. That the earth had gone to pieces and he wasn't quite sure that he was mistaken even after he had been pulled out, and found his anatomy still intact.

These "dispensations of Providence," as one florist calls them, are certainly sometimes terrifying. The tattoo of the smaller stones on a large surface of glass makes a tremendous noise, and when 5,000 or 10,000 feet of glass is smashed by the heavier ones the crash makes a noise not soon forgotten, and if you happen to be under the falling stones and glass fright is excusable. M.

CONVENTION SUPPLEMENT

Our Annual Convention Supplement
will be published with the

AUGUST 13 ISSUE.

It will contain a sketch map of the city of Toronto, give locations of Toronto Hotels, with rates at each one, directions to reach points of interest, and other notes of value to visiting members.

ADVERTISEMENTS

for the Supplement should be received by **August 7 at latest**, and as much earlier as possible. **Rates** same as in the body of the paper: 10 cents per agate line; page \$42.00; half page \$21.00; column \$14.00; half column \$7.00; inch \$1.40.

Being mailed with the August 13 issue it will reach members before they start for the Convention, and will be their friend, philosopher and guide on the way to and during the meeting. Extra copies will be distributed at the Convention.

SEND IN YOUR ADVERTISEMENTS EARLY.

A Symphony in Pink.

Pink is a color which at once suggests to our minds an infinite number of tints and tones and a number of descriptive names apparently invented for the special purpose of bewildering us still further in our effort to sort them out. Perhaps the simplest method by which we may arrive at some satisfactory conclusion in the description of different pinks is one which starts at the outset with the artists' color box as a basis of operations. Here we have positive colors with positive names and the least possible variation with the colors of a given name. For instance, scarlet vermilion is always the same in color and so is carmine lake. Rose madder and the aniline color known as Rose Cathame or Geranium lake are also positive colors with little or no variation in hue and we can rely on them all to produce good pinks with more or less of an admixture of white. Now, we are not quite so certain what people mean when they speak of "shrimp pink," "Ethereal pink," "old rose" and "Magenta pink." We have an approximate idea, but nothing for which we can claim certainty. On the contrary, if I say to a brother artist that the Lilian Bird chrysanthemum possesses a perfect Rose Cathame pink in various strengths, he knows precisely what I mean and he sees the color immediately with his mind's eye—providing the latter is not color blind. Or, if I say a Vermillion pink, then my brother artist sees the color which is commonly called "shrimp pink."

Now, I would advise everyone who is interested in color and who would like to help along this idea of a "standard," to possess himself of a few artists' water colors, the moist ones in pans. They do not cost much and anybody can experiment with them to his own satisfaction, regardless of his want of knowledge in "the art." I have heard people say: "Well, you know I haven't an idea about mixing colors." Precisely. Then the only way to gain an idea is to experiment; you are sure of some result. An old time artist, it is said, when asked by a lady how he mixed his colors, replied "with brains, madam."

I think it is frequently the case that we do not know how much we can do until we try. Get a little color box and fill it with a few half pans of the common colors, viz: Chinese white, Gamboge, Chrome yellow, pale and deep, Orange Chrome, Vermillion, Rose Cathame, Carmine Lake, French Ultramarine, Prussian blue and Emerald green. There is nothing away from the standard these colors set for us; they are always the same the world over. Blunder along with your paint brush; don't be afraid of blunders; they have been the forerunners of some great discoveries. Mix and dab away and you will soon find out what makes

the green of the grass, the gold of the daffodil, the blush of the rose and the purple of sunsets, as well as the sapphire blue of the sky. But we must not go beyond our pink color today. There are innumerable pinks, as we well know, and we must study their characters.

I have before me the illustration of that beautiful bit of a basket, called "A Study in Pink and White," which appeared in the issue of the AMERICAN FLORIST for May 28 last. It is a lovely bit of work, in thorough Japanese good taste, and reflects great credit on Mr. Battles, who I believe designed it. But in point of color I conceive the effect was more beautiful than even the artistic arrangement. The pure tone of pink in the La France rose needs no word of mine in its praise, but the skill which recognized this fact and offset the dainty pink with the rush-green and peach bloom, deserves praise. Here we have a genuine symphony in pink, a hundred little tinges and tones of pink in blossoms and roses, which are well calculated to harmonize and blend perfectly. I have no doubt but what if we should throw a delicate pink light on the basket from one of those favorite umbrella lamps now in fashion we would produce a perfectly charming effect of rosy color, which would subdue the green and glow with the pink of the flowers.

In the La France rose we may recognize our carmine lake pink, but a pink purer and better than any our color box can afford. No pink rose, Mermet, Cusin, Gabriel Luizet or Gontier could look half so well with Mr. Battles' La France as the dainty blossoms he chose, which will appear all the more dainty in blushing color, under the pink light of the umbrella lamp. The truth is we must recognize the fact that another form in the peach-blow blossoms has given us additional interest in the rose. And this is something which no two varieties of roses combined can ever do, no matter how well the colors of the latter may agree.

We ought to seize every opportunity when arranging decorations for evening occasions to place our pink roses somewhere near the light—pink light, if we can obtain any. It is true that the latter is somewhat damaging to the green foliage, but in exact proportion to our loss in this direction there is a corresponding gain in the other, and our pink roses will look—well, I will say, dreamy.

Now, there are so many other pink flowers that I could say so much about that it is hard to make a choice of another illustration and then stop. I wish we could use poppies more than we do, but I fear these fragile and airy little fairies must ever prove fatal to the interests of the florist; we all know the truth of Burns' remark in Tam O'Shanter:—

"Pleasures are like poppies spread;
You seize the flower, its bloom is shed."

Yet for all that I have successfully used

the airy double vermillion pink poppy for evening decoration and it has possessed grace and beauty which no other flower it seemed to me could boast of. Try it under the subdued effect of lamp light and note its charming airy grace. I have found by experience that poppies picked in the morning hours do not last as well as those picked later in the day.

That old fashioned plant which we call "Dusty Miller" has just the right color of green to look well with our pink effects. The *Rhétic pink* (really our *Carmine lake pink*) *nasturtium*, with its perfect green leaves in company, gives us no end of opportunity in symphonies of pink, though pink of a less delicate nature than that we are familiar with in the *Mermiet* and *La France rose*. But we may obtain some beautiful effects of pink color with the *nasturtium*, some of the pink *geraniums* and the dainty little pink *Centaurea evanous*, who is in good company with our favorite "Dusty Miller."

I should say that in our arrangements of pink decorations we need follow only a few simple rules. Separate entirely one from the other flowers of similar form. Do not allow any *Rose Cathame pink* and *purplish pink flowers* to come in contact with each other. Be careful never to employ any red flower whatever in any arrangements where the dominant color is pink; white may be used always with charming effect, so may white flowers with a rosy tinge. But to combine a *Webb carnation* with a *Wilder* is death to the latter. Your pink color in other words is destroyed utterly.

To sum up the idea of a true sympathy in pink I should say this: Let us choose some one flower whose decided pink color and graceful form shall conform to our ideas and whose appropriateness to the purpose shall be unquestioned. In nine cases in ten such a flower will prove itself a *rose*. This we let everything else be absolutely subordinate except a bit of pink unless it be paler or less pronounced, not a flower larger or more showy, lest our one thought of beauty in our special flower be "side-tracked." No reds, no blues and no yellows, only the thought of the rose with its lovely blushing color. And if we can use them, an occasional help from the pink light of those charming little fairy lamps will be a great addition to the general effect. And our rose color will be all the rosier.

F. SCHUYLER MATHEWS.

Our Paris Letter.

"There is nothing in Paris more attractive than the florists' windows," is a remark one hears again and again from tourists, and it is true. A few weeks ago they were gay with heaths, pink and white, usually in baskets, the pots sunk in moss, and the whole set off by dainty pink and white ribbons; nothing was prettier or more popular. The "Paris mode" just now is to set the growing plants, full of bloom, into a round, low basket, usually with a high, round handle, arrange the colors to contrast to perfection, add a twist of ribbon around the basket and a stiff, high bow over the center or at the side, and it is complete. No foliage accords better with a flower than its own, and if it is not sufficient a pretty palm is set in. A very effective basket that I have seen repeated several times was a large *gardenia* plant with its glossy leaves, and once with but a single flower expanded; the basket was covered with a wide band of creamy satin, and a few loops were drawn up into the foliage.

The daisy time is nearly over, but for several weeks every florist's shop has had an immense pyramidal plant of the *marguerite* in full bloom beside his doorway. Lilies are gone for two months, but in August they will reappear. The common flower now in vogue is the *haciador's button*; it is shown in enormous bunches in every florist's window, in little bunches on all the flower stalls, is copied with wonderful accuracy for the ladies' hats, and gives its name to the latest color in cloth. A very pretty basket was arranged with yellow summer *chrysanthemums*, two large plants in full bloom, with a taller branch of pure yellow *calceolarias* between them, and a pink *crassula* in the foreground. The *gloxinias* have been very pretty, but are not so good for shop decoration on account of the inevitable cotton. Pink and white *peonies* are very much used with the early *gladioli*. A large basket made for presentation at a theatre was of summer flowers, *Baroness* and *Jacqueminot* roses in the lower parts, magnificent sprays of pink and white *gladioli* in the center, here and there a bit of yellow *calceolaria* and several long branches of *Spiræa palmata*, a very effective plant, with its feathery red flowers; tall loops of pink ribbon, braced inside by loops of wire, stood well up on one side of the square handle. A complete contrast to the above very artistic piece is the forget-me-not basket, which is quite the style; it is a flat, round basket about three inches high, with a tall, square handle, and is filled perfectly flat with a mass of blue like a solid bed of *turquoise*; the handle is trimmed with yellow and white pansies, or rather more gracefully with small pink *rosbuds* with their own foliage; no ribbon, and unless the roses are used not a leaf of foliage. The florists' show windows extend to the ground, and palms are a favorite decoration, with one or two brilliant flowers among them; a fine plant of *Lilium lancifolium rubrum* made a whole window beautiful in this way.

One plant whose value as a "florist's flower" we have entirely missed is the *clematis*; several florists here make a specialty of growing the finest varieties of this lovely flower in small, symmetrical plants for the market, such as *Undine*, *Edith Jackman*, *The Queen*, *Villette Paris*, *La France*; large flowering hybrids of fine colors are trained over a small trellis, forced very gently in a frame, and are wonderfully decorative. Two plants, a lavender and a rose, each with but one immense bloom, set into a wicker jardiniere, and trimmed with ribbons of lavender and white, made one of the most striking pieces I have seen. *Hydrangeas* are much used in this style of basket, as they harmonize with almost everything, or are very pretty alone. A white arrangement was composed of a background of *hydrangeas* of palest tint, longiflorum lilies, *gladioli* *The Bride*, which has its full desert of popularity here, *Lilium candidum*, and a cluster of *Begonia* roses to give a bit of color; each flower is used with its own foliage, and the whole effect is very loose and natural.

Paris is flooded with *crassulas* just now; they are a little stiff, but have the beauty of the short lived *bouvardia*, and last for days; the branches are grown of even length, and the top of the plant presents often an even surface of brilliant flowers. A very showy basket was shown yesterday made entirely of the plants in two shades of deep pink and crimson set loosely into a basket about three feet in diameter; one plant is often set in to

give brilliancy to a design in paler flowers or a jardiniere of palms and ferns, where they are most lovely. A very exaggerated style of basket was filled with two or three tree *carnation* plants with immense white flowers, the whole profusely trimmed with white gauze ribbon, yards of which were fastened to roses on the stems of the plants and on the basket.

The long, cold spring has had the effect of delaying the bedding in the parks to such an extent that many beds are only just set out, and very few are yet grown into beauty. One, however, impressed me as the most artistic bed in reds I have seen—*Begonia semperflorens rosea* and another deeper red sort, very thick, and at regular intervals among them the pointed deep red leaves of *Atkinson's cardinalis*, a dwarf border, and a sprinkling of the smallest of golden yellow *calceolarias*.

F. L. VAUGHAN.

Views on the Gardner Estate, Brookline, Mass.

Brookline is a suburb of Boston, and is one of the most beautiful as well as one of the most exclusive of the many attractive towns on the outskirts of the New England metropolis. That the estate of John L. Gardner, Esq., is a most charming spot, and that Mr. C. C. Atkinson, the gardener in charge, fully understands his business is convincingly shown by the views herewith presented. The grounds occupy an elevated position which overlooks the city of Boston and the harbor. Particular attention is paid to door decorations, hardy shrubbery and perennials occupying a most prominent place.

There are many magnificent old trees on the place. A beautiful shady path, bordered with *Narcissus poeticus* is shown in one of the illustrations. Another represents the gateway to the flower garden.

In the greenhouses are many choice specimen plants, among which are some noble azaleas which have on various occasions taken a foremost place in the exhibitions of the Massachusetts Horticultural Society. *Ericas* and flowering stove plants are also among Mr. Atkinson's special pets. Within a few years the collection of orchids has been greatly increased, and under skillful management is fast getting to be one of our notable collections.

W. J. S.

Exhibition Arrangements.

Rules and regulations are necessary, as undue advantages are liable to be taken by unscrupulous exhibitors. A suggestion is to print rules and regulations on the reverse page of entry blank, and word it to such effect that with the signature of applying exhibitor affixed, a sort of contract or obligation to respect the rules is made.

Make strong efforts towards the displays being ready, and opening of the exhibition in complete shape at advertised time. The first hours or the first day of the exhibition, the best of all in a flower show, because all is light and fresh, should not be wasted in hasty preparations. Inducements should be extended to have the crowd there on the first day, and, if necessary in getting ready, hire the hall a day earlier. The cost of one more day's rent of the hall will be well spent if it helps to give a snap and a good send-off to the show from the hour of opening. An enforced rule barring late arrivals from prize competition would no doubt also be a good measure.

In the cut flower department, and especially in the decorative effects and designs

VIEW ON THE ESTATE OF JOHN L. GARDNER, ESQ., BROOKLINE, MASS.

made of flowers, the arrangement of exhibits should be so fixed that more or less displays are replaced daily by new ones. Such will give an added freshness and life to the show that the public will appreciate, and if properly advertised as spoken of in these columns will induce the repeated attendance of many persons.

Judges and judging: I believe the majority of exhibitors at shows would agree that to men of good reputation who are actively engaged in the business should be

entrusted this responsibility. We should keep in mind that the future prosperity of our shows hinges on our efforts to-day toward securing unbiased judging upon proper standards. Amateurs, society ladies and artists no doubt would discriminate intelligently on some of the vital points, but not on so many of them as can a worker in that line, while they would hardly consider the practical features at all. Secure from a neighboring town the services of a man of sense and

reputation who is up in plants to judge the plants and cut blooms. Don't ask him, however, to judge the designs and decorations, but get a worker in flowers for that part, one who is up to all the latest doings of the day, and is fully posted.

Clubs should be prepared, through a committee or otherwise, with instructions to the judges. Standards are apt to be local, and towards which exhibitors have been working, and their effort should

meet with consideration. An exhibit class common in prize lists is puzzling to judge is that of "an original design." Definitions of the words help us little to an interpretation of meaning definite and applicable to our case. Notice these versions.

A form or use of a form or a shape for an applied purpose, that had originated in the mind of the exhibitor, and that may or may not have been shown by him before.

A design originally new to the current season, and not shown in that locality before, though not designed by the exhibitor, being, however, original in character.

An idea of borrowed origin by the exhibitor to produce a certain defined effect but applied different from anything he knew of before.

Work of similar character to the metal bells, decorative, as mentioned by Mr. Matthews on page 877, the application for a certain use being most particularly the feature of originality.

An entirely new shape or form originated in the mind of the exhibitor for this occasion.

More versions could readily be framed that would be entitled to some claim in the case. Such classes should be definitely interpreted to the judges and intending exhibitors, or left out of my list.

All ordinary vases or receptacles for holding cut flowers should be furnished to exhibitors.

All display and show cards and the distribution of advertising matter by exhibitors should be strictly controlled by the club. The prize and display cards authorized and furnished by the club might be provided freely, and with able help at hand during the show, to properly and neatly fill out or engrave the same for exhibitors. Instead of delegating it to others the secretary should personally attend to all the duties belonging to his office that he can do, as from his familiarity with the details he is fitted to readily accomplish much more than can any other.

A committee to pass on the merits of exhibits of meretricious character, the good faith of the exhibitor, etc., might oftentimes spare the judges much time and the performance of unpleasant duties.

Where a hall or exhibition committee exists, members thereof should have sweeping control of everything displayed and their acts should be decisive and final.

DANIEL B. LONG.

Buffalo, N. Y.

Blue Pansies.

Several months ago Mr. Richard Ferris did me the honor of noticing in your columns something that I had written on the subject of color, thereby helping to unravel the much tangled subject of the nomenclature of color, as all intelligent thought and discussion will help the cause.

In the last paragraph of Mr. Ferris' article he says, "Mr. Battles surprises me by the statement that to his mind vermillion was 'dull scarlet,' and that there were no blue sweet peas nor pansies." Grand blue sweet pea is a pure indigo blue, no purple about it, and Emperor William pansy is also blue."

Now a person to read Mr. Ferris' article would suppose that I had made the very foolish and sweeping assertion that in all the world there are no blue sweet peas or pansies. When I read his article, the first thing that came to my mind was the quarrel between Sarah Gamp and Betsy

Prig. Many of the readers will remember that charming bit of Dickens' wit, when these two old-school nurses have their last quarrel and Sarah says: "No, Betsy! Drink fair wotever you do!" So it occurred to me to say to Mr. Ferris: Quote fair, whatever you do. Now let us see what I did say about blue pansies and blue sweet peas.

On page 298 of the AMERICAN FLORIST, I made use of these words: "Sweet peas are described as being a 'Grand blue' and pansies as being a 'Beautiful blue.' We have seen both of these flowers with all the shades of light lavender to the darkest shade of purple, but we can not call to mind ever seeing them blue." During the winter I have handled many thousand pansy flowers, and looked at many thousands more, and am of the same opinion.

A prominent Philadelphia grower who is very much interested in color bought some seeds of the Emperor William pansy and several days ago sent me some flowers. These I sent to a number of our largest art and dry goods stores to get their opinion; from the latter I obtained also samples of ribbons that they would sell to match the pansies. Moreover, I asked a number of customers, flower lovers and flower buyers, and not in a single instance did any one call the Emperor William pansy blue; in fact, all were far more emphatic than I was in my original statement.

I thank Mr. Ferris for calling my attention to the Emperor William. I should be very much obliged to him if he would name a variety of violets that he considers blue, and would take pleasure in putting them to the same test. Any knowledge I may possess of color, I have sought after and have gladly received information from all sources at my command. In the absence of any standard nomenclature, I have always strived to conform to the popular opinion of those dealing in, handling or using colors.

H. H. BATTLES.

Celsias.

The celsias are members of the mullein family. Some of them are useful plants for greenhouse decoration, and they are rather uncommon in cultivation. *C. Areturus* and *C. cretica* are the best species. They are natives of Crete, or Candia, an extensive island to the south of Greece. *C. Areturus* was introduced in 1780, and *C. cretica* nearly thirty years earlier. The former is a plant of shrubby habit, from four to five feet high, with dark green oblong leaves, the blades of which are three or four inches long, the petioles half that length, and the margins deeply notched. The flowers are an inch and a half in diameter, of a deep yellow color, with brownish marks and hairs about the base, and borne in long terminal racemes, on pedicels an inch in length.

This species bears a strong resemblance to *C. cretica*, for which it is often mistaken in cultivation. The latter plant, however, is much larger in every respect, often from six to eight feet high, and inclined to branch nearer the top of the stem than *C. Areturus*. The flowers also exhibit other differences. They are almost sessile, that is, without individual stems or pedicels, sweetly fragrant, and the lower half of each is of a paler yellow color than that above.

Both plants are of biennial duration, and succeed admirably under the same treatment. The seeds should be sown in August and September to obtain plants that will give a succession of bloom during the following spring and summer, and

in winter for a supply to plant in the open garden and flower late in summer and early in autumn. Sow in pots or pans containing loam, leaf mold and sand; an equal portion of each in mixture. Those sown in winter should be placed in a warm greenhouse until they germinate, and grown on in small pots. Turn them into a cold frame when danger of frost is over, finally transplanting them in the open early in June. The seeds for spring and summer flowering plants may be raised in a covered cold frame, transferring the seedlings to pots when large enough. They will require potting two or three times, the last shift being into 6-inch pots, and the protection of a warm, sunny greenhouse when frost makes its appearance. Celsias grown in pots require good soil, similar to that used for seedlings, but coarser. They make rank growth in very rich soil, and flower best in that of medium quality.

Cambridge, Mass.

M. BARKER.

The Silva of North America.

By Prof. C. S. Sargent. Houghton, Mifflin & Co. Two volumes have now appeared, ten more are to follow. The price of each is \$25.

In this magnificent work it is the purpose of Prof. Sargent to illustrate and describe every kind of tree indigenous to North America, north of Mexico, and of which there are now known 422 species and several varieties. He styles as trees all woody plants that rise from the ground with a single stem, and designates as shrubs the woody plants that habitually branch at the ground into several stems. The volumes are large quarto.

In the arrangement of the silva the sequence of orders and genera is the same as that given in Bentham and Hooker's *Genera Plantarum*. And as regards the nomenclature of the plants he tells us "I have adopted the method which imposes upon a plant the oldest generic name applied to it by Linnaeus in the first edition of the *Genera Plantarum* published in 1757, or by any subsequent author, and the oldest specific name used by Linnaeus in the first edition of the *Species Plantarum* published in 1753, or by any subsequent author." This has given rise to some radical changes in the names of some of our common trees.

The first volume is filled up with the thirteen orders running from Magnoliaceae to Liliaceae; and thirty-four species and one or two varieties are dealt with in detail. Among all of these, however, the magnolias, lindens and hollies are the trees that concern us most. The first plant described is *Magnolia grandiflora*, and we are told that from about on it must be called *M. fedida*! The yellow flowering cucumber tree, *M. cordata*, is given as a variety of *M. acuminata* and we are informed that it is not now known to exist in a wild state. We also learn that the tulip tree (identical with our native species) is too a native of China.

Both gordanias are figured. The loblolly bay (*G. lasianthus*) sometimes becomes a tree 60 to 70 feet high. What a splendid sight such a specimen must be in late summer when in bloom. *G. Altamaha* is the Frankia and what we used to call *G. pubescens*. Although found wild in tolerable abundance about a hundred years ago, it is not now known to exist in a wild state.

As regards holly trees we learn that the evergreen one (*Ilex opaca*) which is found in moist land in the southern states, grows

VIEW ON THE ESTATE OF JOHN L. GARDNER, ESQ., BROOKLINE, MASS.

in dry gravelly land in the north. And among deciduous hollies *Ilex monticola*, because of its large globular scarlet fruit and ample foliage is recommended as "the most ornamental of the deciduous hollies and a desirable garden plant."

Vol. II. is devoted to the trees belonging to the orders *Cyrtillaceæ*, *Celastraceæ*, *Rhamnaceæ* and *Sapindaceæ*. Of these seventeen genera and twenty-nine species and a few varieties are given. Among all of these, however, perhaps the *Euonymus*, buckeyes, and maples

are the trees that will interest us most. *Euonymus* must from this on be spelled *Evonymus*. *Æsculus glabra*, *Æ. octandra* and *Æ. Californica* are the three arborescent species of the country; the common horse chestnut, *Æ. Hippocastanum*, is a native of the mountains of Greece. Half the volume is devoted to the maples, and a vast amount of most interesting information is given about them, and here again the nomenclature gets a merciless shaking up. The sugar or rock maple is generally known as *Acer*

saccharinum, but Prof. Sargent rejects this name and calls it *Acer barbatum*, and applies the name *A. saccharinum* to the white or soft maple which we have always known as *A. dasycarpum*. It will be many a day before our nurserymen can reconcile themselves to these radical changes, but adopt them eventually they must, for the *SILVA* is the authority. *Acer Negundo* is the accepted name of the box elder. In German nurseries what is sold as *Negundo Californicum* is not the Californian variety at all but a mid-

continental variety of the common box elder with pale purple glaucous branchlets; it is known in our nurseries as the purplestemmed box elder. The true Acer Negundo var. Californicum has constantly trifoliate leaves, darker bark than the type, pale pubescent branchlets and fruit, leaflets often lobed and always densely coated on the under side with pale pubescence.

Many tropical trees, common in the West Indies and Central America, and which reach up into Florida, Texas and California, are also necessarily included in the *Silva*. The plates are full page and the drawings from life. They illustrate young wood, foliage, flowers and fruit, and analysis of the flowers and fruit have been prepared with exceeding great care and precision. W. F.

Disa Grandiflora.

This is undoubtedly the most showy of all the terrestrial orchids, and when in flower it is a noble object. The main trouble is that it is considered to be a rather difficult plant to manage, but the plant is all right, and in most cases the treatment that it receives is not suited to the requirements of this plant. It is a native of the high lands of South Africa, and its natural habitat is beside streams and water pools, where it has plenty of water and shade and by keeping it under the same conditions when in cultivation it does well and grows freely.

I had charge of a number of disas some years ago, and under the following treatment they did well. They were grown in a camellia house, with a night temperature of 45°, and were never allowed to get dry. When in full growth they were syringed two or three times a day and the atmosphere of the house kept moist.

When in growth it is a good plan to stand the pots in a pan of water until it is done flowering, then it should be kept much drier until growth commences, when it should be repotted, but at no time should it be kept dry.

The time to repot is as soon as the roots begin to grow, generally in February, and the best soil for them consists of rich, fibrous loam, fibrous peat, and sharp sand, with a few lumps of well decayed cow manure in it. Fill the pots about one-third full of drainage, and cover the surface of the soil with living sphagnum. The main cause of failure in its cultivation appears to be lack of water; if the drainage is good it cannot get too much moisture when it is growing. It is imperative to keep it shaded and syringed overhead several times a day, for if it is neglected in this respect it soon becomes a prey to thrip and red spider.

In habit it is lily-like, and the stems are erect, covered with bright green leaves, and from eighteen inches to two feet in height, bearing from two to six flowers, which are large, with bright scarlet sepals and petals tipped white and green, pale yellow inside. To be successful with it keep it cool, give it plenty of air, shade, and water, and keep clean of thrip and red spider. JAMES S. TAPLIN.

Maywood, N. J.

Some Useful Climbers.

Quite a considerable number of plants could be included under such a heading as this, but the object in this case is rather to briefly note a few that may be readily grown and used to advantage in various arrangements of plants and flowers. Such uses will soon suggest themselves to the decorator if he be supplied with some of this material, and will enable him to give a pleasing variety to his work without the expenditure of any extra capital.

Among such plants *Paulinia thalictifolia* is one of the prettiest, having bright green pinnate leaves that are nearly triangular in outline, and from four to ten inches in length, the leaflets being very small, and when developing are frequently pinkish, the whole effect being light and graceful and bearing some resemblance to the fronds of *Maidenhair ferns*.

This plant does best in a warm house and moist atmosphere, and may either be grown as a climber or pinched back occasionally in order to give it bush form.

Paulinia thalictifolia is propagated by means of cuttings, the latter rooting readily when kept rather warm and close for a time, and if nicely grown in three or four-inch pots would soon find a market.

Another pretty little vine is *Campsidium filicifolium*, which, like the preceding, was introduced about twenty years ago. This *Campsidium* is of twining habit and has narrow pinnate leaves of dark green color, and when large produces slowly orange flowers of tubular form, something like those of the *bignonia*. It is of free and rapid growth, and cuttings of young wood root quickly.

Some of the *cissus* also make useful subjects, especially the well known *C. discolor*, which, though old, is one of the handsomest climbers in cultivation today. Cut sprays of this species may be used to advantage where the stems can be placed in water, and like most other foliage when cut is improved in lasting quality by total immersion in water for some time before being used.

Another pretty species of this genus is *C. Lindenii*, this being entirely distinct from the foregoing, and has large, cordate leaves, the ground color of which is light green, this being blotched with grayish white.

C. Lindenii, like its congener, is easily grown in moderate heat, and its stems are easily propagated. Still another showy climber is that best known under its old name of *C. porphyrophyllus*, though now placed among the *Pipers*.

This plant is of strong growth and produces rounded, heart shaped leaves of bronzy green, these being perfectly spotted with pink, the color being brightest on the young foliage. *C. porphyrophyllus* looks best when growing on a wall, and to which it will cling like ivy, or when rambling over rockwork it is equally at home.

Passiflora trifasciata is another addition to our list, though by no means a new one, having been cultivated more or less for nearly twenty-five years. It has the trilobed leaves common to the genus, these being dark green in color and marked down the center with a broad band of reddish coloring, while the under side of the leaves is purplish. *P. trifasciata* may be multiplied by cuttings almost as readily as a *cissus* and if kept growing on rapidly is remarkably pretty.

Both the *cissus* and the last named soon become disfigured if they are allowed to become infested with mealy bug, and as it is not easy to clean them after they get

in such condition the best plan is to avoid the contingency by propagating clean young stock from time to time.

Echites rubro-virens and *E. picta* are also pretty climbers and of moderate growth, the first being the most showy, its opposite, entire leaves being spotted and netted with red and sometimes yellow on a bright green ground. *E. picta* is not so striking, its variegation consisting of an irregular band of white down the center of the leaf.

These also are warm house subjects, and grow best in moderate shade and abundant moisture.

In conclusion, the very useful *Ficus repens* (or *stipulata*) should not be forgotten, and for certain purposes the variety *minima* may be even more suitable than the type, its foliage being smaller and neater, and, of course, this can be readily reproduced in quantity by means of cuttings.

I have also tried *Ficus repens* as an outdoor climber, though it has not proved an entire success in that capacity, as under that treatment its growth was too slow. Holmesburg, Pa. W. H. TAPLIN.

Watering roses in summer is of more importance than many suppose, particularly when first planted; if they are kept short of water at the roots during very hot weather the plants will certainly suffer considerably, but to keep the whole body of soil in the benches wet is very likely to cause it to get sour and unfavorable to root action. To avoid this it is preferable to press the soil firm immediately around each plant at the time of planting, thus forming a hollow dish to hold the water required for each plant, leaving the balance of the soil loose and somewhat in ridges till active root action takes place and in reality till the roots are prepared to spread out all through the soil. This has a tendency to throw all the water into the hollows where it will do the most good and keep the balance of the soil fairly dry and healthy. Then after the first batch of weeds have all been removed and the roses have started new roots spreading in all directions through the soil the whole can be pressed fairly solid (we usually tread it with the feet in the center beds and beat it down with a brick or block of wood on the side benches), then with a small blunt toothed rake scratch it all over evenly and put on a very thin mulching of well rotted cow manure. This will hold the water just where it falls and keep the soil moist enough without flooding it with water, or in other words will keep the plants in a healthy growing state by syringing them well with the hose. This is the only watering ever necessary, if rightfully applied, till the plants become very large toward spring.

If plants are overwatered in the early stage of their growth it will make them produce a weak, soft growth which is unnatural to them, on the other hand if they do not get sufficient water at the roots they will hardly make any growth at all and what they do make will be

ORCHIDS IN THE CONSERVATORY OF JOHN L. GARDNER, ESQ., BROOKLINE, MASS.

small wiry wood which will not produce a bud for a long time.

Another feature in watering is of more importance than many suppose, which is tepid or warmed water. A great many growers, particularly those having hydrant water for use, claim that it makes no perceptible difference whether the water be at 40° or 60° when applied, but it is just as reasonable to take a man when he is hot in the middle of summer and pour a pail full of cold water over him as it is to pour a lot of very cold water over a house of plants which are growing in a mean temperature of 80°, which is about what the temperature of a greenhouse averages for several months in summer. Anyone can demonstrate this for himself by watering for two or three months one house with water say at 65° and another with cold water such as comes from a well.

Water such as is usually supplied to cities through hydrants in summer is not very often below 58° to 60°, as the reservoirs are as a rule exposed to the sun's influence, but in winter such water is often very much too cold for the general health of the plants to which it is applied.

In pressing the soil firm about the roots of the plants as above described, it should always be done when the soil is fairly dry, otherwise it will be very apt to become very hard and cake, and consequently become unfavorable to good root action. We usually withhold water in any shape for a day before doing it, and the heavier the soil is the more important to have it dry before pounding.

J. N. MAY.

Chicago.

The beach work at Lincoln Park is now progressing rapidly. It is a monumental job and many difficulties had to be overcome. The plan is to build over a mile of new beach a short distance out in the lake and parallel with the shore, the water space between the new and old beaches to be used as a rowing course. The new beach consists of sand dredged out of the lake and thrown up in a long ridge, the side toward the lake being paved with limestone and granite blocks, so that it presents the appearance of a stone-paved street sloping toward the surface of the water. At the top of the stone beach is a broad promenade of cement work, back of which is a roadway 45 feet wide, and the bank which slopes toward the canal or rowing course, is seeded down to grass, and planted with trees and shrubs, each being set in a pocket of good soil. This has been done as far as the work has already progressed and will be continued throughout its entire length. The rowing course will be a mile and a quarter long. This enormous work will cost over a million of dollars.

Last Friday afternoon lightning struck the big chimney at D. B. Fuller's establishment at Downer's Grove, and caused damage that it will cost \$600 to repair.

At Park Ridge E. Weinhoeber & Co. have added three new houses, one 125x18 and two 125x10 each. Mr. Weinhoeber finds the Duchess of Albany a very beautiful and fast selling rose, but says that with him it has not been profitable to grow.

Mr. W. J. Smyth, for several years past with E. Weinhoeber & Co., will open a store on his own account the coming fall.

The Grant monument at Lincoln Park is nearing completion. The figure is of bronze, of heroic size, and represents the great general as he appeared on the field, in the saddle. The monument will be unveiled in October.

Mr. J. T. Anthony is well along on the road to recovery from the effects of the surgical operation performed July 8. He was out of the house for the first time last Saturday, when he enjoyed a drive through the parks. He is looking well and bids fair to soon be stronger and enjoy better health generally than for many years past.

There is a project on foot to add a botanical section to the Horticultural Society of Chicago, and to invite the botanists of the city to join. There are about twenty botanists in the city and they have no organization as yet.

Mr. H. H. Hindshaw, of the Hort. Society, is an enthusiastic collector of fossil plants. He has a very large and interesting collection of specimens, quite a number of which have never yet been described.

Among recent visitors to the city were Messrs. John Thorpe, Pearl River, N. Y.; E. G. Hill, Richmond, Ind.; A. C. Brown, Springfield, Ill.; M. A. Hunt, Terre Haute, Ind.; D. B. Long, Buffalo.

The recent ball game was such a hilarious affair that it has been decided to repeat the experience at an early date—as soon as all those who participated in the last one have been discharged from

the hospital. The exact date of the great event has not yet been decided upon.

At a called meeting of the Florist Club held last Friday evening, Mr. James D. Reynolds introduced the following resolution which was adopted by a unanimous vote:

WHEREAS, the Director-General has announced that he will not at the present time appoint a Chief for the Bureau of Horticulture in the World's Columbian Exposition, but that he fully appreciates the paramount importance of organizing the department of Horticulture without further delay. And

WHEREAS, we recognize in John Thorpe the man pre-eminently fitted, both by natural ability and wide acquaintance, for the organizing and perfecting of the department. Therefore be it Resolved, That the Chicago Florist Club most heartily endorse Mr. Thorpe, and urge upon Director General Davis the propriety of his immediate appointment for the head of the division of Horticulture.

A committee of three was appointed to present the resolutions to the Director-General, and to urge upon him the necessity of more outdoor space than provided by the present plans.

A standing committee of five, consisting of Messrs. Vaughan, McAdams, Weinhoeber, Lane and Bentley, was also appointed, to act for the club upon matters connected with the Fair that might arise between meetings and demand immediate action.

It is believed that the long delay in the organization, of the floricultural division at least, is at an end, and that work will now go rapidly forward.

At the last meeting of the Florist Club Mr. J. C. Vaughan exhibited a flower spike of Madame Crozy canna bearing eight fine flowers, and a very pretty specimen of *Dracaena fragrans* Lindenii.

Business continues dull; very dull, indeed. Nothing else can be expected at this season of the year. Of course, still some of the retailers entertained a lingering hope that this season might prove an exception, which hope was rudely dashed to pieces. Despite the very dull season the very few really good roses that appear in the market find a ready sale at fairly good prices. Business or not, the retailer is compelled to carry some stock.

Sweet pens are a perfect glut in the market and can be bought for \$1 a thousand. The varieties known as Nellie James, Blanche Ferry or Painted Lady sell the best. By the way, can anyone tell the difference between the three? White and lavender (Butterfly) come next in order of importance. There is very little demand for reds or purples.

Gladiolus and *L. nuratum* are making their appearance, but meet with a very limited demand.

For some reason no pink pond lilies are seen. There are constant inquiries for this flower, but none can be had in our market. What has become of our friends over in Grand Haven, Mich., who sent us some good flowers last season?

Niles Center boasts of producing more fine flowers to the square foot than any other suburb of Chicago. It also takes great pride in a base ball nine composed of florists. This nine has challenged Chicago, and the local florists have accepted an invitation to play a game next week, at the Niles Center grounds. The struggle will undoubtedly be an interesting one. One of the Niles Center boys has asserted that the strength of the members of the Chicago nine lay in their jaw, and the latter propose to resent this imputation by polishing off their opponents in a way to surprise them. We will know all about it after the post mortem has been held.

Boston.

From present indications the delegation from Boston to Toronto will be much larger than that to any previous convention. A good many ladies will be in the party.

Very low rates have been secured over the Canadian Pacific R. R. and no certificates will be required in order to secure reduced fares. The route is over the southern division of the Boston & Maine (formerly the Boston & Lowell) through Lowell, Nashua, Manchester and Concord to Newport, Vt., and thence by Canadian Pacific R. R. via Montreal, where it is expected that the Montreal delegation will join the Boston party and accompany them to Toronto. The route lies through the most picturesque regions of New Hampshire and Vermont, and much pleasure is anticipated from this portion of the journey. On account of the meeting of the Nomenclature Committee at Toronto on Monday, August 17, it will be necessary for some of the party to leave Boston at 7:15 on Saturday evening, arriving at Montreal Sunday morning and leaving there on Sunday evening, so as to reach Toronto early Monday morning. The main party will leave Boston at 9 A. M. Monday, August 17, going through without stop, and arriving at Toronto early Tuesday morning, the opening day of the convention. The first party will have a day to spend in the quaint and interesting city of Montreal. The second party will have a day-light trip through New Hampshire. Persons wishing to join either party are requested to communicate as early as possible with Wm. J. Stewart, 67 Bromfield street, Boston, who will arrange for sleeping car accommodations, and from whom tickets should be procured.

The crack bowlers of the Gardeners' and Florists' Club of Boston have commenced practice at the Allen gymnasium, where the famous tournament of 1890 took place, and judging from the interest displayed they do not propose to give their opponents a "walk-over."

The cut flower market continues dull, the seaside and summer resort trade not having materialized up to date.

W. J. S.

Toronto.

Toronto has been having a "big time" this week; 20,000 strangers have been in the city and a lot more would have been here but for insufficient train accommodation. It is said that the National Education Association never had so successful a meeting. Yesterday 10,000 people, present to hear the public school children, etc. sing, went fairly "off their heads" over American and British patriotic songs. No doubt every member of the S. A. F. will see accounts of it in his local paper, as there are teachers here from all over the continent.

The Florists' Convention here promises to be just as much of a success in its way; every one of the local committees is working with a will which is bound to bring good results. The Gardeners' and Florists' Club hopes to see every member of the S. A. F. in this city during the convention in August.

Mr. Thos. Manton continues to receive applications for space for trade exhibits of all kinds. Intending exhibitors should apply early.

Circulars have been sent to all secretaries of clubs whose addresses could be obtained, asking them to bring before their respective clubs the matter of elect-

ing delegates for the meeting on the Tuesday of convention week. It is hoped that a large number will be present, as much good and useful work may be done.

Next week (22nd and 23rd) the annual flower show of the Toronto Electoral District Society will be held and there is every indication of its being one of the finest shows ever held here. Mr. J. P. Edwards, the energetic secretary, is introducing some new features; judging by points is to have a trial; plants will be stood on the floor instead of on benches, as was done formerly. E.

Buffalo.

The usual summer solstice has its effect in the annual dullness of trade. The leading retail places of business now close at 6 P. M.

J. H. Rebstock has broken ground for two houses, 25x100 feet each on Elmwood avenue, near Utica street; a new locality for greenhouses, and being at the center of a populous district, it should meet with success as a retail establishment.

William Scott furnished a variety of warfare implements and accoutrements done up in flowers, such as mounted cannons, tent, drum, mortar, and the like, for gracing the tables in Music Hall on the Fourth, at a citizens' banquet tendered the Society of the Army of the Potomac during their annual celebration and convention held in this city. Incidental to this occasion a vast display of the national colors was made from end to end of the principal streets. On such occasions it would behoove the craft to have an eye open for business beforehand and induce the use of nature's greens, at least in part, in such displays. The prices paid out here and there for the mere putting up and loan of the material used so monotonously would be ample remuneration to us for more telling floral effects combined with flags and such. You owe a duty to yourselves next time, boys.

Daniel B. Long's window display now regularly consists of a large shallow pan filled with pink and white pond lilies and the surrounding space filled with wild fern clumps bedded in bright green moss, which makes a fine setting for vases of flowers, etc. The combined effect of all on bright mornings is refreshing to a marked degree and catches the eyes of many flower lovers.

Everyone that ever goes away at all is going to the Toronto convention, and why shouldn't they? A recent visit there demonstrates beyond peradventure that the Toronto boys are as alive and up and doing in the interests of the occasion and that a right royal British-American welcome will be extended to all, with a new diversion ready for each leisure hour. There is some talk of closing stores for one day here, and thus giving employees and all a chance to go.

Philip Breitmeyer, of Detroit, paid this city a hasty visit last week. James Galvin, of Newport, R. I., is paying Buffalo a visit.

Prof. J. F. Cowell will attend the teachers' convention in Toronto this week. Facing so much sweet learning quite necessitates a body guard, so where could one more reliable be found than our own and only Great Scott, who will accompany him.

The Florist club has placed the details of arranging for the coming chrysanthemum show into the hands of the managing committee, with power. At a recent meeting of this committee, William Scott, J. F. Cowell and Daniel B. Long were

made a committee on subscription. J. F. Cowell, C. H. Keitsch, W. A. Adams, and J. H. Rebstock were appointed a committee to get up rules and regulations and spread prizes on the former issued premium list. The dates for the show have been fixed for November 12, 13, and 14, and Music Hall has been engaged for the purpose. Considerable enthusiasm is manifest, so the prospects of a successful show are favorable. L. B. D.

Philadelphia.

The coming convention seems to be the uppermost thought in the minds of most florists about here, and the question, "You're going, arn't you?" is often heard. Some of our bowlers expect to be there, and have great expectations.

August Lutz has torn down three small houses, and is building two larger ones to replace them.

Mr. Walter Coles has decided to settle in Kokomo, Ind., and started with his family and household goods for his new home a few days ago. He will be about 100 miles from Chicago, and expects to do considerable business in that market, as he is favorably located for shipping. We wish him success.

A few of the florists, under the guidance of Commodore John Westcott, will soon take their annual cruise on the waters of Barnegat Bay. A few of the trade from New York and Brooklyn are expected and some very large fish will no doubt be hooked, if not landed.

H. H. Bayersdorfer returned home from Europe July 15, where he has been stocking up for fall trade.

The return game of ball between the Dreers and Craigs was played in the rain Saturday last. The game was won by the Craigs. Score, 7 to 1. W.

OBITUARY.

ALEXANDER FRASER, aged about 60 years, a well known citizen of Baltimore and prominent among the florists and gardeners of Maryland, died July 15. Mr. Fraser had been troubled for a long time with a tumor on his shoulder. A few days before his death he went to the hospital to have it removed. His physician had advised him to submit to the operation, as to allow the tumor to remain was certain death. The removal of the tumor was also, he was told, attended with great danger. The tumor was removed, but it was found that the roots had penetrated to vital parts, and all efforts to save him were futile.

Mr. Fraser was born in Scotland. He came to this country at an early age and entered the employ of Mr. Robert Buist, of Philadelphia. He married a Scotch lady in Philadelphia and then went South, where he remained until 1861, when he returned to Maryland and took charge of the greenhouses of Mr. Harris, a gentleman who then lived at Waverly. Afterwards he became gardener and florist for Mr. John Ridgely, of Hampton. About twenty years ago he was engaged by Mr. W. T. Walters to take charge of his gardens and greenhouses at "St. Mary's," Woodburn avenue, east of Govanstown, where he has since resided. He was three times married. He leaves a widow and three children in comfortable circumstances. Mr. Fraser was reputed to be the best grape grower in Maryland. His excellent productions of this fruit on Mr. Walters' place have won the admiration of leading gardeners of this and other states. He

always took the first prize at every exhibition of the fruit he participated in. As a florist he is said to have had scarcely a peer in Maryland. He was very popular among the florists of Baltimore city and county.

News Notes.

MR. ALBURN, MASS.—Mr. H. P. Jenkins, formerly of Montreal, has been located here since May 1. He has the greenhouses on Coolidge avenue formerly owned by Mr. Treat.

SADDLE RIVER, N. J.—Spring sales of bedding plants were one-third larger than previous years. Good geraniums in 4-inch pots retailed at \$1.50 a dozen. Supply not equal to demand.

THE Georgia State Horticultural Society will hold its annual meeting at Quitman July 29 and 30. P. J. Berckmans of Augusta, is president and T. L. Kinsey of Savannah, is secretary.

KOKOMO, IND.—W. W. Coles, formerly of Lansdowne, Pa., has located at this point, and will at once begin the erection of a range of greenhouses. He will grow flowers for the Chicago market.

INDIANAPOLIS.—At the coming chrysanthemum show it is expected that silver medals will be offered for the finest display of orchids. Mr. Wm. G. Bertermann is expected to return from Germany the latter part of August.

BROOKLYN, N. Y.—Mr. Richard Metcalf sailed on Wednesday, July 15, on the steamship City of Berlin for Europe. He will visit all the leading florists of England, Germany and France, expecting to return sometime in September.

PORTLAND, OREGON.—The quarterly meeting of the State Horticultural Society was held here July 14 and 15. Among the matters discussed was the subject of an exhibition of the horticultural products of this state at Chicago in 1893.

PROVIDENCE, R. I.—John A. Macrae has purchased the establishment on Smith street formerly owned and conducted by F. Macrae, and will continue the business there. The latter gentleman has started a new place on the same street.

GREENVILLE, O.—Spring plant trade was at least 25 per cent. larger than last year. Geraniums in 4-inch pots retailed at \$1.50 a dozen. There was an overstock of geraniums and clematis. More call for begonias, vase work and window boxes.

SPRINGFIELD, MASS.—Mr. H. Grant cut 80,000 carnations from two houses 22x101 each, from October 1 to July 1. The result of hail storm did considerable damage to the glass of the Mielles Horticultural Co., of this city, and to that of Dexter Snow at Chicopee.

BAY CITY, MICH.—Through the influence of the Bay County Horticultural Society there will be offered for floral exhibits at the Agricultural Fair to be held September 15 to 18, premiums to the amount of \$100. The floral exhibits will be under the superintendence of a committee from the Horticultural Society.

SAN FRANCISCO.—At the last meeting of the California State Floral Society the committee on the floral exhibit at the World's Fair reported that they would soon confer with the commissioners to the Fair and would ask for \$25,000 to defray

the expense of collecting and exhibiting at the Fair, plants grown out of doors in California, which owing to climatic conditions would have to be housed in the east.

ST. PAUL, MINN.—The summer meeting of the Minnesota State Horticultural Society was held July 10 at the State Experimental Farm near St. Anthony Park. There was a very interesting programme and the attendance was large. At the exhibition held at the same time premiums were offered for collection of cut flowers, collection of cut roses, pansies, carnations, floral design and hand bouquet. E. Nages & Co., of Minneapolis, captured first premium in each class, except that of roses, which last went to Ida C. Sewall, of St. Anthony Park.

SUMMIT, N. J.—The New Jersey Social Florist Club have recently received a very fine addition to their library, namely, "Ridpath's History of the World," in three large volumes of 700 pages each, beautifully bound, from Mr. H. H. Battles, of Philadelphia, which the club begs to acknowledge with their best thanks to the generous donor. Mr. Battles takes great interest in flowers and everything appertaining thereto, and, although always a very busy man, yet he finds time to think of the young men growing up in our business, as the above will testify. His clear, lucid articles in the FLORIST are full of interest and instruction to all, more particularly to the members of the New Jersey Social Florist Club, and we earnestly wish him every success. A kindly greeting awaits him whenever he can afford the time to visit our club.

LONDON, ONT.—November 10, 11 and 12 are the dates decided upon for the chrysanthemum show of the Forest City Florists' and Gardeners' Society. The exhibition will be held in the city hall. The indications are that the show will be a success this year, as the growers are taking more active interest, and already the public is evincing an interest not before felt, thanks to the local press. From present appearances roses and carnations are going to be plenty next winter, as nearly all are making extensive preparations, and fully double the amount will be planted. Notwithstanding the unfavorable weather business has been rather above the average.

Names and Addresses of Chairmen of Committees of Toronto Gardeners' and Florists' Club for S. A. F. Convention, August, 1891.

Reception Committee—Mr. John Chambers, Superintendent Parks and Gardens, St. Lawrence's Hall, Toronto, Ont.

Trade Exhibit Committee—Mr. Thomas Manton, florist, Eglinton, Ont.

Entertainment Committee—Mr. W. J. Laing, 401 Huron street, Toronto, Ont. Ladies' Committee—Mrs. Fraser, florist, Spadina Crescent, Toronto, Ont.

Introduction Committee—Mr. F. G. Foster, florist, Hamilton, Ont.

Decoration Committee—Mr. C. Arnold, florist, 521 Queen street, W., Toronto, Ont.

Finance Committee—Mr. J. H. Dunlop, florist, corner of Bloor street and McKenzie avenue, Toronto, Ont.

Printing and Bere Committee—Mr. S. E. Briggs, of the Steele Brothers Co., corner of Front and Jarvis streets, Toronto, Ont.

Bureau of Information—Mr. George Vair, care Sir D. S. McPherson's Chestnut Park, Toronto, Ont.

321 Market St.LANDSCAPE GARDENING, by Samuel Parsons,
superintendent of parks New York
City, G. P. Putnam's Sons, New York.
This is a beautifully gotten up and delight-
fully written book. The author treats
his subject with charming gracefulness
and displays an uncommon familiarity
with all manner of trees and shrubs and
other plants employed in outdoor garden-
ing. He dwells upon the landscape pic-
tures of every season of the year and foli-
age effects. He becomes enthusiastic
over the old-fashioned flowers in hisgrandmother's garden and enraged at the
garishness of some modern flower beds;
he leads us in solemnity to the churchyard
and cemetery, in a hurry to the railway
station and in delight to the water-lily
pond, and invites us to rest awhile in the
nookeries of the home grounds. From
first to last he is entertaining and never
tiresome. But we wish Mr. Parsons had
condensed his text enough to give us more
plain, pointed, practical instruction; we
wish to know not only what to do but
how to do it. We hunger for information
about how to lay out small gardens and
pray for a series of simple working plans,
and would far rather have select brief
lists of plants for particular purposes
than wade through a bewildering multi-
tude.A COPY of the proceedings of the six-
teenth annual meeting of the American
Association of Nurserymen has been re-
ceived. It contains all the essays read at
the Minneapolis meeting and very full
reports of other matters considered and
discussed. No nurseryman can afford to
be without this report, containing as it
does so much of direct financial value to
everyone in the trade. The report can be
secured by sending the membership fee of
\$2 to the secretary, Mr. Chas. A. Green,
Rochester, N. Y.MESSRS. E. HALL & SON, Clyde, O.,
send us a photograph of a plateful of hail-
stones that fell at Clyde June 3. As shown
in the photo the stones average over one-
half inch in diameter, and Mr. Hall
writes that the photo shows them only
one-fourth actual size. Also that the
largest stones were not selected, but that
the lot shown were scooped up out of the
gutters of one of their greenhouses with-
out sorting. We should not like to be
exposed to a fall of such chunks of ice as
that.OUR ANNUAL convention supplement
which will be published with our issue of
August 13 will contain a sketch map of
the city of Toronto on which will be
prominently indicated the Convention
Hall, hotels at which rates have been
secured, and many other items of immedi-
ate interest to the visiting members.
Advertisements for the supplement will
be received at usual rates.CONSIDERABLE interest is being mani-
fested in the proposed meeting of mem-
bers of the various Florists' Clubs at
Toronto during the convention. Undoubt-
edly much good will result from such a
meeting, and every club should take
steps to be represented by duly accredited
delegates, with instructions regarding
any special subject it desires to have
discussed.PARLOR B. QUEEN'S HOTEL, will be
the headquarters of the AMERICAN Florist
at the Toronto convention.PLEASE SEND us a report of your spring
plant trade as compared with past
seasons.**NOTICE**
— OF —
Stockholders' Meeting.

CHICAGO, July 18, 1891.

The American Florist Company:

You are hereby notified that the annual meet-
ing of the Stockholders of the American Florist
Company will be held in Parlor B, Queen's Hotel,
Toronto, Ont., Tuesday, August 19, 1891, at 10
o'clock p. m., for the purpose of electing directors
and officers for the ensuing term, and for the
transaction of such other business as may come
before the meeting.J. C. VAUGHAN, Pres.
G. L. GRANT, Sec'y.

Be Good Trade.

AM. SEED TRADE ASSOCIATION.

F. DARTMOUTH, Lawrence, Kan., president; A. L. DUNN, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Sutherland, chairman membership committee, Wethersfield, Conn.

FRENCH BULBS, except freesias, which are scarcer, are coming in earlier than usual this year.

THE PEA CROP.—Extra earlies are said to be about two-thirds of a full crop; American Wonders somewhat better than that.

THE HIGGNUM MANUFACTURING CORPORATION, of Higganum, Conn., manufacturers of agricultural implements, have assigned.

REPORTS FROM NEBRASKA state that heavy rains and cool weather have put crops back so that they are about two weeks behind. Vine seeds were hurt more than corn.

Principal Toronto Hotels.

NAME.	CAPACITY.	RATE PER DAY.
Queens Hotel, Headquarters, 75 to 92 Front St.	300	\$3.00 to \$4.00
Rossall Hotel, King and York Sts.	250	3.00 to 4.00
Walker House, Front and York Sts.	250	2.00 to 2.50
Palmer House, King and York Sts.	250	2.00 to 2.00
Arlington Hotel, King and John Sts.	200	3.00 to 4.00
St. James Hotel, King and York St. (opp. station)	50	1.50
Albion Hotel, Market Square.	300	1.00
Ellis House, Church and Shuter Sts.	150	2.00
Hotel Metropole, King and York Sts.	75	2.00
Avondale Hotel, Simcoe and Wellington.	50	1.50
Richardson House, King and Spadina.	100	1.50
International Hotel, Front and Simcoe.	200	1.50
Black Horse Hotel, Front and George.	125	1.00
Russell House, 215 Yonge St.	50	1.50
Power House, King and Spadina.	50	1.50
Schiller House, 120 Adelaide St. E.	50	1.00
Lakerview Hotel, Parliament and Winchester.	75	1.50
Keachie's Hotel, 30 King St. W.	50	(European)
Empress, Yonge and Gould.	100	1.00 to 1.50

The majority of the above hotels are in the business portion of the city, the center of which is about one and a half miles from the convention hall in the Horticultural Gardens. Street cars pass the doors of all of them, making communication between hotel and hall quite easy.

Members wishing to secure accommodation before hand will do well to communicate early with Mr. J. H. Dunlop, 1 McKenzie avenue, Toronto, Ont.

A FLORIST in a western city is reported to have been so busy lately that it was only with difficulty he found time to keep an engagement with an attractive young lady and a minister. We wish the couple joy, but fear for the worst.

JUST BEAR in mind that the AMERICAN FLORIST goes to everyone in the trade and when you advertise in its columns you reach every florist in America.

SEND IN YOUR ad. for our convention supplement early, so we will have time to get it up in our best style.

WAS YOUR spring plant trade larger or smaller than last year? Please send us a report.

SITUATIONS, WANTS, FORSALE.

PANSIES.

PANSIES THAT ARE UP. No need to worry over getting the seed to come up, it is up and ready to plant when I send them.

It is not only the plants that are up, the strain is up also; up to, and a goodly number of my customers say, above any strain in the market. The price is down, considering the quality of the strain, seed as good would cost you about as much per 1000 plants. My price is \$5.00 per 1000, or in lots of 2,500 and over, \$4.50 per 1000.

GARDINER'S SUPERB CHINESE PRIMULAS.

The Chinese Primula has long been a favorite floral flower, and it has never been seen in greater perfection than now—some very rare and remarkable varieties having been produced within the past few years. Our strain is from a celebrated European specialist, and is acknowledged to be superior to all other strains now on the market. The many flattering testimonials we have received warrant us in recommending this strain very highly.

Single and Double Thick Glass.

In reply to Mr. Alexander Murdoch, who asks concerning the relative resistance of single and double thick glass against hailstones, I would say: The breakage of glass in such cases depends a great deal upon the velocity of the wind, the consistency of the hailstones and the angle at which it strikes the glass. Where both kinds of glass have been exposed in the same storm is the only way to ascertain their relative resistance. In two cases the F. H. A. has paid small losses on single thick where no double thick was broken. In two cases payment has been made for double and single thick glass broken in the same place by the same storm, the average proportion of loss being about one-third greater on the single than on the double thick. In the recent storm at Oconomowoc, Wis., the percentage of breakage was nearly as large on J. T. Bartlett's double thick glass, as upon Herman Bucher's single thick, but in this case the hail might have been more severe where Mr. Bartlett was located. These instances, together with others where only one kind of glass was exposed, leads us to believe that double thick glass will resist hail where the velocity of the wind is moderate and the hailstone not too large or icy, that in an average hail storm the percentage of loss will be at least one-third greater on single thick than on double thick glass, and when it comes to storms where blocks of ice are accompanied by violent wind it doesn't make much difference whether you have double thick glass or not. The F. H. A. recognizes that the risk is less on double thick glass by charging less and paying more in case of breakage, and during the four years of its operation nothing has occurred to make a change necessary. Personally my opinion is that large, double thick glass is much the cheapest in the end, and less likely to break from the effects of frost or hail. JOHN G. ESSLER.

Wrinkles in Construction.

In the new greenhouses erected by E. G. Hill & Co., Richmond, Ind., wrought iron pipe was used for purlins as well as for the upright supports. The purlins were fastened to the sash bars by strips of metal as illustrated in the FLORIST some time since. But a new use has been found for this purlin, and it seems strange that no one has happened to think of it before. The pipe purlin is utilized to carry the water to every part of the house. This not only saves the expense of another pipe to carry the water, but being up close under the roof the water that stands in the length of pipe is warmed sufficiently to take the chill off of it and this is an advantage at times. The majority of the upright supports are attached to the purlin by T's which have been recamed out so that the purlin passes freely through them and pipes of full length can be used without cutting, though the supports are only eight feet apart. But at stated intervals a regular pipe connection is made which carries the water down the pipe support and to which a water cock is attached.

Another new departure in Messrs. Hill & Co.'s new houses is the use of sheet steel siding for weather boarding. This is said to be about as cheap as ordinary wooden siding and certainly much more indestructible.

Butted Glass.

A few years ago I built a house for general use, 17x90. I had heard something about butted glass that I was tempted to try it in this house. As I am one who is always willing to take advice from his elders, I was easily induced to try a little sand on the liquid putty before it became thoroughly dry. It was never satisfactory. It always leaked more or less. It was a standing joke with the men to tell each other to carry an umbrella in this house during a rainstorm. Now, as I am about to reglaze this house, I find that my sand and liquid putty have united in making a cement that is harder than the conscience of a pawnbroker. The breakage of glass, too, in taking out the panes is greater, in my estimation, than the old way. This is of no value to men of experience, as they are competent to judge for themselves; but to the "young and inexperienced," like myself, I would say, "If you are in doubt about it, don't do it."

CHAS. E. HAY.

"Heavy-Shotted Insinuations."

PUBLISHERS, AM. FLORIST: Should you have any more advs. for positions mailed you, with my initials and address attached, as on a recent occasion, you will oblige me by making it read in my care, and not as before. In the case noted it is stupidly made to appear that I am not only **SOME** and **INDUSTRIOUS**, but that I want work. These heavy-shotted insinuations may strike near the mark, but don't exactly hit the bull's eye. Yours truly,

COL. D. D. L. F.

Two-Inch Pipe.

Will some reader of the FLORIST who has had experience please tell me what number of feet of 2-inch pipe would be required to heat a house that is now heated by 1,200 feet of 4-inch pipe? I would also like to know the cost per foot of the plain iron pipe—not galvanized.

Will some reader also state the average price of crude petroleum for fuel purposes.

NEW JERSEY.

OUR CONVENTION SUPPLEMENT will be published with the issue of August 13, and the map and directions it will contain will, we believe, be of considerable value to those attending the meeting at Toronto. Exhibitors wishing to call special attention to their exhibits will find the supplement a very effective medium.

WILL YOU be with us at Toronto? You will miss it if you stay away.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/2 inch	2,000	250 lbs.
2 "	2,400	300 "
2 1/2 "	1,750	250 "
3 "	1,450	250 "
3 1/2 "	1,250	250 "
4 "	800	350 "
4 1/2 "	600	350 "

It will be seen at a glance, that our pots are one third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **SEND FOR PRICES.**

THIRD DAY—Morning Session, 10 o'clock.

Election of officers.

ESSAY—Credits, H. B. BEATTY, Oil City, Pa.
ESSAY—Store Trade, Wm. H. Long, Boston, Mass.

ESSAY—Winter Flowering Plants Suitable for Decoration.

THIRD DAY—Evening Session, 7:30 o'clock.

ESSAY—Carnations to Date, FRED DORNER, Lafayette, Ind.

Question Box. (See below.)

Final Committee Reports.

QUESTION BOX.

The following subjects for the Question Box have been already sent in, and together with those placed in the box during the sessions will be assigned to gentlemen competent to reply to them on the evenings of the first and third day. The questions will be grouped as nearly as possible, so that subjects of general

interest to the trade will be assigned to the first evening. Strictly cultural questions and those relating to mechanical appliances in greenhouses will be assigned to the third evening. Five minutes will be allowed for each reply.

SUBJECTS.

Should Florists Charge for Boxing and Packing?

How Can We Best Profit by the Demand at special seasons?

Is Miscellaneous Advertising in the Retail trade Advisable?

How to Successfully Manage Floral Exhibitions?

What Are the Best Twenty Foliage Plants and the Best Twenty Flowering Plants for Decorative Gardening?

What are the Best Twelve Companions to India Rubbers and Lantanas for House Decoration?

New Ideas in Greenhouse Construction and Heating?

Best Method of Tempering Hydrant Water?

Best Method of Distributing Liquid Manure?

Growing Roses for Summer Use?

The Best Varieties of Gladioli for Forcing?

How to Master the Green Fly?

How to Mend a Rubber Hose?

FRIDAY, AUG. 21, 1891.

FOURTH DAY.

An excursion on Lake Ontario by invitation of the Gardeners' and Florists' Club of Toronto.

Names and Addresses of Chairmen of Committees of Toronto Gardeners' and Florists' Club for S. A. F. Convention, August, 1891.

Reception Committee—Mr. John Chambers, Superintendent Parks and Gardens, St. Lawrence's Hall, Toronto, Ont.

Trade Exhibit Committee—Mr. Thomas Manton, florist, Eglinton, Ont.

Entertainment Committee—Mr. W. J. Laing, 401 Huron street, Toronto, Ont.

Ladies' Committee—Mrs. Fraser, florist, Spadina Crescent, Toronto, Ont.

Introduction Committee—Mr. F. G. Foster, florist, Hamilton, Ont.

Decoration Committee—Mr. C. Arnold, florist, 521 Queen street, W., Toronto, Ont.

Finance Committee—Mr. J. H. Dunlop, florist, corner of Bloor street and McKenzie avenue, Toronto, Ont.

Printing and Badge Committee—Mr. S. E. Briggs, of the Steele Brothers Co., corner of Front and Jarvis streets, Toronto, Ont.

Bureau of Information—Mr. George Park, care Sir D. S. McPherson's Chestnut Park, Toronto, Ont.

Will you be with us at Toronto? You will miss it if you stay away.

"Listen to My Tale of Woe."

As a retailer, does it pay to try to maintain a high standard of work? This question has often occurred to me. Our business is not a very large one, to be sure, but it has been our constant aim to cater to the "very best" trade, and to fill every order to the best of our ability as to the selection and arrangement of flowers, making every effort to procure all the novelties at our command, and always paying particular attention to the quality of flowers which we buy, frequently paying a premium for same.

Very seldom are we successful in getting an order from a stranger, if he is "gunning" for estimates, and such cases are generally governed by the amount of work that the florist promises for the least money. For instance, take the 24-inch "Gates-A-Jar." One florist will estimate \$8, another will say \$15; possibly the latter is cheaper, as he would not allow the \$8 one to go out of his place, consequently the \$8 man makes his little profit, and the \$15 man has the reputation of being too high priced. If the \$8 "Gates" pleases (which it may), the florist has possibly made a number of new customers by the operation, and the \$15 man has nothing to stand on, as far as that order is concerned, but his dignity, "which won't buy the baby a frock."

The other day one of the young men in our store was making a cheap bouquet for a man who was waiting for it, who, by the way, was suggesting what to put in it. I thought the thing was very ugly. At this moment a lady customer came in, one that we had served for a number of years, always taking the greatest care in filling her orders. To my surprise she thought that the bouquet which the young man was making (and I felt secret protest) was beautiful, and wanted one just like it. If we had ever sent flowers to her in that shape we would have thought it justifiable for her to have withdrawn her patronage.

Frequently in addition to the flowers bought we will put several sprays of maidenhair fern, smilax or some other green in the box. I was surprised one day by having a lady say to me, after having left an order, "Please do not put any ferns in. I would rather have extra flowers." I was entirely at a loss to know what she meant, and said, "Beg pardon, madame, I do not understand." She said, "I bought some flowers here the other day, and you put some maidenhair fern in, and I thought that if that was your practice I would rather have that amount in flowers." That, we think, is "looking a gift horse plumb in the mouth." Much like another case which happened more than once. A very particular customer orders a dozen roses; the salesman counts out thirteen, when the customer will point at one which does not come up to the standard. The salesman, counting them over carefully, will lay this one aside, and say, "I had put thirteen in." I have then heard the customer say, "Oh, all right, put it in," and would feel quite injured if it were not done. Then again, somebody wants as large a bouquet or box of flowers as can be had for little money. You use your best judgment, and after being as generous as possible they will say, "Can't you put some roses in?" Another wants 10 or 25 cents' worth of flowers, and after trying to please you hear, "Oh, won't you put some smilax in?" and nothing less than a quarter of a yard will satisfy them. If you are generous with these people, and it surely is your desire to

please, your generosity is oftentimes abused, as they expect quite as much, if not more, the next time they come, and if they do not get quite so much they are displeased and you lose a hoped-for customer.

No one that has not stood behind a counter, taken orders, made contracts, ordered and bought flowers, received and arranged them, knows what the retail florist has to contend with. For instance, we know that a certain grower has a crop of flowers (say hybrids). A customer comes in, and you see an opportunity to use some of these flowers to advantage; you take an order several days in advance, feeling very sure that the crop will hold out that length of time. What happens? Several of your competitors have thought the same thing, and where you had hoped to get all that you wanted, a short cutting has to be divided among a number; dull or cold weather is the excuse this, or that was not done, and you are obliged to "hustle."

Now, as to wild flowers and fruit blossoms: Everybody that has been through the "mill" knows how carefully these orders have to be taken; a spring shower will upset all of your plans; the flowers have to be caught "on the wing," or they are useless.

As a florist take two dozen buttercups, put them in a light blue vase, place that vase on a little gold and white table, with a light blue scarf thrown across the top of table, put that table in an appropriate place as to position in the room, with proper background, and if you send in an itemized bill (as is often necessary) for two dozen buttercups at twenty-five cents per dozen, fifty cents, in many cases you will be confronted with the statement, that they are "sorry" that they did not get their man good and early, and that of buttercups. Charge these people a fair price for the idea and execution, and you would have few charges to make them in the future. No, there is very little encouragement for such work, and in many cases this is why the florist would suggest, say a dozen roses for the same vase, and in most cases the customer would rather pay much more.

There is no business that is more exacting as to time; the retail florist is constantly on the alert for trains, weddings, funerals, etc., while the grower often thinks it a hardship if he is obliged to make an earlier train than usual.

Then at Christmas, Easter, or on any other day when you expect to sell a great many flowers, you are not only obliged to take more than you want a number of days or weeks before, but you are obliged to pay exorbitant prices on the day, or really the day before; you are obliged to work all night at these times and consequently have to use the greatest care in selecting the flowers that they may look well the next day. A few of the growers have "salted" their flowers for several days previous, and when this is done, one hundred roses received, does not mean eight dozen salable roses to the retail dealer. I am glad to say, however, that many of the growers are commencing to realize that it is not advisable to put the screws on too heavy at such times.

Another feature that the retailer is obliged to contend with is, the poor packing of some of the growers; many of them handle such flowers as violets and carnations, as if they were potatoes, but the retailer sees the consequences, and knows that the small petals of the purple violet feels a bruise quite as much as some

of the other flowers that show it a little more quickly. A RETAILER.

Vase of Hardy Tree and Shrub Bloom.

A glance at this vase shows how easy it is to get up a simple and effective flower decoration when hardy trees and shrubs are in bloom. Here are shown only three kinds of flowers, namely, spring blooming tamarisk (Tamarix Africana), wild cherry (Prunus serotina), and hybrid magnolia (M. Soulangeana), but a hundred others are just as available.

A word about tamarisk shrubs: The catalogues record a good many names; even the "Dictionary of Gardening" has several, and we have got and tried plants of most every name given, but among them all I fail to recognize more than two species, namely, T. Africana, the spring blooming one, and T. Chinesis, which has glaucous foliage and blooms in August and September.

The Africana tamarix forms a tall, willow-like shrub, and its last year's growth is feathered all along with racemes of very small pink flowers that appear before the foliage and are in their finest condition with us about May 20-25. After the plants have done blooming we cut them hard back to keep them stocky and shapely and then let them grow at will for a year. As the Chinese tamarix blooms on the current season's wood and never on the old wood, we prune it in winter and never after growth begins in spring.

These tamarisks strike from cuttings of the ripe or old wood as freely as do willows. And in either case we always save the tamarisk prunings for stakes, for the growths are long, very clean and even in size, and the wood, unlike one-year-old shoots of most anything else, is hard, wiry and lasting when cut.

The wild cherry is abundant everywhere, and is in its finest bloom about May 25. The European bird cherry (Prunus Padus) is much like our wild cherry, but blooms fully a fortnight earlier, being at its best with us about May 10; and there is a double flowering variety of this that for cut flowers is more showy than the typical form.

The magnolia belongs to the obovata section; that is, the class that blooms in April before the leaves appear, but for some reason or other, probably its hybrid origin, this one (M. Soulangeana), which is at its best with us about April 25, continues to bloom more or less after the leaves appear till June. And this is why we find it—flowers and leaves as well—associated with the tamarisk and wild cherry in the vase.

One of the recent new things among trees and shrubs is a weeping form of the wild cherry. W. F.

Hardy Primulas.

The really desirable primulas hardy in this country are very few in number. There are two species, however, whose merit cannot be gainsaid, namely, P. Japonica and P. Sieboldii. The former is a strikingly handsome plant. It was introduced to English gardens from Japan some twenty years ago, and produced quite a sensation in horticultural circles at that time. Singularly enough, the plant was first described by the late Dr. Asa Gray, from material collected by Mr. Charles Wright, a botanist of Connecticut, now also deceased. It is of bold habit, with spatulate, toothed, pale

VASE OF HARDY TREE AND SHRUB BLOOM.

green leaves from six to nine inches long and from two to three inches broad at their widest part. The flower stem attains a height of from eighteen to twenty-four inches, and bears several whorls of dark purple flowers over an inch in diameter. There are some varieties producing white, pink and lilac-colored blossoms. *P. Japonica* flowers very freely in

this country during May and June, when given a favorable situation, and ripens seed in the greatest abundance.

P. Sieboldii is a still more beautiful species, and sometimes called *P. cortusoides amana*, but more generally known under the former name. If a variety of *P. cortusoides* it is certainly a very distinct one. The fact, moreover, that *P.*

cortusoides is a Siberian species, and *P. Sieboldii* a native of Japan—whence it was introduced in 1865—tends to weaken their supposed affinity. The leaves are oval or oblong, coarsely toothed, pale green, and four or five inches long, with petioles of similar length. The scape is about twelve inches high, bearing in a cluster at the top from six to a dozen

bright, crimson, white-eyed flowers two inches across. Four forms of this plant were introduced originally, the others differing from the type in their flowers being white, creamy white, and lilac. A large number of splendid new varieties have been raised from these by growers in England and in France. P. Sieboldii does not produce seeds very profusely, and it is therefore a matter of some difficulty to obtain new varieties. But, on the other hand, P. Japonica seeds quite freely, and yet new varieties of that species are extremely shy in making their appearance. Perhaps the latter plant has not been given the same attention in this respect as P. Sieboldii, which blooms earlier by a week or two.

These primulas have a strong dislike to anything approaching stagnant moisture about the roots, and thrive most satisfactorily in slightly elevated and partially shaded parts of the rock garden. Their ideal soil is a mixture of fibrous loam, leaf mould, old manure, and coarse sand in equal parts. They should be planted in large masses to secure the best effect, devoting, when practicable, but one variety to a single mass. A little watering with withered leaves, applied late in autumn, will afford ample protection to the plants during winter, and it should be cleared away before the growth has had a chance to push up through it in the spring.

P. Sieboldii may be readily propagated by dividing the little rhizomous roots early in spring before growth commences and planting them in a cold frame, where they may be protected from frost, using rich, sandy soil. Allow them to remain in the frame until they become strong plants, when they may be transferred to the open garden. P. Japonica can be increased in the same way, but the seeds afford a better means of propagating this species. These should be sown immediately after gathering, in pans filled to within half an inch of the rim with good soil, pressed so as to leave a firm and level surface. Sow the seeds evenly, cover lightly with fine, sandy soil, and again smooth the top by gentle pressure. Now immerse the pans in water, holding them just below its surface, until the soil becomes thoroughly saturated, when they may be placed in a cold frame. Keep them close and shaded until germination takes place, when air may be admitted, gradually increasing in volume, and the shading withdrawn as the plants strengthen. Transplant in a cold frame containing suitable soil when large enough to handle conveniently, and they will with ordinary carefulness become good-sized plants before winter. They are still tender, however, and will require protection until the following spring, when they may be removed to their final quarters. Seeds of P. Sieboldii, when obtainable, should be treated in the same manner.

M. BARKER.

Cambridge, Mass.

Gloxinias.

T. J. B. writes: "My gloxinias have been at rest for six or eight weeks, the pots being turned on their sides to keep the 'roots' dry, but I see the plants are again starting to grow. Should I now bring them to the light and encourage them to grow?"

No. Don't try to get two crops of growth and two crops of flowers in one year from gloxinias; if you do the probabilities are that the second growth will be unsatisfactory and the crop of blossoms quite disappointing. Better give the "roots" a long rest and discourage their

tendency to grow by every legitimate means before next winter or early spring. Gloxinias starting to grow so soon as yours are doing is nothing unusual, but discourage them. If they have grown so much, however, as to shrivel the "bulbs" give them a little water now and again, but on such a stinted scale that while it may serve to keep the "bulbs" plump it will not excite much leaf growth. W. F.

Orchid Notes.

BY WM. FALCONER.

CATTLEYA GASKELLIANA.—We have Cattleya Mossiae in early summer, large, showy and of a good many tints, and now when the Mossies are about past in comes this, one of the loveliest of all orchids. It is exceedingly free blooming, and its blossoms are very large and delightfully fragrant and they have good keeping qualities. We have also the pure white flowered variety, with a saddle shaped yellow marking on lip—in bloom, and it grows and blossoms as freely as the rose purple forms and is as fragrant.

CATTLEYA ELBORAL and its varieties come from Elbor, and they bloom all summer long. The flowers are white, suffused with rose or purplish rose, and the lip has a yellow throat and magenta or deep violet purple marking near the front. But the flowers have not got the bold, open appearance of many others of our fine cattleys.

CATTLEYA SUPERBA is also a summer blooming orchid from Brazil. It is only a medium sized species, but it has beautiful, deep, rose purple flowers, with magenta crimson lip. A desirable plant, but not so easy to grow satisfactorily as is C. Trianae or C. Mossiae.

DENDROBILUM (now called Platyclipsis) filiforme, the little golden chain orchid, a charming species from the Philippines, is also in bloom. The plants are naturally of small proportion, but they are profuse blooming, the flower stems are erect, long and wiry, with the 6 to 9-inch long raceme of flowers which terminate each, drooping, limp and perpendicular. It is a choice and little gem, and easily grown.

EPIDENDRUM NEMORALE MAJIS is also a very beautiful summer blooming orchid. It has long, stout, wiry, arching spikes, with a panicle cluster of large, rose-lilac flowers at the end of each. It is a Mexican orchid, and lasts in bloom a long time.

Vase of Hardy Flowers and Foliage.

Here we have a comely combination of hardy plants—flowers and foliage. The fleecy pink wanders of the African tamarisk, the white, fragrant Florentine iris, and young, leafy sprays of the crimson leaved Japanese maple.

The tamarisk is in fine bloom near the end of May and the iris at the same time. This iris is one of the handsomest and boldest of early blooming kinds and perfectly hardy; its white flowers have a tinge of blue in them, and they are fragrant. Indeed, the rhizomes of this plant are used in the manufacture of some kinds of perfumery. It is well worth growing for cutting, but like most all other irises

its blossoms last for only one day. And in the way of irises don't miss I. pallida, blue, and one of the largest and finest of all as well as the thiftest of the rhizomatous sorts. But the ephemeral nature of iris blossoms will always be a barrier to their popularity as cut flowers except for home use or immediate want.

The foliage of the Japanese maples, however, is very suggestive. Leafy sprays of these elegant maples have a fine effect when used with cut flowers and they are much esteemed by refined people. These maples—the polymorphous, not the Japonica section—are shrubs only with us, but they are of a dense branching nature and very leafy, and according to variety the foliage is large or small, broad or narrow, simply palmate or exceedingly finely cut, and in color may be plain green or clear crimson or variegated, and the coloring always is deepest in spring. The typical kind is raised from seed, and the varieties are "worked" or all may be easily raised from layers. The Japanese maples are among the loveliest hardy shrubs we have got, and root well and transplant well; indeed, I never hesitate to transplant large specimens in full leaf in summer short distances, providing I can carry the full ball of earth and roots and give them a barrel of water after planting them. But while young plants are very beautiful, old specimens take the Japanese "dieback" and whole limbs will die out here and there all among the plants in summer. But don't let this deter you from planting Japanese maples. We can enjoy beauty and refinement undisturbed for a dozen years, may be twenty. W. F.

Floriculture in Central Texas.

We are having now, here in central Texas, a very hot and dry time. It is very hard work to keep plants alive out of doors. The temperature in the houses with all the ventilators open, runs each day from 95° to 106°, one day to 108° in the shade. Geraniums, feverfews, dahlias, colous, and even roses are dying with the heat, although watered every evening. From the middle of June to the end of August the sun burns up many of our flowers, and takes the color out of foliage plants.

Alternantheras are a dead green, acalyphas are without variegation, achyrantes are rusty and shriveled, crotons have all died—out doors. Cannas and other tuberous rooted plants can only just hold their own against the heat.

The plants that almost defy the hot sun here are the following: Abutilons, hibiscus, heliotropes, lantanas, petunias, and vincas.

The Cyperus alternifolius makes a fine plant outside, equal in effect to a palm. I had a lantana that stood through the winter of '89 and '90 out doors, but it was killed to the ground last year. It made a plant 4 feet high and 16 feet by 12 feet across. I also had a double white petunia that bore over 2,000 flowers from April 15 to November 15. It was planted out from a 3-inch pot on the 15th of April, and in November measured over 4 feet across.

It was cut down by frost about the 10th of December, but bloomed again in January, when I took about 100 cuttings from it. It was finally killed by a frost in March, which was the worst frost of all last winter.

We get our best flowers out doors here from the 1st of September to the middle or end of November. Last fall I cut roses from Her Majesty, Magna Charta, Bar-

VASE OF HARDY FLOWERS AND FOLIAGE.

ness Rothschild, Paul Neyron, and M. P. Wilder from $4\frac{1}{2}$ to 6 inches in diameter, and from the teas flowers from $2\frac{1}{2}$ to $4\frac{1}{2}$ inches, and these by hundreds, perfect in every way.

I am trying to work up a stock of plants adapted to our hot, dry climate. As we are so often left when we try those plants that are said to stand the hot sun of the northern and middle states.

People from the north often come to me for the plants they have been used to at home. Some want pansies now in July, the last pansy having died out with us a month ago. Others want to plant out rhododendrons or hardy azaleas, things that never lived through the first summer after planting here.

I read the notes in the FLORIST on the tuberous begonias. I used to grow them

at home in England, but fail with them here. I have tried them both in doors and out, in the sun and in the shade. They would grow on till June, and then they would die out in a few days, so I have had to give them up. If the readers of the FLORIST can name any plants that will do well for bedding or planting out in central Texas I would be glad to hear from them through your paper. Agaves,

vireus, caeli and the like, of course, are well known here. WM. CROWE.
Corsicana, Texas.

Rooting Cuttings in Summer.

Between the 21st and 25th of May I put 4,000 Lamborn cuttings in a sand bed out of doors, partly shaded by shrubbery and wholly by muslin covers, through which most of the water was given. I was surprised to find that I could hold the temperature down to 74° in the sand when the atmosphere was 85°.

The cuttings were of very good and in the language of one of my florist friends, not "polluted by steel." They were kept moderately wet, and covered during the greater part of the day for four weeks, when the covers were removed. At the end of seven weeks I took out a little over 1,300 plants. Not very heavy, you may say, but the experiment was not expensive, and utilized material that would otherwise have been wasted. I think it well worth further trial. I would like to hear from anyone else who has tried rooting carnation cuttings in midsummer. EDWARD SWAYNE.

Kennett Square, Pa.

Clerodendron Thomsonae.

This is a greenhouse vine of great merit and we can have it in bloom any time of the year we choose. By growing it in pots, tubs or boxes, and resting it in water by keeping it pretty dry, then pruning it in towards spring and a little while after, giving it more water and heat, we can have it in fine bloom in summer. Or by resting and pruning now we can have it in bloom in winter. Summer or cool-grown flowers last fairly well when cut, but the winter flowers, especially when young, are apt to wilt badly when cut; to prevent this wilting after cutting the flowers I cut out most of the foliage from among the panicles. But freedom in the greenhouse in summer what a splendid show this *Clerodendron* makes! Cut it in, twine the old stems around a cylinder-like trellis or some stakes when housing other plants begins, and remove it to some convenient corner where it will take up little room and won't be much in the way, to stay there over winter. Of course if you grow it for flowers in the winter it has got to have good house room. It may be propagated from root cuttings or cuttings of the young wood, or branches may be heeled into the ground to root as layers, and seedlings frequently spring up on the ground about where the old plants have bloomed and seeded. W. F.

Summer Flowers for Cutting.

In the paper upon this subject in your July 16 issue *Achillea ptarmica* fl. pl. is highly recommended. The newer variety, "the Pearl," is far better and those who try it will have no further use for the old variety. *Anthemis tinctoria* I think combines more good points than any other yellow flower. It is perfectly hardy (it is a perennial), commences to flower early

and continues to produce a great abundance of flowers on long stems until quite heavy frosts come in the fall; both rays and disk being of a brilliant golden yellow and daisy-like in form. Of the *Helianthus*, *H. latifolius* is the best single flowered variety we have ever grown. It continues in bloom longer than most others, has very long stems and the color is good. Few flowers are more showy than the striped French marigold and its other points are good. WM. F. BASSETT.

Hammonton, N. J.

Acalyphas

Amongst the large number of plants employed in bedding out, none are more effective and satisfactory than the acalyphas. Their splendid and uncommon appearance, their brilliant and dressy effect, recommends them to all lovers of beautiful foliage as desirable and exceedingly showy bedding plants. It has been generally and erroneously supposed that they were tender and unfit for outdoor planting, which is quite a mistake; they are a good deal more hardy than coleus. During the latter part of May we had a protracted season of cold nights, when the thermometer touched 33°. Coleus suffered severely, especially Golden Beder, which was almost entirely denuded of its leaves. The acalyphas, on the contrary, did not suffer the least harm, and are yet retaining the leaves that were on them when planted out.

Their propagation is almost as simple and easy as that of coleus; the young tips or hardwood can be propagated with equal facility in ordinary bottom heat, the young tips growing more quickly into good plants. This is a plant that only requires a good introduction to the public to command large sales, when seen in good health and color, which can be easily accomplished by growing them in a sunny house and in a soil and temperature that will grow coleus. When seen in this condition they cannot fail to be admired by everyone. Mealy bug is the only insect enemy that has troubled them with me so far, and they are not nearly so subject to it as coleus and much easier kept clean.

A. Macleana, A. tricolor, and A. marginata are the best that have come under my notice. A. marginata has pale green leaves deeply margined with pink, but is less desirable than the two preceding on account of its habit, which is more straggling than the others.

JOHN DALLAS.

[The acalyphas are now used for bedding work at Lincoln Park, Chicago, and are very effective.—Ed.]

Geraniums—Cost of Production.

Very few florists who grow a general collection of plants can tell exactly what any particular class of plants cost him to grow. About the worst paid plants that anyone can grow are geraniums.

The writer's practice has been to put in cuttings in August and September, when material is plentiful; when these cuttings are rooted they are not potted, but are set in benches or in boxes (such as we use for bulbs, about three inches deep and of any size convenient to handle) thus they are condensed as much as possible and are kept on a high bench near the light until the last of November, and some as late as the first week in December, by which time chrysanthemums and cosmos are cleaned out, admitting of other changes, which gives more room. The geraniums are then potted, first in 3-inch and finally

into 4-inch pots, in which latter they remain till sold in spring.

I don't say this is the best way to grow geraniums, far from it, but it is the cheapest way I have found, to produce plants that have to be sold cheap. They are a staple article, and every florist who does a retail business is obliged to have them. As for profit, there is none in them, either at wholesale or retail prices; but they help to sell other plants, as every salesman knows.

A house 100 feet long, with two benches, each four feet wide, will hold 3,200 plants in 4-inch pots, allowing four plants to the square foot. It is easy to figure up the sum of the value at whatever price they sell at. I know there are men who will put from four to five thousand plants on the above mentioned space, but everyone knows the effect of such crowding is not profitable in the end. The above, of course, has reference only to the main crop; choice or scarce kinds are propagated all through the winter.

By way of comparison let us suppose that a crop of rose plants occupy the house instead of geraniums. The same space that will hold three thousand geraniums will accommodate, in the same sized pots, 5,000 roses. They can be set so much closer together without injuring each other. Besides, the cuttings of roses can be rooted, potted, nursed and potted again in half the time that the geraniums require from the start. The value of geraniums at 8 cents is \$250, while the roses at 10 cents are worth \$500, supposing all are sold in each case. Of course, it can be easily understood that neither of the crops referred to will occupy all of the house during the whole period of their growth; other crops can be grown in part of the same house for at least a portion of the time.

Other crops might be cited by way of comparison; for instance, carnations, for cut flowers will give about the same returns as the roses, but the carnations occupy the benches nine or ten months, or so long that no other crop can be grown in the same house within the year.

Other men may give clearer views and more definite statements; I have just jotted down my thoughts on the subject after reading the note in the *FLORIST* of 9th inst. E. FRYER.

[We are much obliged to our correspondent for his thoughts upon this important subject. We trust that they will set others to thinking upon the matter and that as a result we shall have their views also. There is no more important matter before the trade to-day. Prices have been cut to such an extent that actual figures only will show when bottom has been touched and a crop nets a loss instead of a profit. The only remedy for reckless cutting of prices is to educate the mass of growers to a realizing sense of the position they stand in, and to show them where the line of demarcation between a profit and a loss stands, that they may know when they have cut below it. It is for the more enlightened to educate the ignorant and unthinking, not for the benefit of the latter alone, but for the general good. The lowest price makes the market, and the ignorance of one operates against all the rest.—En.]

Allamandas in Summer.

Many of our plant houses in summer are pretty well emptied of their usual occupants, for instance the carnations are in the fields, the callas at rest, the azaleas plunged out of doors, and so on,

and this is just the time to enjoy the allamandas in all their revelry. Have command over their roots by growing them in boxes, tubs or bricked-in pits, so as to be able to keep them partly dry and inactive in winter, and with abundance of water and nourishing fertilizer in summer let them spread and run with all their might and bloom in all their golden splendor. If in tubs or boxes they can be kept in out of the way parts of the houses in winter and in summer brought forth to better quarters. And hose them well to keep them clean. Allamanda Schottii is as good as any. And in California I am told they make magnificent outdoor plants.

W. F.

HILL'S GREENHOUSE BENCH

Greenhouse Benches.

We present herewith engravings of two methods of constructing substantial greenhouse benches.

The first shows the style of bench used by E. G. Hill & Co. in their new range of houses at Richmond, Ind. The rails used were light T rails such as are used on some street car lines. The rails brought by Mr. Hill had been used on some line that had cause to change to another style of rail, and were purchased at a low price; they answered the purpose just as well as new rails. As shown in the illustration, the cross pieces are of the same sized rail only placed rigid side up, resting on the top of the front cedar post, and mortised into the other cedar post at the back. The three rails that run lengthwise are placed bottom side up, so as to allow a broad, flat surface for the slates or other bottom material to rest on. The rails are held in proper position by pieces of board cut so as to fit in the spaces between them. But it is necessary to hold them in place only long enough to get the slates or other bottom material in position. The cedar posts are sunk 18 inches in the ground and are placed 8 feet apart, but Mr. Hill thinks that they might just as well be 12 feet apart as 8. The side board is held in position by galvanized iron strips which pass through two slits in the board and clasp around the outside rail. These are placed 4 feet apart. This is the weakest point about this style of bench. The rest is as solid as a rock, and Mr. Hill confidently expects his benches to be just as solid 25 years hence as at present. The rails cost him 1 1/2 cents a foot, and while the first cost is very considerable, even after having been in use for many years a good share of the amount can be gotten out of them by disposing of them for the price of old iron. For the center benches the same system is followed, the rails being placed at a proper distance apart to suit the size of slate, etc., used.

The second illustration shows the style

of bench in some of the houses of Mr. R. J. Mendenhall, Minneapolis, Minn. Two pieces of large angle-iron, about 3x3 inches, run lengthwise of the house on brick piers set down about 8 feet apart, and for the bottom short boards are placed crosswise. The illustration makes the matter quite plain.

Principal Toronto Hotels.

NAME.	CAPACITY.	RATE PER DAY.
Queens Hotel, Headquarters, 75 to 92 Front St.	300	\$3.00 to \$4.00
Rossin House, King and York Sts.	250	3.00 to 4.00
Walker House, Front and York Sts.	230	2.00 to 2.50
Palmer House, King and York Sts.	250	2.00
Arlington Hotel, King and John Sts.	200	3.00 to 4.00
St. James Hotel, 15 York St. (opp. station)	50	1.50
Albion Hotel, Market Square.	300	1.00
Elliot House, Church and Shuter Sts.	150	2.00
Hotel Metropole, King and York Sts.	75	2.00
Avondale Hotel, Queen and Wellington.	50	1.50
Richardson House, King and Spadina.	100	1.50
International Hotel, Front and Simcoe.	200	1.50
Black Horse Hotel, Front and George.	125	1.00
Russell House, 215 Yonge St.	50	1.50
Power House, King and Spadina.	90	1.50
Schiller House, 120 Adelaide St. E.	50	1.00
Lakeview Hotel, Parliament and Winchester.	75	1.50
Keachie's Hotel, 30 King St. W.		(European)
Empress, Yonge and Gould.	100	1.00 to 1.50

The majority of the above hotels are in the business portion of the city, the center of which is about one and a half miles from the convention hall in the Horticultural Gardens. Street cars pass the doors of all of them, making communication between hotel and hall quite easy.

Members wishing to secure accommodation before hand will do well to communicate early with Mr. J. H. Dunlop, 1 McKenzie avenue, Toronto, Ont.

Philadelphia.

Business for this season of the year is fairly good. During the past week there has been considerable funeral work, and seashore and country orders have helped to use up the colored flowers.

Sweet peas are plenty and sell for 25 cents a hundred; carnations, \$1; roses, Perles and Nibels, are selling for \$2 and \$3 a hundred, while La France and Brides bring \$3 and \$4.

Mr. Charles F. Evans has been spending a part of his vacation in the neighborhood of Toronto, and speaks very highly of this city, and predicts a good time for those who will attend the convention.

Mr. Charles H. Fox has removed his establishment from the southeast to the northeast corner of Twenty-first and Columbia avenue. His new store is large and roomy, and presents a very attractive appearance.

Mr. George Craig is making extensive alterations at his store on Eleventh street, below Walnut. A large bulk window is being put in, which will be fitted up with inside sash and arranged to show oil cut flowers in the best possible manner. We understand that the bachelor button will be a corner all to themselves.

It is rumored that the "Crape pullers" have formed a sort of trust or combination. They have divided the city into three districts, up-town, down-town and middle; they are not to encroach on one another, and in this way many a car fare

will be saved, and in the absence of competition better prices obtained. One of the principal firms of the trust makes his tour every morning in a carriage, and generally succeeds in getting quite a lot of orders.

X.

Toronto.

The flower show held by the Toronto Electoral District Society the 22nd and 23rd insts. was a great success both as regards the quantity and quality of exhibits and attendance. Orchids and nepenthes figures to a considerable extent, a class of plants which in former years have been conspicuous mostly for the small number exhibited. Mr. John Chambers, Exhibition Park, Wm. Houston, Central Prison, and Mantion Bros., Eglinton, were the principal exhibitors in that line. The new and rare section for which there were 4 entries, brought out some good things and attracted a good deal of attention. Ferns were in fine feather; both florists and gardeners brought some grand specimens, a Nephrolepis exaltata shown by Mr. G. Vair, to all appearances beating the record. Platycerium grande, by the same exhibitor, was very fine.

There was a very large show of both flowering and foliage stove and greenhouse plants. Among the former were Bougainvillea speciosa, Allamanda Schottii, Lagerstroemia indica, Clerodendron Balfourii, etc., all fine plants. Among the latter worthy of special mention were immense Pandanus utilis and P. Vitchii (Mr. John Thorpe probably will remember these), Alocasia metallica, crotons, anthuriums, etc. Palms both big and little were every where.

MENDENHALL'S GREENHOUSE BENCH

For the most tastefully arranged table Mr. John Cotterell, of Deer Park, most deservedly took the cake, but a table by Mr. W. J. Laing in an altogether different style to any of the others and in my humble opinion more natural and artistic, would with a better class of plants than was used have been "A1 copper bottom."

Cut flowers, designs, etc. I am afraid to go into. It must suffice for me to say that the exhibit was much larger, more artistic and altogether better than in former years. It was remarked by one who was there that it was quite up to the show last year at Boston during the convention.

Here is another hotel—the old Revere house, pulled down and built up again in modern style and now called the "Kensington." European plan, 50c, 75c and \$1 per day.

The bowling alley secured for the use of the S. A. F. bowlers will be in the Victoria Club building. The executive committee will remember visiting this place during their afternoon sleigh drive in January last.

E.

Boston.

The annual excursion of the Gardeners' and Florists' Club took place on Tuesday, July 21. About one hundred and fifty participated, some forty of this number being the wives and lady friends of the members. It is safe to say that no excursion of the club has ever given more general satisfaction or been productive of greater pleasure to the participants than this one. Being the first occasion of the kind in which the company of the ladies was permitted, some doubt was expressed by the boys of the success of the experiment, but if the testimony of those who went is accepted it is probable that the ladies will never be left out of the program again. The barge "Clifford" was secured for the trip and the course was down through the harbor beyond Nahant and back by Boston Light and Hull to Weymouth Landing. A lunch was served on the boat during the forenoon and dinner was ready at the grove on the arrival of the party. Base ball was the center of attraction for the younger element after dinner and the gardeners beat the florists by the safe score of 18 to 1. The bowling alley and the dancing pavilion were both well patronized, acceptable music being furnished by Hayden's band. A stop was made at Long Island, where the veteran John Galvin was taken aboard, and after cordial greetings was induced to favor the company with his inimitable song, "Maloney Don't Know that McCarthy is Dead."

On the way down Mr. Foster kindly pointed out to his friends the spot where he took his involuntary bath a week previous. In this connection Mr. Foster is not satisfied with the recent account in the *Flourist* of this adventure. He says that he had no "misunderstanding with the boom," but that Skipper McCarthy did maliciously and with mischievous intent deliberately cause the boom to swing around and strike him amidships, the result however being the same, viz., that he went overboard, mackintosh and all.

The garden committee of the Mass. Horticultural Society, accompanied by a number of their friends from the fruit, plant and flower committees to the number of twenty-five, had a very pleasant excursion on July 22 to Wood's Hill by invitation of Mr. J. S. Fay. Mr. Fay has exhibited, through his gardener, Mr. M. H. Walsh, at several of the recent shows in Horticultural Hall some extraordinary roses, pansies and hollyhocks, and it was a most gratifying opportunity to go and see where and by what means such remarkable specimens were grown. The visitors were hardly prepared for the display of hollyhocks which met their gaze. Such a collection, such variety of coloring, such perfection of bloom and such strong luxuriant growth was certainly a surprise. A photograph of one of the groups was secured by Mr. Fewkes, which will probably appear in a future number of the *Flourist* and will give a better idea of the display than any verbal description can convey.

Mr. Fay points with commendable pride to an area of about five hundred acres of what was thirty years ago barren sandy sea-side hills, which is now a dense luxuriant forest of pine, spruce, oak and maple, all the seeds of which he had planted.

The visitors were escorted over the grounds and after partaking of a delicious lunch were given an opportunity to inspect the hatching houses of the U. S. Fish Commission, which proved to be very interesting.

The Saturday exhibitions at Horticultural Hall during July have been made very attractive on account of the large contributions of hollyhocks from Mr. Fay, which have taken first premium in every instance.

The displays of native ferns by Mrs. P. D. Richards, R. T. Jackson and I. E. Coburn on July 25 were very complete and were specially interesting because correctly and legibly named. There were in Mrs. Richards' collection 51 distinct species and varieties.

A rare and showy plant, *Veltheimia purpurata*, bearing large heads of bright orange vermilion flowers, was shown by Wm. J. Martin.

A new and very beautiful rose has been received at the Arnold Arboretum. It is supposed to be *Rosa Wichuriana*. The flowers are single, white, and closely resemble the Cherokee, but are disposed in long racemes, the branches trailing on the ground. The foliage is beautifully glossy. W. J. S.

Chicago.

Mr. E. Boettner, of Weinhoebler & Co., started July 24 on a two-month's trip to Europe. He sailed from New York Tuesday on the Bremen Line Steamship Werra.

Mr. O. P. Bassett and wife have returned from a three-weeks stay at St. Clair Springs, Mich.

The rate from Chicago to Toronto and return at the time of the convention will be \$16.60. Train will leave Dearborn station at 3 P. M. Monday, August 17, and reach Toronto Tuesday at 8:45 A. M. Special sleeping cars will be provided and there will be no change of cars. The route will be via the Niagara Falls Short Line and the Canadian Pacific. Florists west and northwest of Chicago are invited to travel with the party from this point.

It was expected that the director general of the World's Fair would have named the head of the division of floriculture before this, but up to Tuesday morning no official action had been taken. However, it is conceded on all hands that Mr. John Thorpe will be the man, and the appointment will undoubtedly be made before the week is out. Mr. Thorpe is in the city, and has had frequent conferences with the director general.

Among recent visitors to the city were C. B. Whitnall and wife, F. P. Dilger and Adam Curran, of Milwaukee; D. W. Fowler, Wabash, Ind.; R. B. Currey and Edward Gilliam, Nashville, Tenn.; F. Bertermann, Indianapolis; Chas. W. Garfield, Grand Rapids, Mich.; John Walker, Philadelphia; W. L. Morris, Des Moines, Ia.

The ball game at Niles Center last week was a great event. See report elsewhere.

Sports.

Chicago.

It was a symposium in all colors—black and blue. Chicago, 7; Niles Center, 5. Here is the book:

CHICAGO.	NILES CENTER.
Curran.	Kirscht.
McCollom.	Downes.
Kelley.	J. Poehlmann.
Zeck.	A. Poehlmann.
Bock.	M. Poehlmann.
Hartwirth.	Sport Ambiguous.
Kreiting.	Schwiger.
Kemmler.	Kerstädt.
Walz.	Harrer.

Chicago went to the bat. There were two umpires. They were Dick Cogan and the only Joe Curran—Cogan in pink and Joe in black and brown. Joe's um-

brella was the black part of him. Of course, everybody could see that Cogan was not from Chicago, and that marigold blue and yellow fellow Zeck attempted to get Cogan behind the scenes, but Cog said, "Not while I am as pink as this," and Zeck then went to fourth. Cogan was doing the ball end of the string at this time, but Joe Curran was standing on first, or about there, with his umbrella well open. Johnny Walker, from Philadelphia, said, "Did you ever see the Mikado? If you never have seen him, there he is over there with that decomposed piece of coloring over his head."

Everybody kicked at the decisions of the umpires and it was right to kick. But of all the fellows I ever met and could not admire was Scorer Burdall. The way he kept score and the way he tried to influence our Joe and Cogan was suggestive of a very, very dark purple. And then it was said that this same scorer made a first class crystal white pitcher out of a stem winter in three months and Burdall when attacked took out his harmonica and played "Annie." The way Burdall scored would not suit either Anson or Ewing, but he scored and scored for Chicago. The Niles Center boys want a scorer with more pink in than Burdall has; that is, if they want to win the next game.

That Niles Center sport and all those Poehlmanns and Schwiger and Kerstädt and Harrer, didn't they fight! And Downes, he broke (it was told me) seven bats. I kept tab on three and a half. In my opinion, if the Niles Center boys had chosen any other colors they must have won. As it was, the pinks were washy, very washy, and the blues were a nice scarlet or yellow. You cannot win without two positive colors, Niles Center.

The Niles Center boys are all right of course, but Billy Downes with his faded American Beauty cap and his concentrated diamond pattern gum shoes, pitched; and he did pitch, but he slid better than he pitched. In the sixth inning at second everybody thought he had slid his last, but 'twas not so. His eyes wobbled and he says to Kreiting, "where's the umpire?" Dutch said, "he is taking a walk." So Downes takes hold of the string on the bag and walks in. There was another fellow in that Niles Center crowd by the name of Kirscht that pitched lurid colored balls occasionally. Fisk said Kirscht would curse Chicago, after which Kennicott and his mascot and some others walked over to the bus.

Chicago with their manufactured stem winder floral curved pitcher and with that greatest of all catchers (not excepting Buck Ewing), Jim Curran, just paralyzed those Niles Center boys. Jim went in to catch with a glove bigger than any leg of a Southdown sheep. Everybody said, "Jim, that glove will down you sure," and everybody was right, because at the end of the fifth inning he tried to bore a hole through the Niles Center catcher coming from third home. Of course he did not bore the hole, but he came very near being buried, in fact he would have had to be buried if he had died. That brown basted mutton leg glove is what caused the trouble. Afterwards he got a grey and green glove that fitted him, and how he did catch.

Phil Hauswirth was on third part of the time and some of us were cheering the scorer, but by accident Phil had nothing to say at a supreme moment when a ball wended its white wings toward him and he did catch it, then he accidentally threw it to first and made a double play.

Joe Curran winked his umbrella and the side was out of course.

Bats broken: Niles Center 7, Chicago 2½.

At about 6 p. m. the Chicago boys left for home and after their departure the quiet little town of Niles Center was observed to bear that rich and warm glow of color that we find in the flowers of Salvia splendens. By the way, John Thorpe says this flower comes as near to being a true red as anything he can think of, and John ought to know.

The Chicago boys wore red.

MOKOMO.

No business of importance was transacted at the last meeting of the Florist Club. Mr. John Thorpe was present and after some informal discussion of World's Fair matters, the meeting adjourned to the bowling alley, where some very creditable scores were made. John Weston, who had rolled only a few games, amazed the old-timers by putting up a score of 180, and J. C. Vanghan led his side by a score of 175. J. D. Reynolds was on his muscle and accumulated 177 as the result thereof, and G. L. Grant had consecutive scores of 215, 216 and 225 to his credit. Mr. Thorpe rolled the prettiest ball and got lots of pins too. Frank Bentley has allowed his mind to run so much to base ball of late that his bowling was mainly balls and but few strikes, and Phil Hanswirth's game was also below his standard, probably from the same cause. But Phil made one good score—closely approaching the 200 mark.

Philadelphia.

The florists' base ball team, composed of city florists, paid a visit to Riverton last Saturday for a game with the H. A. Dreer team. Both teams were anxious and played ball from the start. Cartledge made a great one-hand catch in left field, and handled the stick well. Dreer's boys batted well and stole bases with impunity, Finnegan being very dexterous. Dreer's boys gained a lead of seven runs in the third inning but were obliged to give up the ball to the florists, who finally won the game by hard hitting and good base running.

THE SCORE:

	1	2	3	4	5	6	7	8	9
Dreers.....	4	3	0	0	1	3	2	3	16
Florists.....	0	0	0	6	1	3	6	3	x-19

Messrs. Harris, Smith, Farson and others, who happened to be at Riverton, were very hospitably entertained by Mr. Eisele, Mr. Dreer's foreman. A hasty look through the houses revealed an immense stock of young palms and ferns; there really seemed to be almost enough to supply the whole country, and yet by far many varieties will have been sold out.

The return game between the H. A. Dreer and Robert Craig base ball clubs came off on the 18th inst., on the latter's grounds. The weather was very unfavorable, rain falling in torrents, but at 4 o'clock it cleared off and a 5-inning game was played. The Craig team on this occasion (not being affected by any 4th of July influences), won by the comfortable margin of 7 to 1. The battery work of McLean and T. Mullen was superb, while Farrington again distinguished himself on second base. Ely caught a good game for the visitors. The "rubber" game will be decided at Riverton August 8, when some phenomenal playing may be expected. After the game the visitors were hospitably entertained and two

hours of song and story were pleasantly passed. Mr. A. Goodwin sang some good songs, including "I've Worked Eight Hours This Day" and "The Stowaway;" the latter was rendered with a delicacy and feeling that was much appreciated. Mr. Carr stamped himself an elocutionist by the manner in which he recited "The Ghost." T. Mullen danced an Irish jig and Mr. Craig gave a fine rendering of the old favorite, "Annie Laurie," all hands joining in the chorus.

THE SCORE:

	R.	H.	P.	O.	A.	E.
Craigs—						
Donohue, ss.....	2	1	1	1	0	0
T. Mullen, c.....	2	2	8	3	0	0

McLean, 8; by Moody, 5.					
Umpires—Messrs. McCall and Eccles.					

PHILADELPHIA.

News Notes.

WABASH, IND.—D. W. Fowler is rebuilding, and adding a new rose house 20x80.

PORTLAND, OREGON.—Ryan & Baden have opened a floral store at 166 Third street.

ROCKVILLE, CONN.—Wm. F. Schmeiske & Co. have added two new houses, each 22x60.

SALT LAKE CITY, UTAH.—John Reading has added a rose house 130x20, a fern house 80x14, and otherwise improved his place.

FORT COLLINS, COLO.—This section was visited by a very destructive hail storm July 16. Some of the hail stones exceeded an inch and a half in diameter.

GLENWOOD SPRINGS, COLO.—Einzensperger Bros. have in course of construction three houses about 75x18 each, for roses, and two 100x10 each, for general stock. All are heated by steam.

NEW YORK.—The Whilldin Pottery Co., of Philadelphia, has opened a large warehouse in Jersey City, to meet the increased demand for their Excelsior and Standard flower pots in this city and vicinity.

ELMIRA, N. Y.—Grove P. Rawson has added a new house 200x20, for roses. It is a model of its kind. Roses and violets are his specialties, and he reports his plants as looking exceptionally fine for the season.

DENVER, COLO.—James L. Miller has invested in nine lots at Thirty-fourth and Downing avenues, and has now in course of construction three rose houses 100x20 each, a propagating house 85x10, packing room 85x15, an office 40x20, and basement for storage purposes. The place will be heated by hot water on the overhead system.

COLORADO SPRINGS, COLO.—Edgar Turner, for the past three years in the employ of S. D. Bradford, died July 19, aged 35 years. His death was the result of a protracted spree. Mr. Turner was a very popular young man, and possessed considerable ability. But for his convivial habits he would have made his mark. His mother and brother reside at Slough, England.

DES MOINES, IOWA.—Blair & Marshall have dissolved partnership. Mr. Marshall takes the greenhouses and Mr. Blair the city store, thus placing matters substantially as they were before the partnership was formed. W. L. Morris is building two new rose houses, one 18x100 and the other 20x100. He is also giving his other houses a general overhauling. Mr. Morris visited Chicago last Monday.

WICHITA, KANS.—Chris. P. Mueller has purchased the stock in the Fairmount greenhouses and leased the greenhouses for a term of years. He will put in a full stock of roses for cut flowers. Steinbuechel & Kuechenmeister have put up a house 20x40 for decorative plants. D. J. Chatfield, of the Fairmount Floral Co., is building some new houses at his home on College Hill. Business is very quiet at present.

NASHVILLE, TENN.—Louis Houry will build six or eight new houses this fall. Joy & Son will also make extensive additions to their glass. Mr. A. A. Newsom is removing the houses from the Rosebank nurseries to another location, where they will be rebuilt and added to. Cantrell Bros. have succeeded M. Tritschler & Son, on Hyde's Ferry Pike, and Chas. Tritschler also has a place on the same road. Messrs. R. B. Currey and Edward Gilliam visited the florists of Chicago and vicinity last week.

NEW ORLEANS, LA.—At the annual meeting of the New Orleans Horticultural Society, held July 16, officers for the ensuing year were elected as follows: Jas. Newsam, president; Chas. Eisele, president pro tem; Jno. Eblen, treasurer; re-elected; Chas. Wise, secretary, re-elected. The report of the finance committee showed the treasury to be in a flourishing condition. Applications for space at the coming chrysanthemum show are being received from different parts of the country and all indications are favorable to an excellent display.

SPRINGFIELD, O.—The Good & Reese Co. is building seven houses this summer, one 20x225 and six 20x106 each. This makes a total of twenty large houses in their plant. They are also adding another large steam boiler. Mr. John Doyle has started to build on North Limestone street. His many friends wish him success. Mr. W. B. Mead has built a new range on the Selma pike, and Messrs. Wilson Bros. are adding three houses 20x100 each and putting in a steam boiler. This city is famous as a rose center, distributing over a million roses each year, mainly to amateurs. Quite a number of the florists of this city will attend the convention at Toronto.

321 Market St.**CREDITS**Again we hear of cases in which whole-
sale growers and dealers have been caught
by alleged swindlers, who it is said ordered
goods without any intention of ever pay-
ing for them. It is a pretty hard thing to
prove what a man's intentions are, but it
seems safe to assume that the inten-
tions of several parties ordering goods
have been to deliberately swindle con-
fiding wholesalers. The thing that amazesus is that they succeed. Can it be possi-
ble that there are men conducting a ship-
ping business that are so guileless and con-
fiding as to ship every order they receive
without inquiring as to the responsibility
and honesty of the one ordering? It would
seem so, else how can men who have
absolutely nothing to entitle them to
credit secure it so readily?One firm writes us that they have sent
over \$100 worth of goods to a man in a
northwestern city, whom they now allege
never intended to pay. And this firm has
the reputation of being composed of
pretty good business men. According to
the story now told this alleged swindler
has been carrying on this sort of work for
a considerable time past, and if this is so
then certainly a single letter of inquiry
would have revealed the true state of
affairs. Again the party had been re-
ported to the Florists' Protective Associ-
ation, and a query addressed to the secre-
tary would have revealed the fact that
the party had been complained of and
rested under suspicion of being a delib-
erate swindler. Still none of these things
were done. No precautions whatever
were taken and the goods were blindly
shipped on an order from a man about
whom the shippers knew nothing what-
ever.So long as business men take such
chances just so long will they be victim-
ized. And such child-like faith in human-
ity is an open invitation to swindlers to
profit by it.**PACKING PLANTS FOR SHIPMENT.**—One
of our correspondents truly says that the
proper packing of plants for shipment is
fully as important as a reduction of high
express rates, to stimulate the shipping
trade. And certain it is that many ship-
pers are lamentably weak in this direc-
tion. We should be pleased to have some
hints upon the subject to lay before our
readers. Don't waste time and paper
criticising any particular firm's style of
packing, but give us your ideas of the
general rules to be observed in packing
plants.**EXPRESS RATES.**—Regarding our notes
on this subject, one reader writes to
indorse what we said, and to say that if
the Society of American Florists is not in
a position to meet any or all of the
expense that may be incurred, he, for one,
will stand an assessment to make up a
fund with which to prosecute the cam-
paign outlined. We believe the society is
in a position to supply both the men and
the money for the work, for the expense
will certainly not exceed two or three
hundred dollars.**OUR CONVENTION SUPPLEMENT** will be
published with the issue of August 13,
and the map and directions it will contain
will, we believe, be of considerable value to
those attending the meeting at Toronto.
Exhibitors wishing to call special atten-
tion to their exhibits will find the supple-
ment a very effective medium.A FLOWER from a "climbing sport of
the Flosser rose" has been sent us by
Mr. W. A. Harkett, Dubuque, Ia. He
states that the plant is a little over one
year old, pot grown, and seven to eight
feet in height.It is getting toward the last call for
advertisements for the convention sup-
plement. Copy must reach us by August
7 to be sure of insertion.The affairs of E. Kelley, florist, Duluth,
Minn., are reported to be in very bad
condition.

AM. SEED TRADE ASSOCIATION.

F. BARTELDUS, Lawrence, Kan., president; A. L. DON, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggitt, chairman membership committee, Wethersfield, Conn.

PROF. F. W. BARTELDUS, of the American Seed Trade Association, is portrayed in the July issue of the *Horticultural Art Journal*, with a short biography. Mr. B. is 39 years of age, and has been established in the seed business since 1873.

The Kansas City Grain and Seed Company has been incorporated at Kansas City, Mo., by J. E. Reynolds, H. B. Hull, and J. A. Bryant.

SEND us your adv. now for the convention supplement which we shall publish with our issue for August 13.

The Long Island cabbage seed crop is reported looking well.

Lining Graves.

A simple method is in vogue here, where most of the openings for interments are in a subsoil of firm clay. The grave is prepared specially for it by being dug four to six inches larger around on each of the perpendicular sides and ends. Evergreen branches only are used for the first or rough lining and for covering over the fresh pile of ground. Hemlock is preferred, as it lays flat and smooth, covers quick, and its deep green is useful for the purpose. No. 16 wire cut in suitable lengths, and bent hair-pin shape, pins into the soil readily and firm enough, and fastens on the flat branches nicely. This is begun at the bottom of the grave, working up that style till reaching the top, where all can be finished off smoothly with the same material, and strings of smilax be added either drooping down or looped around the grave and caught up by clusters of flowers. Or with this firm and green ground work flowers can be conveyed extra in clusters and bunches in a variety of ways and to any extent. We have seen elaborate work done by using adiantum foliage and choice flowers freely in finishing. In this case the fern plants were used, the balls of roots back of the green and out of sight. DAN L. B. LONG.

Buffalo, N. Y., July 13.

Steam Heating.

I am contemplating changing my heating apparatus, in some of my houses, from hot water to steam. Can I use my 4-inch cast-iron pipe for return under the benches? Will some of the subscribers of the AMERICAN FLORIST please answer through the paper, and oblige.

Des Moines, Ia., R. A. ROLLINSON.

OUR ANNUAL convention supplement which will be published with our issue of August 13 will contain a sketch map of the city of Toronto on which will be prominently indicated the Convention Hall, hotels at which rates have been secured, and many other items of immediate interest to the visiting members. Advertisements for the supplement will be received at usual rates.

WHEN writing to advertisers please mention the fact that you were induced to write by the advertisement in the AMERICAN FLORIST. You will benefit us by letting advertisers know that it is the FLORIST that is bringing them trade.

SITUATIONS, WANTS, FOR SALE.

OUR NEW TRADE LIST NOW READY.

Modern Greenhouses.

A visit to the extensive greenhouse establishment of E. G. Hill & Co., Richmond, Ind., shows that this enterprising firm is keeping pace with the times. It will be remembered they sold out their old plant about a year ago, together with their catalogue and retail trade. They at once bought another property of some ten acres a few squares farther out of town, and soon erected a large range of glass. They now have seven large houses 165 feet long and averaging 20 feet wide, also five lean-to houses of same length. These lean-tos make very useful little houses for propagating and pushing on small stuff. A large roomy shed, 20 feet wide and running the whole length of ends of greenhouses, is no doubt good for 50 years.

The shed on the east side is used for pots, soil, sand, manure, etc., while the one on the west end is used for packing, shipping and potting. At the south end of this west shed is fitted up a very pretty and comfortable office.

It is not the size and beautiful location of this place that I wish most particularly to speak of, but the durability of its construction. The houses used for the greenhouses are large, heavy red cedar; all the sash bars and plates are cypress, and have three good coats of white paint. The purlin used for supporting the rafters answers a double purpose. Mr. Hill has utilized the 1-inch pipe for water. This is not only a saving of pipe, time and labor, but has a tendency to keep the water warmer for syringing in winter. The glass used is 1 1/2 x 2 1/2, double strength, made at Kokomo, Ind., by natural gas. Mr. Hill thinks this superior to any French glass he has seen.

It is evident he does not contemplate renewing his benches every few years, as they will surely last as long as the houses. Red cedar is used for posts, light street railroad iron for cross pieces, and on these run lengthwise the same kind of iron, 18 inches apart, on which slate or clay slabs are placed. Mr. Hill has purchased nearly \$500 worth of these clay slabs, but he likes the slate best, as it is more convenient to handle and much cheaper. A 12-inch board is used around the outside, and the bench is completed. With the exception of this one outside board (which, by the way, can be renewed very easily) such a bench should last in good condition for 25 to 30 years. The greenhouses and sheds are all encased with sheet steel. This makes the building practically fire proof from the exterior, as well as making a very neat finish. I think the cost is about the same as good weather boarding.

Two large steam boilers are used, each 4x16 feet. One of these consumes natural gas, which is the principal fuel used, while the other is kept in readiness to burn coal in case there should be any accident to the gas. Mr. H. is a great advocate of overhead heating. He runs a 2-inch feed pipe overhead, which feeds all the smaller ones on the opposite ends and returns under the benches. Judging from the size of smokestack at this place, one would think Mr. H. contemplated turning his place into a manufacturing establishment. He used a whole car load of block stone for the foundation; the balance is built of brick, is 6 1/2 feet high and cost \$500. He assured me he had done building, but we all know he is yet a young man and a hustler and cannot stand still. With his beautiful location and extended trade it would not surprise me to see his already large place double in size in a few years. Kokomo, Ind. W. W. COLES.

PANSIES.

PANSIES THAT ARE UP. No need to worry over getting the seed to come up, it is up and ready to plant when I send them.

It is not only the plants that are up, the strain is up also; up to, and a goodly number of my customers say, above any strain in the market. The price is down, considering the quality of the strain, seed as good would cost you about as much per 1000 plants. My price is \$5.00 per 1000, or in lots of 2,500 and over, \$4.50 per 1000.

SEND FOR LIST AND SHORT PAPER ON CULTURE.

PLANTS READY AUGUST 20th TO DECEMBER 1st.

SMILAX.

Plants ready July 1st and later. These will be nice and stocky, and ready to go right ahead. There is some 40,000 here; let me have a chance to fill your order.

Send 10 cents for samples and get my prices before ordering elsewhere.

L. B. 338.

ALBERT M. HERR, LANCASTER, PA.

PANSIES.

Plant your frames this fall with PANSIES that will SELL AT SIGHT. You want the BEST if you keep up with the procession. My strain cannot be surpassed for size, color, or substance of flowers. I know my stock will please, and I am prepared for a big rush.

FINE STOCKY PLANTS, once transplanted, \$5 per 1000 by express; 75c. per 100 by mail. Special prices on larger lots. Orders booked now filled in rotation, or on any date desired after August 15.

CARTHAGE N. Y.

THE CHEAPEST AND BEST OF ALL. FIR-TREE OIL INSECTICIDE—soluble.

FOR PLANTS.—To make a solution for washing or cleaning purposes—Half-a-pint of Fir-Tree Oil to ten gallons of water.

For Green and Black Fly, Thrip, American Blight, Woolly Aphis, etc.—Half-a-pint of the Fir-Tree Oil to two or four gallons of water, or two or three table-spoonsful to the pint.

For Red Spider and Caterpillar—Half-a-pint of the Fir-Tree Oil to two gallons of water, or three table-spoonsful to the pint.

For Mealy Bug, Brown or White Scale—Half-a-pint of the Fir-Tree Oil to four or six quarts of water, four to eight table-spoonsful to the pint.

For Mildew and Blight on Fruit or Foliage—Half-a-pint of the Fir-Tree Oil to a gallon of water, or six table-spoonsful to the pint.

Used with warm water it is quicker in its action than when cold is used.

Soft or rain water is necessary, and Applied in Wood, Tin or Pot Vessels, —dissolved Iron Vessels must not be used.

FOR ANIMALS.—For Skin Diseases and Killing Vermis mix one part of Fir-Tree Oil with three parts of warm water and wet the affected part each day. In some cases it may be used stronger. For Ring-worm apply full strength with a brush each day.

FOR BIRDS INFECTED WITH PARASITES.—Put a table-spoonful of Fir-Tree Oil in one quart of warm water and dip the bird in it, taking care that its eyes are protected, hold the bird in one hand for one minute, then dip into clean tepid water; this may be repeated. If necessary a much weaker solution may be used with a spray producer.

Sold in Bottles and Tins.
Manufacturer—E. GRIFFITHS HUGHES,
MANCHESTER, ENGLAND.

A. H. HEWS & CO., CAMBRIDGE, MASS.
Mention American Florist.

AHEAD OF EVERYTHING. We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
9-inch.	3,000	250 lbs.
8 1/2-inch.	2,400	200 "
8-inch.	1,500	150 "
7 1/2-inch.	1,450	150 "
7-inch.	1,250	130 "
6 1/2-inch.	800	100 "
6-inch.	600	75 "

It will be seen at a glance, that our pots are one third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **SEND FOR PRICES.**

Insuring Greenhouses Against Fire.

In response to several queries as to which companies insure greenhouses and their contents against fire and lightning, we print below the list given by Mr. May at the New York convention of the Society of American Florists:

Royal, of Liverpool, England; Liverpool, London and Globe, England; London and Manchester, England; North British, England; Fire Insurance Association, England; the Greenwich Insurance Co., of New York City; Providence, Washington, of Providence, R. I.

Though nearly all are foreign companies, each have agencies in American cities, and nearly all general insurance agents can secure policies in the companies named.

Of Course.

Uncle Blackstone says, "Of course you can't afford to lose \$50." We beg Uncle Blackstone's pardon; a great many florists can. The man who can get \$7 worth of hail insurance by paying 6 cents, and neglects to do it, cannot only afford to lose \$50, but \$500.

JOHN G. ESLER.

If you have anything to sell to florists don't fail to place an adv. in our convention supplement, to be published with our August 13 issue.

Now is the time to send in your advertisement for the convention supplement.

IN THE recent advertisement of Mr. F. Mau, the name of one of the orchids offered should have been *Lycaste costata* instead of *cristata*.

When you write an advertiser tell him that you saw his advertisement in THE AMERICAN FLORIST.

IT IS possible that a new national park will be located in Colorado in the vicinity of Pike's Peak, and to be known as Pike's Peak National Park.

WE HAVE received part of the transactions of the Massachusetts Horticultural Society for 1889 from Mr. Robert Manning, the secretary.

CONVENTION SUPPLEMENT advertisements must reach us by August 7 at the latest. If you want to be represented in the supplement send copy for your advertisement now.

MR. LONG has been working out the idea of a handsome lithographed poster for exhibiting chrysanthemum shows, that might be used by anyone, by adding name, place and date, and will, we understand, exhibit some designs at the meeting of Florists' Clubs at the Toronto convention.

MR. H. YOSHUE, Oakland, Cal., writes saying that in our report of the spring show of the California State Floral Society he was not an exhibitor as stated, and that the Japanese novelties were sent by the Yokohama Gardeners' Association and it was to them the silver medal was awarded.

THE FLORAL ART UNION was the name of an organization of florists and gardeners that existed in New York City in the early days of the trade. Mr. D. W. Fowler, now of Wabash, Ind., tells us that he was a resident of New York City and a member of the "Union" in 1838. He says that the meetings of the organization were held at the corner of Broadway and Twenty-first streets.

Society of American Florists.

"W. J. STEWART: Dear Sir—I have been for some time wondering whether I could spare the time and expense to attend the next meeting at Toronto; to-day I received a notice from you from which I infer that because I failed to attend the meeting at Boston last season I will be required to pay \$6 for the privilege of wearing one of the little badges this season. If this is the correct inference you have my thanks for assisting me to decide not to attend the next meeting; and you will confer another favor by erasing my name from your books. Respectfully,

As at this time of the year I am in constant receipt of letters similar to the above, I take the liberty of publishing it, omitting the address of the writer.

In reply to it and others of like tenor, I desire to call the attention of present and prospective members to the following extracts from the by-laws of the society, a copy of which has been mailed to every member, and which seem to indicate plainly what a member's pecuniary obligations are:

DUES.

SEC. IV.—The annual fee shall be for each member the sum of \$3 payable on or before the first day of December of each year.

DELINQUENT MEMBERS.

SEC. VII.—All members whose dues are unpaid shall be so notified by the secretary, and when a member shall have paid no dues for a period of eighteen months after receiving such notice, his name shall be dropped from the rolls, and he can be readmitted to membership only by a majority vote of the executive committee.

It is reasonable to assume that a man of ordinary intelligence would know that it is impossible to maintain an organization such as the S. A. F. without some steady revenue collected systematically from its members. The sum of \$3 is not contributed for the privilege of attending conventions solely. Fully one-third of the paying members seldom or never attend the meetings, but they pay their dues regularly and cheerfully, well satisfied, no doubt, that they get the full value of their money in the annual report of the proceedings of the society, and that they are also making good use of their money in contributing this small share towards the support of an organization which has brought so much honor to the cause of floriculture and has done so much to educate and elevate those who are engaged in it.

The whole amount of assessments for a continuous membership from the organization of the society to the present time has been \$17, and it is setting a very low valuation on the beneficial results accomplished during the seven years of the society's existence, to say that there is not a gardener or florist in the land who has not been directly benefited considerably more than \$17 worth, whether or no he is or ever has been a member.

There are men in the society who have never thought to ask, "What good is the

society to me?" but "What can we as a society do for the common welfare?" The constitution and by-laws state the objects of the society to be "to lift up and carry forward all that tends to advance the interests of its members," and these men have unselfishly adopted this as their motto in all their intercourse with its members, ready at all times to give the benefit of their study and experience freely to their fellow florists. These pay their dues regularly. Why should not those who profit by their generosity do likewise?

WM. J. STEWART,
Secretary S. A. F.

Principal Toronto Hotels.

NAME.	CAPACITY.	RATE PER DAY.
Queens Hotel, <i>Headquarters</i> , 78 to 92 Front St.	300	\$3.00 to \$4.00
Rossin House, King and York Sts.	250	3.00 to 4.00
Walker House, Front and York Sts.	250	2.00 to 2.50
Palmer House, King and York Sts.	250	2.00
Arlington Hotel, King and John Sts.	200	3.00 to 4.00
St. James Hotel, 15 York St. (opp. station)	50	1.50
Albion Hotel, Market Square.	300	1.00
Elliott House, Church and Shuter Sts.	150	2.00
Hotel Metropole, King and York Sts.	75	2.00
Avondale Hotel, Simcoe and Wellington.	50	1.50
Richardson House, King and Spadina.	100	1.50
International Hotel, Front and Simcoe.	200	1.50
Black Horse Hotel, Front and George.	125	1.00
Russell House, 215 Yonge St.	50	1.50
Power House, King and Spadina.	90	1.50
Schiller House, 120 Adelaide St. E.	50	1.00
Lakeview Hotel, Parliament and Winchester.	75	1.50
Keachie's Hotel, 30 King St. W.	50	(European)
Empress, Yonge and Gould.	100	1.00 to 1.50

The majority of the above hotels are in the business portion of the city, the center of which is about one and a half miles from the convention hall in the Horticultural Gardens. Street cars pass the doors of all of them, making communication between hotel and hall quite easy.

Members wishing to secure accommodation before hand will do well to communicate early with Mr. J. H. Dunlop, 1 McKenzie avenue, Toronto, Ont.

New York to Toronto.

The New York delegation to the Toronto convention will take the train leaving New York at 5 P. M., August 17, on the West Shore railroad. The route will be to Lewiston on the Niagara river by rail, thence down the Niagara and across the lake by boat to Toronto, arriving there at 10:30 A. M. on Tuesday. Fare from New York and return \$12.70,

on the certificate plan. Each person going pays full fare (\$9.50) and must ask the agent when purchasing the ticket for a certificate, which must be properly stamped and signed. This will, when signed by the secretary again in Toronto, enable the owner to return for one third rate, namely, \$3.20. Arrangements have also been made whereby those wishing to stay over for a few hours at Niagara on their return can do so. Delegates wishing to meet this train en route and desiring sleeping car accommodation, can have the same reserved by writing to the undersigned not later than Wednesday, the 12th of August, stating fully the number of berths required and where they will board the train. If enough delegates signify their intention of going to Niagara to Lewiston, this making it very convenient and saving something in the expense also. If any delegates wish to go a day earlier there will be several members of committees going by the train leaving New York at same time on Sunday afternoon and accommodation can be secured in the same way for that train as for the day following by advising

Summit, N. J. JOHN N. MAY.

Chicago to Toronto.

The rate from Chicago to Toronto and return, via the Niagara Falls Short Line and the Canadian Pacific, will be \$16.60. Train leaves Dearborn station at 3 p. m. August 17, and reaches Toronto at 8:45 a. m. on the 18th. Special sleepers will be provided, and there will be no change of cars. Florists in the west and northwest are invited to travel with the party from this point. Berths may be engaged in advance by addressing G. L. Grant, 34 La Salle street, Chicago.

Names and Addresses of Chairmen of Committees of Toronto Gardeners' and Florists' Club for S. & F. Convention, August, 1891.

Reception Committee—Mr. John Chambers, Superintendent Parks and Gardens, St. Lawrence's Hall, Toronto, Ont.

Trade Exhibit Committee—Mr. Thomas Manton, florist, Eglinton, Ont.

Entertainment Committee—Mr. W. J. Laing, 401 Huron street, Toronto, Ont.

Ladies' Committee—Mrs. Fraser, florist, Spadina Crescent, Toronto, Ont.

Introduction Committee—Mr. F. G. Foster, florist, Hamilton, Ont.

Decoration Committee—Mr. C. Arnold, florist, 521 Queen street, W., Toronto, Ont.

Finance Committee—Mr. J. H. Dunlop, florist, corner of Bloor street and McKenzie avenue, Toronto, Ont.

Printing and Badge Committee—Mr. S. E. Briggs, of the Steele Brothers Co., corner of Front and Jarvis streets, Toronto, Ont.

Bureau of Information—Mr. George Var, care Sir D. S. McPherson's Chestnut Park, Toronto, Ont.

CONVENTION SUPPLEMENT advertisements must reach us by August 10 at the latest. If you want to be represented in the supplement send copy for your advertisement at once.

THE FIFTH annual convention of the Association of American Cemetery Superintendents will be held at Chicago, September 9, 1891. Full information may be had from the secretary, Mr. Frank Higgins, Woodmere Cemetery, Detroit, Mich.

Orchids at W. S. Kimball's.

I recently enjoyed a visit to Rochester, or "Powersville," as it is sometimes called, although some have suggested "Orchidville," on account of the scarcely equalled collection of orchids, the property and hobby of W. S. Kimball and the pride of colonial George Savage, well known to horticulturists as a prize taker in this particular line.

At all times of the year the houses are worthy of a visit and visitors on their way to Toronto would be well paid to stop off.

Cypripediums are the specialty here and it is the "Meeen" of everything new and interesting in this particular family. One of the prettiest, and in flower for the first time, is a variety named after the enthusiastic owner of these many treasures, namely, Cypripedium Kimballianum, and it does honor to the gentleman it is named after. It is of the praestans type, but far more handsome; it is a bolder and more striking flower altogether; the yellow in the dorsal sepal is deeper, and the chocolate colored bars darker and the petals more twisted. Altogether it is a grand acquisition, and Mr. Kimball may well feel proud of it.

Of the "tailed" or caudatum section many varieties were noted, more especially C. caudatum Wallisii, the white variety; C. caudatum nigrescens, the black variety; C. caudatum roseum, and many others, bearing ten to eighteen fully developed flowers. C. grande atratum, a dark variety of C. grande, and undoubtedly one of the finest hybrids ever raised, has C. caudatum (in my opinion one of the most beautiful and striking of the group selenipedium) as one of the parents, which it greatly resembles in its "tails." It keeps in flower a long time, and at the time of writing bore fifteen immense flowers of great substance, showing as in all plants seen here, good culture and careful attention to detail.

Cypripedium Schroderae, another hybrid of C. caudatum, and that little gem, C. Schlimii, is named after Baron Schroder, of orchid fame. It is one of the best representatives of the breeders' skill, and shows what may be done in this particular line. Mr. Savage has quite a number he is coaxing along and from which he expects great things. Cyp. Cecelia and Cyp. Orphan of Rochester, though not yet in commerce, were raised by him at Mr. Kimball's during the last year.

Among the many other specimens in flower were, C. Sedenii candidulum, a white variety of C. Sedenii, with eight spikes; C. Druryi, a very distinct species from the Travancore mountains, with dark bands through the middle of the sepals and petals; C. Lowii, well known; C. Petersii, C. Parishii, unique and well represented, as also were the stately C. Hookeri, and its sub-var. volutianum; the bold C. argus Moensii, the modest C. Schlimii and many other species and varieties, including C. bellatulum and about 250 C. Lawrenceanum, with many very pretty varieties among them, including that rare "Albino," Cyp. Lawrenceanum Hyemum, flowered here for the first time in America just twelve months ago. The rare C. Sanderianum, somewhat difficult to flower, was giving great promise.

Of miscellaneous orchids many unique things were in flower, the most conspicuous of which are included in the following: Cattleya (Mossiae) Wagneri, the true white form, with massive flowers; Cattleya Skinneri, also, very graceful, with 25 fully expanded flowers; Cattleya dolosa, of the nobilior section, with very dark mauve flat petals, very showy, and several hundred Lælia purpurata flowers with the white variety went to make up a well filled house.

Of dendrobiums I saw here the finest piece of D. Freemanii it has been my lot to see. Fancy one bulb covered with 40 odd flowers, of immense size for the variety and fully developed. Say, George, you did well! D. Picardii latifolia, D. Wardianum, D. nobile Backhouseanum and D. suavisimum all carried a wealth of flower, as did also D. Jamesianum, a variety which, though somewhat more difficult to flower than the rest, succeeds and flowers well by giving it a cool treatment, as Mr. Savage does.

The old Vanda Roxburghii and Vanda Denissoniana, with pure white petals and deep orange throat, contrasted prettily.

A wealth of that useful odontogloss, O. citrosomum var. album with its hanging racemes of white and mauve tinted flowers, gave additional proof of its value to the florist and tried to vie with the arching spikes of O. Alexandrae and O. Pesatorei, which were simply reveling in their treatment.

Many masdevallias of the Chimæra section, including M. Wallisii and others, M. Harryana and many varieties, proved how easy it is to cultivate these little subjects, though a few years ago the idea of growing them here was scorned.

Miltonia stellatum, when cheap and plentiful, will prove useful for cutting, having light yellow flowers nearly as large as O. Vexillarium.

Only a partial list of the many good things to be seen here is given, but, as the hard hand said, "more anon."

June, '91. THE DRUMMER BOY.

Lycaste Aromatica.

The genus lycaste contains some of our best garden orchids, and L. aromatica is one of its most interesting species. The orange yellow flowers are between two and three inches across, and borne singly on slender, but erect scapes, which proceed from the base of the latest formed pseudo-bulbs to a height of four or five inches. The plant blooms very profusely during May and June, and the flowers possess a strong, agreeable perfume, fragrant to its very principal charm, though the color is by no means unattractive, a single plant in a 5-inch pot being sufficient to fill a greenhouse 50 feet long by 24 feet wide, with the delightful perfume.

A few words as to the culture of L. aromatica and lycastes in general may not be out of place at this time. The temperature in which they are grown should never be allowed to fall below 50°. They are not plants that dislike dense shade; but, being epiphytes, growing naturally in the partial shade of the trees whose trunks and branches they clothe, strong sunshine is also injurious. Ample drainage is strictly essential, and the best potting material is that composed of coarsely chopped peat fibre, sphagnum treated likewise, and broken crocks in the proportion of two parts of the former to one each of the latter. The pseudo-bulbs should always be elevated a little beyond the rim of the pot or pan, and it is advantageous to keep them clear of the potting material, which, for

BASKET OF ORCHIDS.

appearance sake and the better to retain moisture, may be surfaced with clean, picked sphagnum. As the new growth generally makes its appearance contemporaneously with the development of the flowers, the operations of potting should be performed some weeks in advance of those events, and to preserve the plants in luxuriant health use only such receptacles as are thoroughly clean and readily admit of the escape of water, copious supplies of which, through syringe and watering pot, will be required during the growing season, but less in winter, though the plants should never be allowed to become quite dry at the roots.

Cambridge, Mass. M. BARKER.

Some Cannas.

Among the "Crozy" or dwarf French cannas are there any having yellow flowers? My reasons for asking are, though I have quite a number of the new sorts, not one is a clear yellow. M. Crozy may have discarded those having yellow flowers in favor of the spotted varieties. If so, I think he has made a mistake. I was first made aware of this fact late last summer, when a lady drove in to look over my collection, with the view of making selections for the next spring's planting—this spring. The variety selected was the old *Premice de Nice*!—very nearly twenty years old. I have grown it more or less for the past fifteen

years. So far as I have seen it is the best canna with yellow flowers in cultivation. There is nothing among the Crozys that can approach it for effectiveness, especially when associated with another old veteran, namely, *President Faivre*. This has dark leaves and red flowers, and it stands pre-eminent among cannas having dark foliage.

Among Crozy's earlier introductions was one which has always impressed me as being very valuable. Its name is *Cardinalis*, and appropriately, too; that is, if *Lobelia cardinalis* is well named, for it suggests the highly colored flowers of our native plant at a glance.

I secured a few plants of *C. flaccida* last year. They were a trifle too flaccid, for many of the roots died outright, and the balance have not yet sufficiently braced up to produce a flower.

I cannot conclude without saying that the general public really seems to favor the self colors. Whether it is fashion or not I cannot say, but it is a fact, and the sooner M. Crozy or our own raisers turn their attention to producing them the better.

By the way, the consensus of opinion seems to favor *Mme. Crozy* as being better than *Star of '91*.

Premice de Nice has a few freckles on its flowers, but not enough to detract from their effectiveness. These few darker spots have often suggested to me that perhaps M. Crozy had used this variety in

his earlier operations in producing his now famous varieties with conspicuously spotted flowers.

EDWIN LONSDALE.

Basket of Orchids.

The basket seen in the illustration was one that we had made after the style of an ordinary oyster basket, but a little smaller. The rough, natural and perfectly clean material of which the basket was made contrasted very pleasantly with the delicate orchids, which were the principal flowers used.

H. H. BATTLES.

Pronunciation of Names.

M., in a late number of the *AMERICAN FLORIST*, made an inquiry (page 941) for the correct pronunciation of *clenatis*, *gladiolus*, *pelargonium* and *Niphetos*. Webster directs how to pronounce these as indicated by the following division into syllables: *Clem-a-tis*, *gla-di-o-lus*, *pel-ar-go-ni-um*. In *gladiolus* the accent is on the second syllable, making the vowel, *i*, long and the next syllable short. The name of the rose, *Niphetos*, is a pure Greek word, defined "snow-shower" in that language. The vowels, *i*, *e*, *o* are each short; hence the name should be divided into three syllables, *Niph-e-tos*. As the rose was introduced in 1844, according to Ellwanger, when a good

white tea was a novelty, I suppose the color and habit suggested the classic name.
D. S. HEEFERN.
Washington Heights, Ill.

Long Island Notes.

BY WM. FALCONER.

LYSIMACHIA CLETHROIDES, which friend Temple of Iowa praises so much, is very prettily in bloom, and a profusion of white flowers are useful in many ways. But what a weed it is to run in the ground! It is a hardy perennial.

ALPINE AURICULAS in frames have borne up better through the summer than common polyanthus, and so too have the capitata primroses.

PLUMBAGO CAPENSIS.—Now that it has got to growing and blooming in earnest, what a fine show it makes, and the white-flowering form is just as free growing and blooming as the blue one. And they keep in fine form till cut down by frost.

MY DOUBLE WHITE HOLLYHOCKS sown February 21 last are now in full bloom and only four feet high; this earliness and stuntedness are caused by the unusually severe drought. Double crimson-flowered, sown same time and treated the same have not yet thrown up flower spikes.

HELIOTROPE out of doors is fine. The spring struck plants are past their best; those struck in May are splendid. *Heliotrope* is a tender plant, but we always get our finest trusses of flowers in late summer and early fall with the long cool nights. It loves rich ground.

MUSHROOM BEDS.—Have finished cleaning and whitewashing our cellars and begun preparing manure for our first crop, to come in October. And we will keep up regular succession from then till April.

HARDY PASSION FLOWERS.—Last fall I left a lot of *P. corallæa*, *Constance Elliott* and *Arc-en-Ciel* outside, cut them down and mulched them well over winter; up to the 10th of July there was not the least sign of life in the plants, but now they are all coming up. At this late date surely we cannot call them hardy here; who could bother or afford to wait till the middle of July for their vines to come up; by that time our arborers should be clad with vines and blooming in order.

BOUVARDIAS are grown for their flowers in late fall and early winter, but what capital summer blooming plants they are! From the end of July on they are full of flowers and the more we cut them the more they branch and bloom. When grown for winter blooming we cut them back in summer to render them bushy and keep the flower stems pinched back till lifting time.

SOLANUM JASMINOIDES var. *GRANDIFLORUM*.—When such a conservative old florist as James Taplin is struck with the beauty and utility of a plant there must be something good in it, and so it was here the other day. The large size and pure whiteness of the blossoms of this variety as compared with the bluish tinged flowers of the type appealed to him at a glance that this was an excellent variety to grow out of doors for cut flowers in summer as well as for garden decoration. It is not hardy here, but I winter the old roots in a frost-proof cold frame, also strike a few cuttings in fall for young stock in spring, wintering them in the greenhouse.

ARISTOLOCHIA ELEGANS planted out of doors in summer grows vigorously and makes a handsome vine.

THE CHRYSANTHEMUM BEE-FLY has

been with us all summer. This doesn't forebode any good for next November.

We have a very large (35 by 40 feet) side-laid against a building and which is filled with a wide belt of dwarf cannas at back, then alternate rows of tritomas—different kinds and a row of each kind—with alternate rows of gladioluses between them, and montbretias in front. The tritomas bloom from July till November, and the gladioluses being of different plantings—the earliest planted next the cannas—also keep up a succession of flowers from the middle of July till end of September. The effect is gay and without any stiffness and all of these plants can be grown by anyone having an ordinary house cellar to winter the roots in as well as by me.

VINES ON TREES.—I planted by and growing up over the stems of old cedars in our woods and grounds we have climbing hydrangeas and schizophragma, also Veitch's and Koye's ampelopsis, English ivy and other vines, and this very dry summer has been severe on them. But the ampelopsis or English ivy or wistaria do not show any evil effects of it apart from curtailed growth; on the other hand the hydrangea and schizophragma have suffered severely, wilted and lost a good many leaves and have had to be watered several times. This shows that they are no dry weather or dry ground plants.

Nephrودیums.

This large group contains many species that are of value from a commercial point of view, and several of them have already proved their usefulness, as to be included in the regular trade lists of florists' ferns.

In point of general utility I am inclined to rank the nephrودیums third, placing adiantums first and pteris in variety second, though possibly the correctness of this classing may be disputed in some localities, it being well known that the demands of all markets are not alike.

But be this as it may, the fact remains that the nephrودیums are a valuable family, being easily reproduced, mostly of rapid growth, and in general not requiring high temperature or special cultivation in order to secure a satisfactory result.

It is scarcely necessary to state that these ferns are propagated from spores, this fact being patent in most places where any plants of this class are grown, at least so far as the well known *N. molle* is concerned, this species appearing in the form of self-sown seedlings in the most unexpected places.

Among the best species of this genus is *N. aristatum* var., a bold-looking fern with dark green leaves, that are marked down the center of the pinnales with a band of yellowish green. The fronds of this species are of medium size and of good texture, and the plant is sufficiently hardy that it frequently survives after all the others in a table fernery have succumbed to the furnace heated air. *N. aristatum* var. also stands well when cut, but possibly would not pay for this purpose on account of the limited number of fronds produced by each plant.

Another good one is *N. varium*, also known as *Lastrea opaca*, which is of similar outline to the preceding, though having but one color in the mature fronds, these being very dark green, and having the stems much covered with brown, chaffy scales. The young fronds of this species are also very noticeable in color, being a peculiar shade of light brown and sometimes tinted with pink. In habit *N.*

varium is compact, and makes a useful plant in a 3-inch pot, though it will not grow much during the winter, and if forcing by extra heat is attempted the result is likely to be an attack of thrips.

N. Richardii multifidum is also a handsome variety, and is of more recent introduction than the preceding. It has long, bipinnate fronds, finely divided and much crested, the color of which is light green. This form also comes true from spores, and consequently is easily multiplied, the young plants when in 3-inch pots being of a useful size for table ferneries.

Still another very distinct and easily grown species is *N. Sieboldii*, probably better known as *Lastrea Sieboldii*, a strong growing fern of bold aspect and nearly hardy. The fronds of this species are pinnate, and composed of from five to nine broad pinnales with slightly serrated edges, the stipes and crown of the plant being covered with brown, chaffy scales. *N. Sieboldii* should be grown in a moderately cool house in order to keep in good condition, for when grown too warm it is liable to become infested with thrips.

N. molle is too well known to need description here, though a useful species for certain purposes; for instance, it is an excellent fern to plant among rock-work when filling a conservatory, and will produce a good result with very little care.

The crested forms of the last named species are very pretty, and may be used with good effect at times, though too brittle to become generally useful.

The most peculiar of these forms is *N. molle corymbiferum*, the fronds of which are upright, quite stiff and terminated by a large crest.

Another of these forms of *N. molle* is *N. m. grandiceps*, in which the fronds retain the outline of the type, while the tip of each pinna is nicely crested in much the same way as those of *N. Richardii* multifidum.

N. molle Langwellii is a comparatively recent form, having been distributed about six years ago, but is, however, of little value commercially.

N. glabella is a finely divided species of dwarf habit and deserves more recognition, the fronds being nearly triangular in outline and from eight to twelve inches in height. This is also a cool-house species and will flourish under the same treatment as *N. Sieboldii*, that is, with a temperature of 50°.

The short list here presented contains some of the most useful species included in this comprehensive genus, but does not by any means exhaust the list. In the present classification what formerly comprised several genera has been combined in the single genus nephrودیum, thus giving it about 300 species.

W. H. TAPLIN.

Holmesburg, Pa.

New Gladioli.

It is known to comparatively few that a new class of gladioli will soon be offered to the public, showing as decided advance over all older kinds of this species as do Crozy's newer cannas surpass the former varieties. Mr. Wm. Falconer in a former number of the *FLORIST*, page 40, September 1, 1889, speaks of these new hybrids. Our illustration here reproduced from *L'illustration Horticole* shows in about two-thirds natural size five new ones from M. Lemoine. The center flower on the right is the Pres. Carnot, and is a type of the new class referred to. Imagine these plants with uniformly strong flower stalks 4 to 5 feet high thickly set with flowers 5 to 6 inches across and with as

NEW GLADIOLI. (TWO-THIRDS NATURAL SIZE).

full a range of color as in the old classes. Such will be shown in the near future. This new race is the result of a cross of the *G. Saundersii* with the old *Gandavensis* type. It is a satisfaction to know that the largest stock of these have been grown in and will be offered to the horticultural world from America. Over eight hundred different seedlings have already been given numbers or named. The value of this class can hardly be overestimated.

Water and Watering.

"A constant and plentiful supply of water is the first essential in gardens," says the *Journal of Horticulture*; "Where gardening is conducted as a means of profit and not a penny is knowingly spent uselessly, large sums are invested in providing a constant and abundant supply of water, in full confidence that this will give a good return on the outlay. With-

out adequate provision in this respect the important work of cultivation could not be profitably conducted, no matter how good the soil and climate or how favorable the position for the disposal of the produce. Much more water is used, as a rule, in commercial establishments, where plants and crops are grown for sale than in private gardens; but though it may appear to be used lavishly in the former it is applied judiciously, or the results

could not be satisfactory. In the application of water to fruit borders many things have to be considered for the avoidance of mistakes—the nature of the soil, drainage, temperature, atmospheric conditions, as well as the state of whatever may be under cultivation—whether recently planted or long established. Tomatoes may be ruined and have been ruined, by saturating the soil too early in the season. One watering given in error may spoil the plants whether they are in pots or planted out, and it is the same with other plants and crops. Overzeal at the commencement of operations in giving water thoughtlessly when there are few roots to imbibe it, is too common. We may respect the motive, but must deplore the want of judgment thus too often apparent; and, conversely, it is sometimes not less apparent later in the season in the opposite direction, when the supplies are inadequate for the needs of plants and crops and the demands of an arid atmosphere. Mr. H. Dunkin communicates sensible remarks on watering, mainly applied to plants in pots, but the principle on which he bases his action governs the whole routine. He writes as follows:—

"When the long looked for sunshine and warm summer days arrived the beneficial influence was quickly and keenly felt on all kinds of vegetation, which spring into active growth with wonderful rapidity. In the case of plants growing in pots, to sustain the large amount of growth recently made and keep the plants still growing on in a satisfactory condition, growers will have to be on the alert and bear well in mind the great changes of atmospheric conditions under which their operations are now conducted, otherwise the great caution which has been necessary in watering plants during the long, dull, wet, spring months will have the effect of allowing the plants to become too dry at the roots before water is given. It is after such great changes from dull cold to tropical weather that the greatest mistakes are made by the inexperienced, and it must be confessed that a thorough knowledge of the quantity of water different classes of plants may well benefit receive in hot weather can only be arrived at by a combination of close observation and well applied reasoning, and among the many operations connected with plant culture I firmly believe proper watering plays the most important part. Even when potted in unsuitable soil judicious watering may do much to secure good results; but pot a plant in soil exactly suited to its requirements and water it with other favorable conditions, yet with all these advantages neglect or carelessness in watering will produce only meagre results. The general tendency seems to be to give too much water in winter and too little in summer. This mistake appears to be brought about by following a regular course of allowing the soil to get into a certain state of dryness before watering, without taking into consideration the immense difference in the amount of evaporation which takes place in the summer time when the days are long, and the amount of light and sunshine produce a light and dry atmosphere which plants cannot withstand without showing signs of distress if the soil in the pots is allowed to become too dry. Another point which must not be overlooked is to find out the conditions of the plants as regards drainage and the amount of roots they have. With good drainage and plenty of root action going on it is really surprising what large quantities of water such things as tomatoes, spiraeas, fuchsias,

chrysanthemums, strong growing ferns, and many other plants require to insure their fullest development. When once plants have been reared to a high state of cultivation the greater is the check which they receive if allowed to become too dry, because the large numbers of active rootlets are so dependent upon a plentiful supply of water that they quickly perish if it is withheld at the critical time. To allow plants which are in a robust condition and well supplied with roots to become as dry before giving water as others more recently potted, or through other causes with less root action, would be to court failure, which would inevitably follow. The one might be greatly benefited by thorough waterings two or three times a day, while the other would not require it oftener than once a day, or in some cases two or three times a week. The practice of rapping pots with the knuckles or a small mallet made for the purpose is doubtless a good one with many classes of plants, such as heaths, carnations, azaleas, and many others, but even then it does not do to depend entirely upon the rapping test, as pots vary so much in the state of their hardness or porosity. In the case of hardwooded plants, however, it is perhaps the best test which can be generally applied, but with the majority of softwooded plants in the summer time those who attend to them regularly can usually tell at a glance by the surface of the soil and the appearance of the foliage whether or not water is required. In the case of strong plants with the soil crammed with roots two or three waterings a day in hot weather is often needed, and at each application enough to thoroughly moisten every particle of the soil should be given; but I have seen instances in which these frequent waterings were carried too far, with the result that the plants suddenly collapsed. Due care, therefore, must be exercised to find out the true condition of the soil. Because a plant required water twice or three yesterday and the day previous that is no reason why it should require as many applications each day. A slight change in the aridity of the atmosphere, the amount of moisture, or the growth determine the necessity for a greater or less supply of water. With plants that require water more than once a day, after the first daily application is given the safe course to follow, if any doubt is entertained about giving the next supply, is to allow the soil to become slightly drier than at the previous watering, and by watching closely the effect this little variation has on the appearance of the plant will be a useful lesson in watering, and a continual succession of these useful lessons must be constantly going on to enable anyone to become an expert in the work, and so changing and varied are the conditions under which watering has to be conducted that even experts, to be generally successful, must be students as well.

Mr. Battles and the Blues.

That's the way of it, always. A man never knows when he's done with anything. I thought I had settled Mr. Battles, but here he pops out again with a gang of Philadelphia clerks from the art stores and the dry goods stores and perhaps the millinery establishments, armed with Emperor William pansies, and jumps one with the war cry, "They are not blue." Well, Mr. Battles and ladies fair, what color are they? It is easier to say what a color is *not* than to say what it is, isn't it?

Now if you blue-eyed girls from the stores will just step one side with Mr. Battles, and let him match your eyes with a bit of ribbon, and take you around to a few art stores, he will discover to you that your eyes are not blue at all nor your hair golden, nor your teeth white nor your lips ruby red nor your complexion like a pearl. And then where will you be? Dear girls, what color are your eyes? Are they "light lavender" or "deep purple" or what intermediate shade? They are "blue," no colors. Mr. Battles has declared that all colors that are not strictly and scientifically blue shall not be called blue. There is no more blue sky; it is gray. The violets are not blue; they are — (what, Mr. Battles?) The bluebells, alas! they are not blue; what are they, Mr. Battles?

There are blues and blues, Mr. Battles, or aren't there? Is there only one blue, and if so, what is it? Where can we see it? Can it indeed be true that there is but one blue and Mr. Battles is its prophet?

To my mind there are blues innumerable, and if a color is nearer to blue than to violet I call it blue, and violet blue or lavender blue, if you will, but still blue. All other colors come in shades, why not blue also? Among the flowers the fact is that the blues lean in almost all cases to the lilacs and violets, the lilacs containing a larger portion of red than the violets. The gentian is the only true blue that I can call to mind at the present. The ageratum is a lilac shade of blue, but place the ageratum flower beside the lilac flower and the ageratum will *appear* blue. Then place your Emperor William pansy flower beside the lilac, and that also will appear blue. The Emperor William pansy beside and among other pansies—all others—in a mass or side by side, will appear blue. It has been noticed again and again by callers with the exclamation: "Look at those blue pansies!"

All color is relative. Not one has a stable, unchanging hue. Each is affected by the color of surrounding objects. A pansy lying on the table will be of one hue of color depending upon the hue of the table, the walls, the sky outside from which comes the light, the composition and thickness of the glass, and a multitude of other things. Out of doors under a green leaf it will be another hue. Scientifically and accurately speaking, "color" as commonly used in speaking and writing does not exist at all in the object to which it is commonly attributed. The flower is not blue, but absorbs all the component rays of light but the blue rays, reflecting those. The lenses in the eyes of those who view the flower may cut out more or less of the blue rays, so that to no two persons will the same flower appear to be of the same color. The study of color as experienced by people who are "color blind," as it is termed, will serve to sorely perplex Mr. Battles. Why some see green when red is reflected and why the green rays are all absorbed by the red object is a problem which may well engage his scientific turn of mind. And, so far as science is concerned, I would advise Mr. Battles to consort rather with artists who are students of color, landscape painters rather than figure painters, than with the clerks of art stores with their "Italian pinks" and "yellow carnations," or the clerks of the dry goods stores with the "elephant's breath" and "crushed strawberry" colors.

Personally I feel it to be a great mistake to attempt to force a scientific scheme of color into floriculture. Flowers of themselves belong in the sphere of poetry, not of science, in so far as they touch and

VASE FILLED WITH ROSES. (ROSA MULTIFLORA).

influence human existence outside of "the trade." It is our privilege as florists to enhance the poetic feeling attaching to flowers, and to spread it rather than to restrict it. We ought to have a color scheme of our own. What could be more delicate and refined than Jacqueminot red, Forget-me-not blue, Tropaeolum yellow, Grace Wilder pink? Let Mr. Battles set himself to this, and let the violets and the sky be blue again.

RICHARD FERRIS.

Vase Filled with Roses (Rosa Multiflora.)

In this illustration, as is generally the case, one of the greatest charms of the arrangement is lost by the absence of color. The vase used was a very delicate blue; the white petals of these miniature roses and the profusion of the yellow stamens made a charming bit of coloring. Flowers could be used in this way on a dining table, mantel-piece or small table in any room.

It will interest many to note the important part that one spray of roses and leaves on the left of the design plays in the arrangement; they connect the flowers lying loose on the table with the ones in the vase, thus making a harmonious whole; without them the entire character would be changed. There would be simply a line of flowers on the table. When flowers are used in this way it is of the greatest importance that they should be arranged at the latest possible moment, so that they will not fade before the entertainment is over. H. H. BATTLES.

The Color Question.

In response to some queries regarding colors, Mr. F. Schuyler Mathews writes: "The buttercup has not a true and pure yellow. It has quite a bit of orange in its composition. Perhaps the common mustard flower possesses as pure a yellow

as it is possible to describe by naming a flower which has an unvarying quality and tone to its color. Dandelions are orangish. The coreopsis is also unreliable and variable in color. What we boys used to call "Butter and Eggs" or "Toad-flax" (*Linaria vulgaris*) possesses a really pure yellow—I mean in the "butter" half. Golden rod is sometimes yellow, but generally orangish. The yellow of the forsythia I consider a pure yellow, but I have seen a bush whose flowers looked a trifle greenish.

"I know of no purely blue wild flower. The 'pure blue,' so-called, of the Fringed Gentian is far off from blue. The forget-me-not is nearest to pure blue.

"The *Cydonia japonica* is near the true pure red, but is a trifle orangish. The wild wintergreen berry I think is an absolutely pure red."

Mr. Mathews has promised to go farther into this matter in an article for the *Florist* and will also accurately describe certain well known flowers, which will, we believe, do much to correct erroneous ideas regarding color, and establish uniformity in color descriptions.

In conversation upon this matter of color several have mentioned the flowers of *Salvia splendens* as exhibiting the primary red. But others claim that this is nearer scarlet. Many have suggested *Delphinium formosum* as the nearest to pure blue that they could think of, though nearly all admitted that the shade was rather darker than their conception of the primary blue. Several others have thought the forget-me-not filled the bill. Nearly all agreed upon the buttercup as possessing the primary yellow, but Mr. Mathews tells us that there is a shade of orange in it.

Truly the color box of nature contains an infinite variety of colors and combinations of colors, and it will take long and patient study to become acquainted with even a fair proportion of

them. But that we can and should become far better acquainted with them than the majority of us now are, all will agree.

Chicago.

No new developments regarding the Horticultural Department of the World's Fair up to Tuesday noon.

All who expect to attend the Toronto convention of the Society of American Florists are requested to report to the secretary of the Florist Club prior to the meeting next Thursday.

There are quite a number of matters to come before the meeting of the Florist Club next Thursday evening. Delegates to the meeting of Florists' Clubs at Toronto will be selected, action will be taken upon certain matters connected with the World's Fair, and other important questions will come up for discussion. And last but not least will be the selection of a bowling team from among those who will attend the Toronto convention, to represent the club in the bowling contest at Toronto.

Among recent visitors to the city were J. G. Heim, Terre Haute, Ind.; J. Young, St. Louis; J. C. Renssion, Sioux City, Ia.; L. Swartling and John Gird, Indianapolis.

The market last week showed more activity than at any time since the beginning of the dull season. The local demand for flowers, especially white, was quite brisk, while the commission men report a fairly good country demand. The quality of stock is fairly good, taking the rose crop all around, and the retailers admit that at this season of the year they never handled better stock. This may be partly due to the extraordinary cool season, but the grower must also be given credit for giving more time and attention to the growing of good stock in the summer. With Beautics at \$8 to \$10 and other roses on the average of \$3 a hundred, the

growers have no reason to find fault. There is but little demand for garden stuff. Gladiolus, choice varieties, go begging at 50 cents a dozen; dahlias and asters are a drug in the market, except white, that can be used for funeral work.

Boston.

Mr. Seth Cole, a well known florist of Gloucester, died on August 1, his 56th birthday.

Mr. Robt. Farquhar's little boy, Walter, died on July 27. Much sympathy is expressed for Mr. Farquhar, who is away from home, he having sailed for Scotland several weeks ago.

President Norton, of the S. A. F. has been at home for several days nursing a sprained leg, which he got while innocently romping with the little Nortons. He hopes to be all right by convention time.

The retail florists close their stores at six p. m. during July and August. Funerals are their only source of revenue at present. Otherwise trade is remarkably quiet, even for midsummer. Pink pond lilies are about the only flower for which there seems to be a steady demand.

An acceptable innovation has been introduced by Supt. Dodge in the planting of the beds in the Public Garden. Many of those which have in former seasons been planted with geraniums, calceolus and similar "bedding plants" are this year filled with palms in variety, variegated hollies, rubbers, yews, etc. The rhododendron and other hardy shrubby beds look uncommonly well this season.

The Saturday show, August 1, at Horticultural Hall was attended by a tremendous throng of people. Wonder how it happens that these weekly exhibitions have become so popular in the past year. "Everybody off to Europe," "people not interested," etc!.

Lilium Wallichianum superbum was exhibited by H. H. Hunnewell and received a certificate of merit.

A seedling gladiolus of the Lemoine section, shown by W. E. Endicott, received honorable mention. A splendid group of acrimenes was shown by Wm. J. Martin, gardener to N. T. Kidder.

The Faxon prize of \$25 for the best display of sweet peas was won by Wm. Patterson. The display of sweet peas was very large, filling a large table the whole length of the hall and the entire front of the stage. H. A. Jones, J. F. C. Hyde, Chas. W. Halstrom, Rose Buxton and Jos. H. White were among the principal exhibitors. The collections of aged herbaceous flowers from N. T. Kidder, J. W. Manning and Temple & Beard were of their usual excellence and attracted much admiration.

The Hub is receiving its usual quota of summer visitors. Among the past week's callers have been Francis Pell, London, Eng.; Jas. Pape, Toronto; Harry Sunderbruch, Cincinnati; E. H. Moses, Bar Harbor, Paul Berkowitz, Philadelphia; and Chas. Knight, Lenox, W. J. S.

Philadelphia.

A very rare blossom has been discovered by Mr. D. R. L. Farson. He was not able to place it, and searched Brother Penman's book in vain. Thinking perhaps it might be a summer flowering annual, he took it to Mr. George Watson, who declared he had never seen anything like it before. It was finally decided to send it to Boston, where it now is awaiting a name. Messrs. Stewart, Welch, and Norton are, we believe, investigating the matter, and may report in time for the convention.

It is reported that one of our large growers of cut flowers and hot-house vegetables, mushrooms, etc., will this fall inaugurate a new way to dispose of his products, his intention being to rent a stall in one of the principal markets and sell at retail for the best prices obtainable. This is a "Capital" idea, as Washington florists do quite a business in this way.

Business the past week has been very quiet. X.

Toronto.

Another enthusiastic meeting (special) of the Gardeners' and Florists' Club was held last night to receive and discuss reports of committees, etc. The entertainment committee's report came in for the lion's share of the discussion and took up the greater part of the evening. Finally the arrangements, with the exception of some minor details, were definitely settled, and perhaps I may say that D. V. and W. P. I don't think that members of the S. A. F. will have anything to complain of when they leave the city. However, perhaps it would be better not to toot one's horn until the 22d of August.

The club also decided to offer a trophy for the winning club at the bowling contest on Thursday afternoon of convention week. The various clubs which intend to compete will kindly make their arrangements accordingly.

My report of the flower show here last week was through press of business necessarily brief. The show certainly deserved a more detailed report. However, as on Thursday afternoon in convention week (with the exception of the bowling contest) the visitors will be allowed to go where they please, I have no doubt that many will avail themselves of the opportunity of seeing what is to be seen in the various conservatories and greenhouses, both trade, public, and private, and will get a better idea of the plants shown than from any description that could be written.

The secretary of the club has received several communications endorsing the delegates' meeting to be held on Tuesday afternoon, and all indications point to the success of the meeting.

Mr. J. H. Dunlop is kept busy locating those who wish to engage hotel accommodations beforehand, and Mr. Thomas Mantion is rushing things in the trade exhibit department, fresh applications for space coming in every day. E.

News Notes.

PAOLA, KANS.—A. Roth has added a new house 16x60.

PETERSBURG, ILL.—W. T. Stephenson is building a new house 50x14.

DAVENPORT, IOWA.—F. G. Bahr is adding two new houses 20x60 each.

CLEVELAND.—Mrs. James Eadie and son left for a trip to Scotland July 18.

OSKALOOSA, IOWA.—The Kemble Floral Co. has added four new houses 20x100 each.

CLEVELAND.—Mrs. E. G. Campbell, the florist, was married to Charles H. Wilson July 29.

BETHLEHEM, PA.—Florist Jacob A. Fries is arranging for the erection of a large new rose house.

GREENVILLE, S. C.—The annual exhibition of the State Horticultural Society will be held here August 13, 14 and 15.

INDIANAPOLIS.—John Gird has started into business at Haughville with one house. He will add several new ones next spring.

BURLINGTON, N. J.—There will be a chrysanthemum show at the new hall of the Women's Christian Temperance Union in November.

LOUISVILLE, KY.—Nauz & Neuner have just completed another greenhouse, 18x100, same to be devoted exclusively to chrysanthemums.

SAN FRANCISCO.—The California State Floral Society at its last meeting prepared a petition to the commissioners of Golden Gate Park, asking that they purchase and turn loose in the park groves a variety of birds of song.

BALTIMORE.—November 10 to 13 inclusive are the dates fixed for the coming chrysanthemum show. The exhibition will be held in the armory of the Fifth Maryland regiment, which hall was secured after many difficulties.

CLEVELAND, O.—A deed was filed with the county recorder July 22 transferring the Glenville greenhouses owned by Agatha B. Long and husband to Robert Addicot and Richard Gamble for \$12,000. A mortgage upon the property for \$11,500 of the purchase price was also filed.

SIoux CITY, IOWA.—Spring trade was very satisfactory. J. C. Remison is building a new house, and will add two more next spring. He is at present in the east looking for points on construction, as he proposes to combine in the new houses every modern improvement.

LOS ANGELES, CAL.—At the meeting of the Southern California Horticultural Society, July 13, Mr. J. C. Harvey contributed a very interesting paper on "Orchids for Amateurs." He named the varieties that were now within the reach of those possessing only moderate means, and gave brief cultural instructions for each class.

GRAND RAPIDS, MICH.—At the annual fair of the Kent County Agricultural Society, to be held here September 14 to 18 next, premiums to the amount of \$222.50 are offered for plants and flowers. Competition is open to all. Copies of the premium list may be had on application to the secretary, Mr. James Cox, Grand Rapids, Mich.

PORTLAND, OREGON.—The Oregon State Horticultural Society held its quarterly meeting at Newburg July 14 and 15. Some very interesting essays were read and discussed. The governor was asked to appoint three commissioners to the World's Columbian Exposition, one each to be appointed by the State Horticultural Society, the State Agricultural Society and the State Board of Commerce. The next meeting will be held at Dallas, October 13 and 14.

ALEXANDRIA, VA.—Business is increasing here. Violets is the principal crop, over 50,000 feet of glass will be devoted to them next winter. J. L. Loose has added eight new iron houses and intends to force some 20,000 clumps of violets. These and four houses of carnations, six of ferns and one (250x30) of La France and American Beauty roses, will form the bulk of his next winter's crop. At his place are to be seen acres of cosmos and early chrysanthemums.

ORANGE, N. J.—Trade here is quiet. Chrysanthemums are doing finely and the prospects are that the exhibition next

November will be the largest and finest show ever held in New York. In Orange and vicinity there are at least 5,000 seedlings being grown and something extra is expected to crop out. T. H. Spaulding is adding two new houses 100x12 each. The fruit crop is immense, the trees breaking down with the weight of fruit.

DETROIT, MICH.—At the Detroit International Fair and Exposition to be held August 25 to September 4, the sum of \$1,271.50 is offered in premiums in the floral department. Of this \$802 is for plants, open to all, \$60 for plants, open to amateurs only, and \$309.50 for cut flowers and floral arrangements. The floral department has been placed in charge of Mr. B. Schroeter, the florist, whose address is corner of Elmwood avenue and Champlain street, and who will supply any information desired and mail premium lists on application.

LOUISVILLE, KY.—Francis Morat's Sons report spring trade as very good with them. Could have sold a good many more bedding plants. Jacob Schulz reports about the same. Mr. Schulz had the finest looking pot plants in the city. F. Walker & Co. had some very nice hydrangeas and sold a great many of them. They are much used here, set in fancy jardinières for porch and doorstep ornaments. Nanz & Neuner report an increase of about 15% in their trade in the last six months. C. W. Keimars has commenced growing orchids, and during the spring showed a good many varieties in his store windows. Geraniums sold this spring at 75 cents, \$1 and \$1.25 per dozen. Mr. Jacob Schulz will meet, nothing preventing, with the florists at Toronto, and Mr. George Morat will very likely accompany him.

KANSAS CITY, MO.—The Western Nurserymen's Association held its semi-annual meeting here July 14. This association, which comprises nurserymen west of the Mississippi river, was organized in this city one year ago. Since then it has met here once, last January. The association now has about forty members. H. D. Kelsey of St. Joseph is president, G. J. Carpenter of Fairbury, Neb., is vice-president and Frank Worcester of Fort Scott, Kas., secretary and treasurer. Notwithstanding the business depression in general trade during the past year throughout the west the nurserymen report a good thriving year's business. Vice-President Carpenter says the nursery business is one business that the McKinley bill has greatly helped. The removal of the duty on sugar greatly increased the demand for fruit trees and the nurserymen have sold half as many again.

Society of American Florists.

Badges for 1891 have been mailed to all whose dues for this year are paid. Members entitled to receive them, but who have failed to, are requested to notify me at once, as the badges have in some instances been lost in the mails.

Those shipping merchandise for display at the trade exhibition, should prepay the freight to Toronto, and thus relieve the Toronto committees of unnecessary work.

WM. J. STEWART, Sec'y.

Our convention supplement will be mailed with next issue. If you want an adv. in its columns, mail copy at once. It must be in hand by the 10th inst. at the very latest.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

XXXI.

Been helping themselves to your flowers, have they? Well, such things are provoking, and I don't blame you for proposing to take pretty stringent measures.

Yes, a child may be arrested for a crime of any kind; by which I mean either a felony under the common law, a misdemeanor, that is an act declared to be a crime by the legislature of a state or for a tort or wrong punished by the civil courts.

These children who helped themselves to your roses were quite young, you say. It will make no difference. A hundred years ago England hung a boy of ten for murder. The only question for the court to determine will be: Was the child old enough to know that it was doing wrong in stealing the flowers. That's all. In this country we have punished children even under seven.

Yes, a child may be arrested for slander, if you just as quickly as a grown person. And there is a very ancient precedent for this. You recollect those youngsters who shouted, "Go up, old bald-head, what happened to thee?"

An old-time maxim of the law says: "The privilege of infancy is a shield, and not a sword." That is to say, no child may make use of his lack of years to wrong a fellow being. Of course, if you can't show that he has intelligence enough to discriminate between right and wrong, then he must be treated as a lunatic, and put under restraint.

As you are well aware, infancy in the eye of the law lasts until the child is twenty-one years of age and by a strange process of reasoning a person becomes of age on the day before he is twenty-one.

This is what is known as one of the curiosities of the law.

Now let me say that the law takes no note of the sub-division of a day, hence if we assume that a person is of age on the first minute of his twenty-first birthday, it follows that he is of age on the last minute of the day before, and consequently, as the law refuses to chop up a day, on the first minute of the day before, he is twenty-one. Quite true, we might by pressing this style of reasoning to a logical conclusion, prove that a person is of full age the minute he is born.

But infants have some rights that the law is bound to respect. For instance, a lad over eighteen may legally enlist in the army or navy; if you arrest him for a crime and he signs his bail bond, it may be enforced against him; a boy over fourteen and a girl over twelve may legally enter into a marriage contract without the consent of their parents or guardians. If two infants marry under these ages the marriage would become valid if they afterwards lived together.

An infant, like a married woman, must have the necessities of life and any merchant supplying him could collect the amount either out of the infant's estate or his parents' estate. What necessities are? Well, his board and lodging, his education and care when taken ill, his clothing, but I must confess that flowers would hardly be adjudged a necessary for a young man or woman.

Some dealers have a notion that if they can only secure a written acknowledgment of a debt from an infant it will be binding upon him when he becomes of age. This is quite erroneous. To bind himself for anything not a necessary the

infant must after becoming of age absolutely promise to pay it; all promises made before, no matter whether under seal or not are not worth the paper on which they are written except as refreshers upon the boy's conscience. For this reason when you sell a bill of posies to a young man get his written acknowledgment in some shape or other.

Now the law is really very strict with an infant, although most people think it is not. For instance, if a boy should acquire some property on credit and after he becomes of age should attempt to sell or dispose of it the law would oblige him to pay up the original obligation. So too a boy may lease a building and it would not be binding upon him unless after he becomes of age he should do some act of confirmation, such as collecting the rent. That instant it would become binding upon him.

Now, if a young man should enter your place and order a bill of goods and you thinking him to be of full age deliver them, then in that case, while you might not be able to collect the amount, you could, if you could find the goods, "replevy" them, as we call it. That is, in plain language, by process of law re-possess yourself of them. If the young man should get the flowers by representing himself to be of full age, it would be deceit and he would be liable to arrest, provided always that his youthful appearance did not put you on your inquiry.

No, that may not be done: it would be glaringly wrong for the law to allow an infant to get goods for cash, use them up, and then sue for his money again.

In most states an infant may make a will of personal property, when over eighteen if a boy and sixteen if a woman. But while an infant may take the title to real property, he cannot sell or mortgage until of full age. This must be done by order of the court after full investigation to see if he be just to the infant. Hence estates are often "tied up," as we call it, until some person becomes of full age. You may sue a child, or a child may sue you. This is simply done by appointing a guardian, who conducts the suit for or defends the suit against the child.

A child may be a witness in any kind of law-suit. The old rule was seven years of age, but now it is solely a question of intelligence.

Infants may not be sent to state prisons; they are usually sent to reformatories of some kind. Before asking for a warrant against an infant, always try to make a satisfactory settlement with the parents. Argue with thine adversary quietly, saith the good book. In a few years your children will be old enough to annoy your neighbors, and although I agree with you that they are the best children in the world, yet these delicate human plants often change in a night.

UNCLE BLACKSTONE.

POSTAGE STAMPS should not be used for mailing remittances by mail when any other means can be employed, but when they are used a piece of wax paper should be placed between the glue surfaces, or they are very apt to adhere together and thus become nearly worthless. Nearly every florist has wax paper about the place, so this means of insuring the delivery of the stamps in good condition is right at hand.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser in these columns.

This is the last call for advertisements in the convention supplement.

November —, San Francisco.—Chrysanthemum show California State Floral Society. Emory E. Smith, Sec'y, 321 Market St.

THIS ISSUE completes volume 6 of the AMERICAN FLORIST and with it we send the annual index. With the index the bound numbers for the year make a very valuable book for reference, and any who do not already save the numbers for this purpose are losing much of the value of the paper. For the convenience of our readers we supply a handy binder, in which the numbers can be placed as

received and thus preserved in good condition until the last number of the volume is received, including the index. The volume is then complete and reference may be quickly made to any matter that has appeared during the year, which would otherwise necessitate a long and tedious search to find. The price of these binders is only 75 cents each. They are strong, serviceable, of attractive appearance and the name of the paper is lettered in gilt on one cover. Every reader ought to have one, and as a new volume begins with next issue now is a good time to start.

YOU HAVE RECEIVED an order from an unknown party, unaccompanied by a remittance and you must fill the order at once or lose the sale. Well, lose the sale! Write the party a letter like the following: "Dear Sir:—We have your favor of the — inst. with order for 300 roses of named varieties from 2-inch pots. As no remittance or reference accompanies the order and as we have not before had the pleasure of any business dealings with you and are without any means of obtaining quick information as to your responsibility, we must ask for cash before shipping this order. We should also be pleased to have you name references at same time, that we may be enabled to place ourselves in a position to extend the usual credit in the future should you see fit to favor us with any further orders, which we hope you will. Very truly yours,
ROE & DOE."

MR. J. T. JAMES, Park Ridge, Ill., sends us a large bunch of flowers of his sweet pea, Nellie James. They are the finest lot of sweet pea flowers we have ever seen; large, beautifully colored, and on long, stout stems. It is not surprising that such flowers always find a market.

SOON we'll be off for our annual reunion, exchange of experiences and observations and freshening up for another year's work. Old acquaintances to be renewed, new ones formed, to give and receive the benefit of knowledge acquired, and all in a hearty thoroughly enjoyable way.

SEVERAL THOUSAND subscriptions expire with this issue. Please renew promptly and thereby confer a favor on the publishers. The date at which your subscription expires is noted on the address label attached to each copy you receive, or to the wrapper in which it is mailed.

FLOWERS from a sport of the "Duchess de Brabant" rose have been sent us by Victor Johnson, Pueblo, Colo. The blooms are much larger and fuller than those of the "Duchess," and of a lighter color. Mr. J. says that it is also a stronger grower.

ADVERTISEMENTS for the convention supplement must be received at this office by next Monday at the very latest to insure insertion.

HAVE you decided to attend the Toronto convention? If not, make up your mind now to go, and you will not regret your decision.

WE HAVE a really good map of the central part of the city of Toronto, which will appear in our convention supplement.

W. J. B.—We cannot print questions regarding small fruit culture, as that is outside of the special field of this journal.

VOLUME 6 is complete with this issue. As will be noted the volume contains over 1,000 pages. Quite a book for \$1.

E. H. HUNT, WHOLESALE FLORIST

The Good Trade.

AM. SEED TRADE ASSOCIATION.

F. BARTLETT, Lawrence, Kan., president; A. L. Post, New York, secretary and treasurer. The tenth annual meeting at Hartford, Conn., second Tuesday in June, 1892. Applications for membership should be addressed to Wm. Meggatt, chairman membership committee, Wethersfield, Conn.

ANOTHER MODEST MAN.

The modesty of the seedman is almost proverbial; here is a Rockford, Ill., sample from the *Mirror*, of that city, regarding a new government building at that place:

In an interview with R. H. Shawway, the well known seedman, who is a very profitable partner of Uncle Sam's postal system, our reporter gleaned the following as indicative of where he thought the new government building should go. He said:

"I have spent some time to-day in consultation with Colonel Lawler and Governor Ingalls. A very in regard to the location of the public building. Being the largest patron of the government in Rockford, it was on the proper and fit manner that they should consult with me on that matter."

"The weight of my mail matter sent through the office is fully 75,000 pounds per year, on which I pay 8 cents per pound, amounting to \$6,000 per year, which is required to be paid annually, besides receiving mail matter that has paid \$3,000 in postage. I also paid the government last year \$1,000 in import duties; so you see, as I said, it is only proper that they should have my views on the subject, as the total amount the government receives from my business amounts to \$10,000."

"In the first place, taking a purely business view of it, the building should be located on the east side. I own property on both sides of the river, and as far as enhancing the value of my property goes I had as soon see it built on the west as on the east side. But for the convenience of my own large business, which in the busy season amounts to the receipt of over 2,000 letters per day, necessitates a special delivery, I want to make one load of it and deliver once a day, for this reason, I say, and also for the convenience of my office in delivering it. I think the building should go on the east side. I will say also that I present daily to the postoffice for delivery to my office orders and pay bills for payment, which necessitates considerable travel to go with them to the west side."

W. R. BISHOP, of Burlington, N. J., has assigned.

BEAN AND ONION seed crops in central eastern Michigan are reported fair.

ALWAYS mention the AMERICAN FLORIST when writing to advertisers.

CONVENTIONS supplement advertisements must be received by next Monday at the latest to be sure of insertion.

Butted Glass.

I am thankful for the article on butted glass on page 974. I am building a house, and was intending to butt the glass—was to commence glazing next week. The words, "If you are in doubt as to it, don't do it," settled the doubt for me and will not butt the glass. Let us hear more about it.

Petersburg, Ill. W. T. STEPHENSON.

WE HAVE received from the Herendean Manufacturing Co., Geneva, N. Y., a copy of their new book on greenhouse heating by steam and hot water. It contains much useful information on the subject of greenhouse heating, and includes several very handy tables showing the number of feet of pipe required to heat a given cubic space to a stated temperature under varying conditions. There are also some very useful instructions in piping the houses for either steam or hot water. The book is sent free on application to the address above given.

JOHN RECK, Bridgeport, Conn.

PANSIES.

PANSIES THAT ARE UP. No need to worry over getting the seed to come up, it is up and ready to plant when I send them.

It is not only the plants that are up, the strain is up also; up to, and a goodly number of my customers say, above any strain in the market. The price is down, considering the quality of the strain, seed as good would cost you about as much per 1000 plants. My price is \$5.00 per 1000, or in lots of 2,500 and over, \$4.50 per 1000.

SEND FOR LIST AND SHORT PAPER ON CULTURE.

PLANTS READY AUGUST 20th TO DECEMBER 1st.

SMILAX.

Plants ready July 1st and later. These will be nice and stocky, and ready to go right ahead. There is some 40,000 here; let me have a chance to fill your order.

Send 10 cents for samples and get my prices before ordering elsewhere.

EXTRA PANSY SEED.

Mammoth Sunbeam Strain.

One of the finest and most perfect strains of Mammoth Pansies, extra large extra large extra large of fine form and showy colors. I have obtained this grand strain by high culture and careful selection, and have one of the choicest collections that can be procured. I receive very complimentary letters from my customers of last season. Every florist should sow of it. Per liberal trade pkt. 25c.; 3 pkts. 60c.; 5 pkts. \$1.00.

JOHN F. RUFF, Shiremanstown, Pa.

GARDINER'S SUPERB CHINESE PRIMULAS.

The Chinese Primula has long been a favorite florist's flower, and it has never been seen in greater perfection than now—some very rare and remarkable varieties having been produced within the past few years. Our strain is from a celebrated European specialist, and is acknowledged to be superior to all other strains now on the market. The many flattering testimonials we have received warrant us in recommending this strain very highly.

ADDRESS E. B. JENNINGS, Pansy Grower,
Box 75. SOUTHPORT, CONN.

Postage on Dried Plants and Cut Flowers.

Under date of April 23, the third assistant postmaster general, Madison Davis, sent out the following ruling, informing postmasters and the public "that the act of Congress of July 24, 1888, reducing the rate of postage to 1 cent for every two ounces or fraction thereof on seeds, plants, bulbs, roots and scions" does "not apply either to dried plants or cut flowers. These are still subject to postage at the rate of a cent an ounce." (See U. S. Postal Guide, xiii., 27, for May, 1891.) This ruling should be modified, as the act was, if I am not mistaken, intended directly to benefit botanists in the exchange of botanical specimens, which as dried plants are now excluded from this rate. The botanist of the U. S. department of agriculture has had printed on letter heads that herbarium specimens could be sent at 1 cent for two ounces. The intention of the ruling was to debar the sending of drugs and other merchandise at that rate. The discrimination against cut flowers is also unjust and the ruling could perhaps be changed if those interested would take action in the matter. C. R. ORCUTT.

Fuchsias.

Is there any way by which fuchsias can be kept in a dormant state through the winter without special care or trouble? If cut back well and leaves all removed, will they keep without ventilation in a cellar until time to bring them forward for growing up for spring sales, and if so, at what time should they be brought into the greenhouse to be ready to sell during the last half of May? Wm. F. BASSETT.

If you have anything to sell to florists don't fail to place an adv. in our convenient supplement, to be published with our next issue.

YOU DON'T HAVE TO BUY A PIG IN A BAG.

Packing Plants for Shipment.

In packing plants for shipment in warm weather, I think there is no better way than, after wrapping separate in paper, to place them upright in the box, pressing them so tightly together that there is no chance for them to move. If packed so loosely that one starts to move the whole lot will soon change place and cause much damage. More than one layer can be packed in the same box by putting in a false bottom at the proper height, if the box is made deep enough. Do not nail a solid cover over the top. A few strong slats are sufficient, placing so far apart that the expressman can readily see the contents and understand the necessity of keeping the box right side up. A good idea is to attach to the box some sort of handles to lift it by. This assists materially in insuring it against being turned wrong side up. S.

Hope to see the question of packing plants for shipment well stirred up. Some shippers pack plants as though they were potatoes or corn in the cob. The uncertainty in the mind of the possible buyer as to the condition in which the plants would be received has kept many from ordering that would otherwise have been glad to have certain stock advertised. The great majority of shippers don't pack snug enough. As a result the first rough handling (and they are bound to get it) starts one loose. This lets the rest roll around, and then havoc begins. If the shippers could open some of the boxes they nail up they would see the point and understand the necessity of using the utmost care in packing. That is, if they want to satisfy their customers and invite further orders. A.

SEND in your adv. now for the convention supplement which we shall publish with our issue for August 13.

AHEAD OF EVERYTHING.

We Follow None, Prize or No Prize.

Our latest improvements in machinery produce a Standard Pot which for lightness, smoothness and durability, has never been equaled. Customers buying of us will

SAVE ONE-THIRD IN FREIGHT.

And to prove this, we give below a table showing number in Crate and **WEIGHT** of same, which speaks for itself:

Size.	No. in Crate.	Weight.
1 1/4 inch.....	3,000	250 lbs.
2 1/4 ".....	2,400	200 "
2 3/4 ".....	1,750	150 "
3 ".....	1,450	120 "
3 1/2 ".....	1,250	100 "
4 ".....	800	60 "
4 1/2 ".....	600	45 "

It will be seen at a glance, that our pots are one third lighter than formerly, and yet we claim that owing to the superior quality of our clay and improved machinery, they are stronger than any pot in the market, and we frankly ask you to make the test. **SEND FOR PRICES.**

The Bowling Contest at Toronto.

At the request of the Toronto members Mr. John N. May, Summit, N. J., will act as manager of the bowling contest at the convention. The Toronto Clubs offer a fine cup for competition. Clubs which will compete should notify Mr. May as soon as possible and address him for information regarding rules, etc.

Will you be with us at Toronto? You will miss it if you stay away.

PLEASE SEND us a report of your spring plant trade as compared with past seasons.

Mr. A. DIMMOCK writes from England announcing his safe arrival. He was among the unfortunates on the steamship Servia.

A PHILADELPHIA paper tells of a dahlia grown by an amateur in that city that has attained a height of 8 feet and 1 inch, is full of flowers and still growing.

A C. O. D. package of cut flowers, on which there was \$2.50 to collect, recently failed of acceptance by E. Kelly, Duluth, Minn., he giving as an excuse that he did not have the cash with which to pay the bill.

THE SAN FRANCISCO Argonaut says that electric light has been employed advantageously on board a West Indian steamer crossing the ocean to keep alive and flourishing certain plants which were being transported for acclimatization.
